# Phytonutrients and Color

## WHAT ARE PHYTONUTRIENTS?

Phytonutrients are natural, plant-derived compounds that support life and offer protection – innately in plants but for plant-eating humans as well. For example, a 2014 meta-analysis found that the more vegetables eaten, the lower the risk of all-cause mortality (Wang 2014).

## WHY CARE ABOUT PHYTONUTRIENTS?

The human body needs phytonutrients in a different way than it needs nutrients like protein, vitamins, and minerals. Phytonutrients are uniquely able to satisfy free radicals circulating in the body looking for electrons. By providing electrons, phytonutrients prevent free radicals from taking electrons from proteins or other nutrients, a “theft” that leads to oxidative stress.

## HOW ARE PHYTONUTRIENTS AND FOOD COLOR CONNECTED?

Different plant colors are associated with the beneficial protection of phytonutrients, and encouraging diversity of plant-based colors in a given meal can be a great method for improving diet choices.

## **WHAT HEALTH BENEFITS DO PHYTONUTRIENTS AND COLOR PROVIDE?**

The colors of food have long been associated with improving health conditions. Green foods help improve diabetes and immunity, protect against cancer, and enhance gene expression. Red foods align with the cardiovascular system by protecting the heart and blood vessels. Red is also responsible for building muscle mass and skin protection. White foods, even though not as ‘colorful’, still yield a tremendous amount of immune system support by decreasing allergies, reducing inflammation, helping to maintain weight, and lowering cholesterol. Purple improves memory, protects again cancer, improves the gut, and keeps a healthy heart. Yellow or orange foods additionally protect the gut, protect our eyes and skin, fight cancer, and improve immunity.

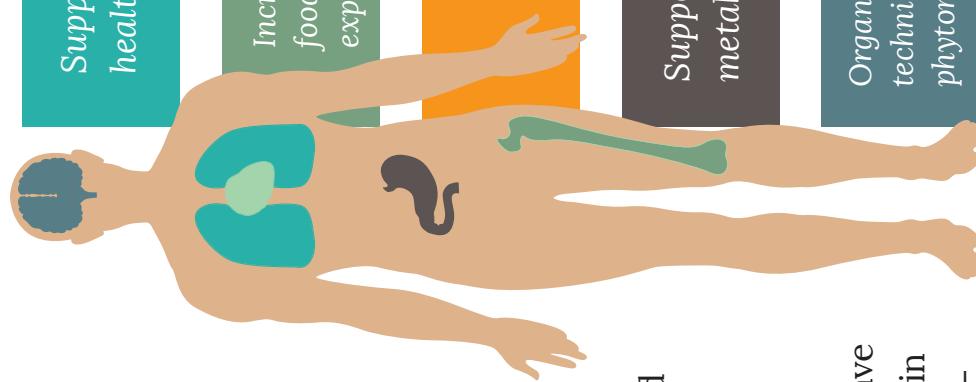

<b>MAJOR PHYTONUTRIENTS</b>	<b>POTENTIAL HEALTH ASSOCIATIONS</b>
Flavones	Additive nutraceutical support via anti-inflammatory response and antimicrobial benefits; potential support of healthy metabolic function
Lignans	Soluble and insoluble fiber help support the immune system; often an antioxidant role and help with balancing metabolic and hormonal systems
Avenanthramides	Bitter characteristics that can influence select cell transporters in the gut modulating glucose response and appearance
Quercetin	Reduction in inflammatory responses for a wide range of health issues
Catechins	Maintain metabolic processes; improved wellness associated with longevity and cardiovascular health
Ellagic Acid	Can play a role in antioxidant and anti-mutagenic response considered health protective
Stilbenes	Anti-inflammatory response with benefits supporting longevity
Curcumin	Antioxidant and immune modulator affecting initiation of inflammation response; associated with digestive health, cardiovascular and metabolic systems functional repair
Myrosinase	Helps convert select compounds to active healthy forms of metabolites
Phenolic acids/Polyphenols	Antioxidant activity promoting systems important to vascular health
Glucosinolates	Shown to support cardiovascular system and detoxification processes with antioxidant activity
Carotenoids	Antioxidant process support; reduced risk of macular degeneration
Chlorophyll	Anti-inflammatory-like responses, antioxidant, and anti-bacterial activity

