

COMPOSITE STRUCTURAL LUMBER & DECKING

on the DOCKS

Boat Lifts • Dock Repairs • Accessories

Reinforced Composite Lumber: Tangent composite lumber is a non-organic, fiber reinforced, structural product. Common uses include decks, marine docks, playground equipment, fencing and landscaping applications.

- 1 Composite lumber is warranted against rot, fungal decay and splintering.
- 2 Common tools and fasteners - No special tools required for installation.
- 3 Standard lumber sizes stocked in Kingsland include 2x6, 2x8, 2x10, 2x12 and 4x4 in black.
- 4 Special order sizes in common dimensions up to 12" x 16" beams available.
- 5 Contains UV inhibitors and strengthening fibers to maintain aesthetics and durability for decades.

Endeck PVC Decking - Capped cellular decking is made of 100% pvc with no organic fillers to rot or decompose. Endeck is made for the water! Deep embossing provides a surface with excellent traction wet or dry and stays cooler than similar composite materials. Lightweight and easy to install with a variety of fasteners.

- 1 Impervious to water and **will not rot.**
- 2 All Endeck boards are dual sided and reversible.
- 3 30 Year limited fade and stain warranty.
- 4 Works with multiple fastening systems include Camo and Starborn Pro Plug System.
- 5 Because Endeck is 100% PVC, it is recyclable unlike composites or wood.
