**Subject:** Calcium Conspiracy Part 2

Our cycle of disease and death escalates.

As we become more acidic, all biological processes struggle and our overall pH/acidic levels are lowered. As our overall pH Levels go below 7, Cancer Cells are allowed to divide and Tumors can start to grow easier. All of these concept center around Calcium, as Calcium is the main mineral that really helps to keep our overall pH balance in check.

As, Calcium levels are lowered by our intake of Acidic Food Preservative, Acidic Toxins being secreted from different pathogens and/or Parasites, and/or even decomposing Pathogen and Parasites. Therefore, as these Calcium levels are lowered, especially if you have used them up, many people should be taking larger amounts of the Calcium as a Supplement, so that the Bones are not surrendering it, as the body has a way of making these kind of priorities.

I discovered that some of my Liquid Minerals were 100% non-toxic no matter how much of it was consumed. I named these four Minerals that I used for this purpose as NTSS Agents (Nontoxic Saturation Safe). A mineral that is a good agent under this NTSS concept, also would have the ability to travel everywhere through the entire body system, where there is liquid/water; and this would include the Blood and the complete Lymph System. In summary here, the NTSS Agent should be able to travel everywhere and be found in your Spit, Sweat, Tear Drops, Uren and should even be secreted directly into the Lung Cavity as Flem, from the Lymph System. This is why my cousin Derek, lost his Lung Infection two hours after consuming an 8 ounce glass of Copper Water.

The three best minerals, that I have tested that meet this criteria, were in fact the Calcium, Zinc, Copper and Magnesium.

Then, I proceeded testing using larger dosages as NTSS constants, to see what medical benefits would be obtained.

So, it seems that when a larger amount of Calcium is consumed as an NTSS Agent, you end up being able to mask and/or hide some or all of the symptoms, that are being caused by these Acidic Crystalline Nuero Toxins. This is important to note as when a person get sick, they hopefully will reach a point where they are not getting any sicker before they reach deaths door.

But, it would now seem that consuming a large quantity of this kind of Calcium could help a person survive even the Plague. So a good dosage of Calcium being taken as NTSS, would be at least four ounces at 700 PPM's.

The next NTSS project that I tested was Zinc. Zinc as an NTSS Agent, ends up within just 15 minutes of consumption, stopping all of the Sexual Replication of all Nitrogen Breathing Pathogens. Zinc is also acts as a Super Anti Oxidant. So, when a person has actually stopped all of the Sexual Replication of these Pathogens, you end up freezing the overall condition, so that it is not progressing or getting worst. This is an important concept to note, as after ten days, any and all Virus lose there ability to replicate, and after thirty days they start to die off of old age. So, a persons Viruses would stop replicating after ten days anyway, and then they, would lose there Viral Infection completely in about thirty days, as these Pathogens all die off.

The next NTSS project that I tested was Copper. Copper as an NTSS Agent, ends up actually killing all Nitrogen Breathing Pathogens (Viruses) and Bacteria within about 15 minutes, but it also kill something that no other element can kill and that is that it kills all Parasites (i.e. Malaria); and as this Copper can pass through all of the different barriers, like the Blood Brain Barrier and the Spinal Fluid Barrier, it can actually kill and destroy the Brain Eating Ameba. Note according to current medical concepts there is no treatment to stop or cure a Brain Eating Ameba as you would normal just die. But, the Copper will 100% stop this Ameba in fifteen minutes. It will also kill of the Brain Eating Ameba that is called Leshmens (Gulf War Veterans have this).

ANTAGONISMS: This concept states that consuming to much Zinc in your diet can remove Copper and too much Copper in your diet can remove Zinc. Therefore, I thought it would be important to have a Copper product to go along with the Zinc if someone wants to take both. But in my past while actually doing clinical testing, I never saw any long term problem developed from consuming to much of the Copper, or even Zinc for that matter. But, I thought I would let you know about this concept of Antagonisms anyway.

In November of, 2002, I flew to Xharove Ukraine. I was the guest speaker all day at the Russian Federation of Infectious Disease Symposium. In attendance was the Surgeon General of Russia and the Ukraine and maybe Belarus and over 150 doctors who all specialized in Infectious Diseases. I spoke all day and Roman

Ponomarenko was my interpreter.

In my speech I taught and covered how an NTSS Agent could penetrate and Carry other things throughout the entire Body System. For example, if a person were to mix the Copper with some Baking Soda this would maybe help to target Cancers, as normal Cancer that is developing likes to use some Copper to expand it feeder veins'. Yet Copper at the NTSS level is toxic to Cancer Cells as it seems to kill any Pathogen that Breathes Nitrogen, and believe it or not a Cancer cell is really one of your cells that now is breathing Nitrogen.

So, as you can see a lot of these concepts start overlapping. In general I love to use the Calcium as a treatment to go along with any product as it really enhances what you are attempting to medically do.

Therefore, in general, Calcium can be consumed without any negative side effects no matter how much within reason is c consumed in my opinion.

As you can see as I teach these concepts I seem to make a lot of enemies and a lot of friend.

Your friend Dave