## **WHAT IS GAE? A WAY TO CAPTURE TOTAL PHENOLICS**

Scientists can quantify “total phenolics” between different plants by measuring Gallic Acid Equivalence (GAE), which can be used to compare the amounts of phytonutrients and the total phenolic compound content of different foods. Phenolics are a group of phytonutrients that include phenolic acids, stilbenes, flavonoids, and condensed tannins. Phenolics are universally present in plant-derived foods and have been long-linked to the health properties of a plant-based diet.

## **The Whole Food Advantage**

## **WHAT IS THE WHOLE FOOD ADVANTAGE?**

The idea of the “whole food advantage” describes the concept that bioactive phytonutrients consumed from whole foods produce stronger health benefits than when the phytonutrient is isolated and consumed alone (Lila and Raskin 2005, Lila 2007). This idea also includes the notion that some phytonutrients in foods have a synergistic effect when eaten together. Plants have a predominant color that we see, but they also have additional phytonutrients associated with colors seen in other plants. This is part of the whole food advantage – multiple phytonutrients associated with multiple health benefits in just one plant.

*Supports balance immune modulation for healthy inflammation response.*

*Increased intake of vegetables and fruits in whole food nutrition influences individual epigenetic expression of our health potential.*

*Benefits of nutrients food matrix enhances bioavailability by up to 60%.*

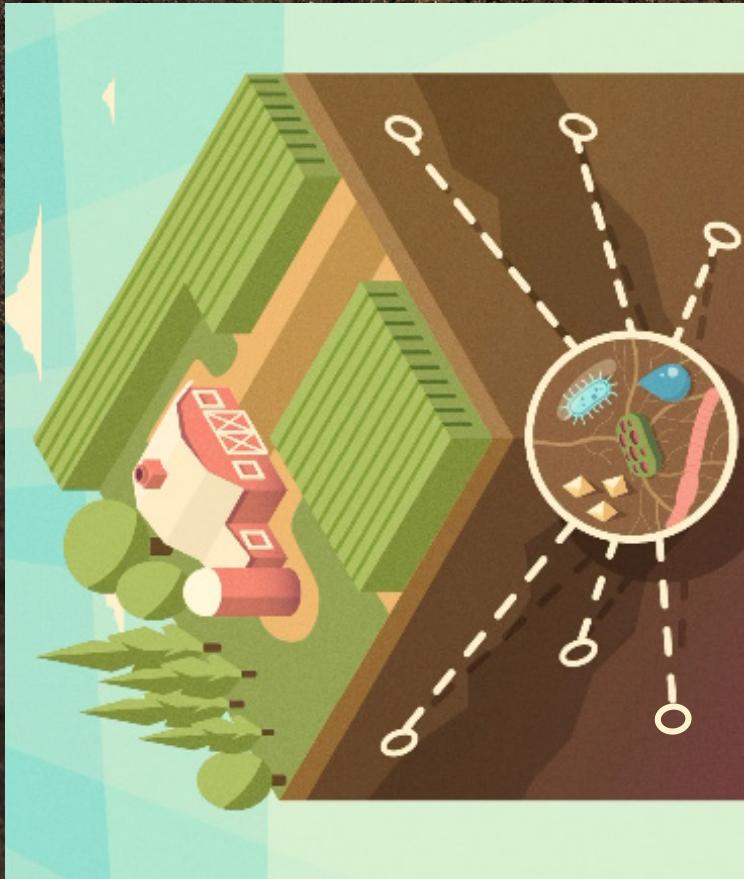

*Supports the gut microflora and a healthy metabolic fingerprint of the gut.*

*Organic and adaptive regenerative farming techniques delivers nutrient dense source of key phytonutrients and helps balance healthy lifestyles.*

# Organic and Sustainable Farming

## HOW DOES ORGANIC AND SUSTAINABLE FARMING PLAY A ROLE?

Organic and sustainable farms start with a foundation of healthy soil. Healthy soil contains rich biodiversity such as bacteria, fungi, minerals, and other organic matter. This biodiversity promotes water retention, erosion resistance, and yields more nutrient-dense crops.

