

CHILDTRAC

Network configuration

The sim card configuration and network connection for your watch has been done already, there is nothing here for you to do.

If you change anything in this settings, we cannot guarantee that the watch will work correctly.

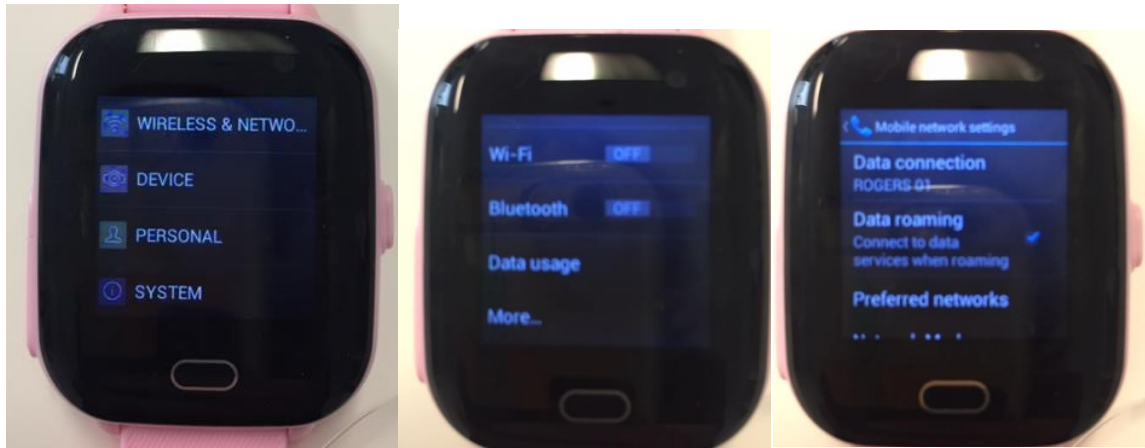

Note: Wifi and Bluetooth are set at off as this watch is working on mobile network and if this is activated it will use up more battery.

The correct settings for the watch if a Rogers sim card has been selected from our tech team. If ever the setting were changed.

1)Go in Wireless & Settings

2)go in More...

3)Data roaming must be enabled

4) Go down, and go in Access Point Name

5) The selected name for our sim is M2Minternet.apn
