

HIGH QUALITY SOLUTION FOR FASTENING LOG HOMES

Eurotec®

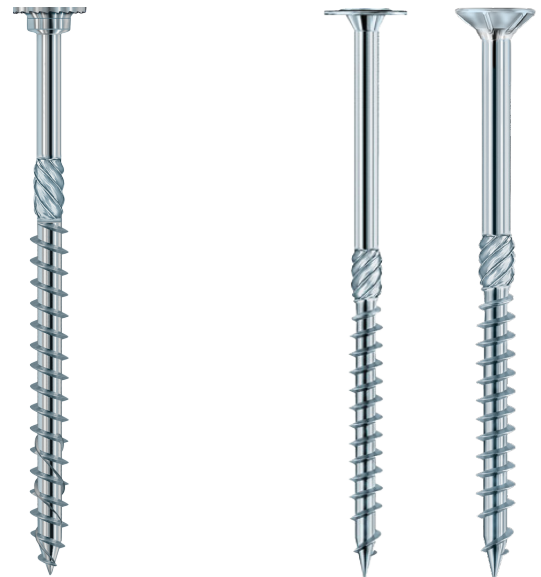

Our screws have many **advantages** which make them the perfect solution for fastening logs and wood in **log home construction**.

The special geometry of the **screw tip AG** brings about a reduction of the screwing torque and in addition leads to a **lower splitting effect** when screwing in the screw.

Furthermore, the **TX-drive** prevents them from knocking when screwed in. The ability of absorbing **high tensile, shearing and pull-out forces** also has been certificated by the European Technical Assessment **ETA-11/0024**.

SAWTEC

- Faster and easier screwing-in due to the DAG tip
- Reduced splitting effect
- The saw teeth underneath the head reduces chipping
- Applicable in service classes 1 and 2
- Corrosion resistant

PANELTWISTEC AG

- Lower splitting effect
- Resistant to mechanical loading
- No knocking of the screws when screwing in with a TX-drive
- Applicable in service classes 1 and 2
- Corrosion resistant