# Specialty Crops

## WHAT ARE SPECIALTY CROPS?

The U.S. Department of Agriculture's (USDA) Specialty Crop Block Grant Program (SCBGP) defines "specialty crops" as fruits, vegetables, tree nuts, dried fruits, horticulture, and nursery crops. However, the USDA differentiates specialty crops from federally supported commodity crops like grains, corn, soybeans, cotton, rice, and barley.

**Reference:** "What is a Specialty Crop?" United States Department of Agriculture Agricultural Marketing Service, <https://www.ams.usda.gov/services/grants/scbqp/specialty-crop>.

Less than one percent of the 2014 Farm Bill funded allocations (about \$956 billion over 10 years) went to supporting farms growing specialty crops, while five percent of the Bill went to supporting commodity programs. This funding largely aimed to protect commodity crop farms from changing prices in products like corn, wheat, soybean, and dairy.

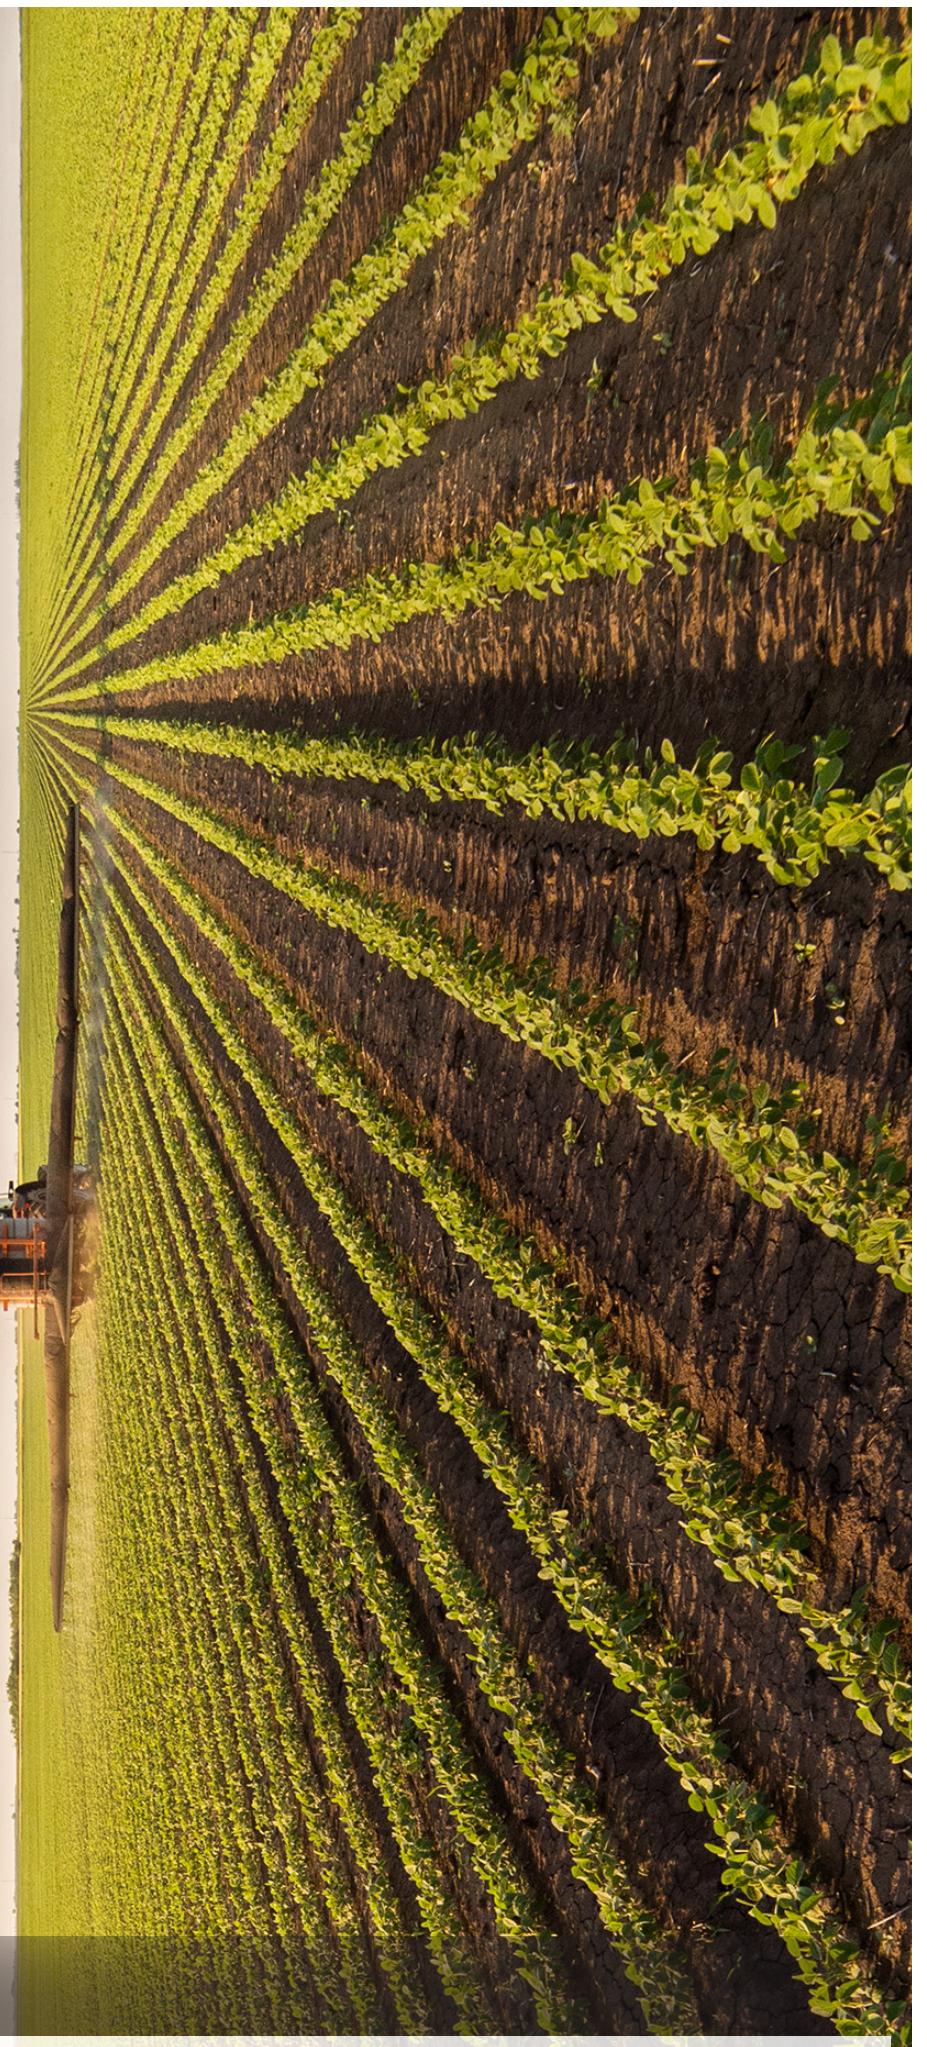

**Reference:** "The \$956 billion farm bill, in one graph." Brad Plumer, The Washington Post, January 29, 2014. [https://www.washingtonpost.com/news/wonk/wp/2014/01/28/the-950-billion-farm-bill-in-one-chart/?utm\\_term=.ddeaf5514a7](https://www.washingtonpost.com/news/wonk/wp/2014/01/28/the-950-billion-farm-bill-in-one-chart/?utm_term=.ddeaf5514a7).

