

CANTILEVER HYDRAULIC BOAT LIFT

on the DOCKS

Boat Lifts • Dock Repairs • Accessories

Cantilever Hydraulic Boat Lift: Water depths of 4 to 7 feet are ideal applications for freestanding hydraulic boat lifts. Fast lift speeds, quick installations, and battery operated DC power systems make these lift ideal for both existing docks and new construction. The self contained systems can also be relocated when moving to a new property.

- 1 Freestanding hydraulic lifts sit on the lake bottom in depths of 4 to 7 feet.
- 2 Fast lift speeds compared to cable lifts and includes a remote control.
- 3 Standard lift capacities from 2,000 to 10,000 pounds.
- 4 Self contained lift system can be relocated to a new property.
- 5 12v or 24v DC power pack charged with solar panel or 110v AC charger from shore power.
- 6 Deep water applications require additional framing supported from the dock structure.
- 7 Standard lift configured for a V hull boat. Tritoon lift kit is optional.
- 8 Hydraulic power unit can be mounted overhead or inside a storage closet.
- 9 Optional platform can be used for PWC's or other small water craft (not applicable for boats)
- 10 Optional guide posts and bow stops to make loading easier.
