Prior to the year 2011, I couldn't find a reliable free visit counter. Every one that I tried to use failed at one time or another. Thus, I had to do the best that I could to try to determine the number of visitors for each year. At the very best, the numbers shown for the years prior to the year 2011 are estimates. So far, the current visit counter is working correctly.

Starting with the year 2018, I banned my own address, so that my maintenance of the website would not show as either visits or hits.