## Farm Bill

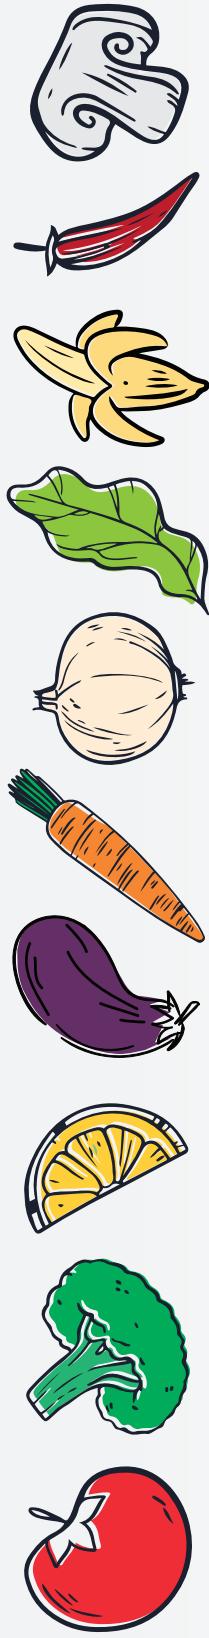

## WHAT IS THE FARM BILL?

The Agriculture Improvement Act of 2018 – AKA the 'Farm Bill' – was signed into law on December 20, 2018. This Act is part of the legal framework for agricultural policy that is reconsidered every five years. Considerations include farming, nutrition, conservation, rural development, research, and energy.

USDA ERS - Food Environment Atlas, United States Department of Agriculture Economic Research Service, March 19, 2018, [www.ers.usda.gov/agricultural-act-of-2014-highlights-and-implications/](http://www.ers.usda.gov/agricultural-act-of-2014-highlights-and-implications/).

# Phytonutrient Gap

**10** servings of fruits and vegetables per day can add years to your life.

## 3 - 12%

Only 3-12% of Americans meet fruit and vegetable intake recommendations<sup>8,9</sup>.

The biggest gap is the **blue/purple** fruit and vegetable group, with only **12%** of people meeting the median intake of those phytonutrients.

8 out of 10 Americans have some sort of gap in phytonutrient intake<sup>8,9</sup>.

While the number of Americans consuming **green** fruits and vegetables is slightly higher, the percentage is still under **30%** of the recommended intake<sup>8,9</sup>.

# Nutrient Gap

## 5 SHORTFALL NUTRIENTS

These 5 nutrients fall short in Americans and are of public health concern<sup>10,11</sup>.

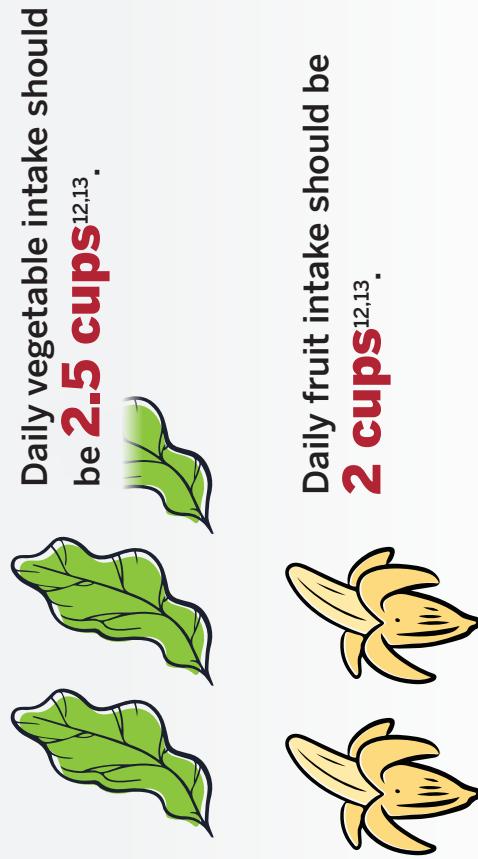

Potatoes account for more than **25%** of all vegetable consumption<sup>12,13</sup>.

More than **80%** do not eat enough green vegetables<sup>12,13</sup>.

More than **90%** do not eat enough orange and red vegetables<sup>12,13</sup>.

# Green

## Foods

Alfalfa	Chard	Peas	Chickpeas
Barley Grass	Collard Greens	Turnip Greens	Cinnamon
Broccoli	Kale	Spinach	Cloves
Brussel Sprouts	Kalette	Black Eyed Peas	Hemp
Cabbage	Lettuce		Sorghum

## Phytonutrients:

**Chlorophyll**

**Lutein & Zeaxanthin**

**Isoflavones**

**Isothiocyanates**

**Phytocannabinoids**

**Myrosinase**

# Black

## Foods

Alfalfa	Barley	Chickpeas	Oats
Black Beans	Black Eyed Peas	Cinnamon	Spanish Black
Brussel Sprouts	Black Eyed Peas	Cloves	Radish
Cabbage		Hemp	Sorghum

## Phytonutrients:

**Tannins**

**Saponins**

**Phytocannabinoids**

# White

# Yellow/Orange

## Foods

Apples  
Barley  
Beetroot  
Buckwheat Seed  
Garlic  
Mushrooms  
Oat  
Onion  
Radish  
Tofu  
Watercress

## Phytonutrients:

**Phenolic Acids**  
**Flavanols**  
**Alliin**  
**Compounds**

## Phytonutrients:

**Beta Carotene**  
**Beta Cryptoxanthin**  
**Betaxanthins**  
**Flavones**  
**Curcumin**  
**Bromelain**  
**Flavanones**

## Foods

Carrots  
Citrus Fruit  
Lemons  
Oranges  
Peppers  
Pineapple  
Sweet Potato  
Turmeric

Winter Squash  
Yellow Squash

## Purple

## Red

### Foods

Acai	Cranberries	Red Cabbage
Aronia Berry	Currants	Red Wine
Blueberries	Eggplant	Whole Buckwheat
Cherries	Elderberry	Plant

### Foods

Beets	Pink Grapefruit	Swiss Chard
Cherries	Pomegranates	Tomatoes
Chilies	Raspberries	Watermelon
Peppers	Strawberries	

### Phytonutrients:

**Anthocyanidins**

**Procyanidins**

**Stilbenes**

**Resveratrol**

### Phytonutrients:

**Lycopene**

**Nitrate**

**Betacyanins**

**Ellagic Acid**

**Capsaicin**

# Brown

## About the Series

### Foods

Apricot	Green Banana	Potato
Beans	Lentils	Rye
Cocoa	Mushrooms	Tea
Figs	Nuts	
Flaxseed	Oats	

### COLOR OF FOOD SERIES

This overview booklet is just one part of a multi-faceted series on the Color of Food. Understanding the significance of phytonutrient and nutrient gaps, the GAE connection, the whole food advantage, and the role of specialty crops and the Farm Bill provides the tools needed to make conscious decisions about our health and the health of the people around us.

### Phytonutrients:

#### Lignans

#### Beta Glucans

#### Theobromine

#### Resistant Starch

#### Other Fibers

Please check out other items in the Color of Food Series:

- *Featured Crops: Nutrient and Phytonutrient Profiles*
- *Adopting Nutritional Practices*
- *Fruits and Vegetables*

*We are dedicated to advancing the latest insights and information available in nutrition therapy and clinical nutrition and to presenting only the most balanced, credible, and reliable clinical nutrition and science available.*
