Sydney's new connection hub

Sydney Metro is Australia's biggest public transport project. In 2024, Sydney will have 31 metro railway stations and a 66 kilometre standalone metro railway system. There will be ultimate capacity for a metro train every two minutes in each direction under the Sydney city centre.

As part of the Sydney Metro City & Southwest project, an underground station will be constructed at Pitt Street, in Sydney's CBD. This includes a proposed design for an over station development, consisting of two separate buildings above the northern and southern station entries.

Pitt Street north building

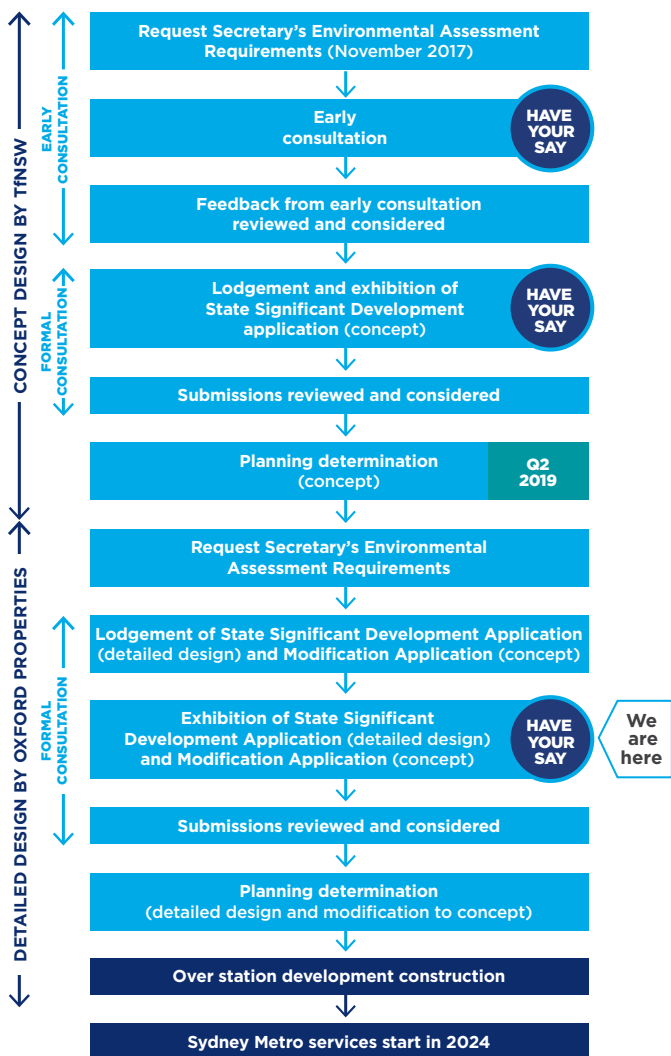

Above the northern entry of the Pitt Street Station, on the corners of Park, Castlereagh and Pitt streets, the Pitt Street north building capitalises on the introduction of Sydney Metro by providing a 39-storey commercial office building integrated with the future Pitt Street Station. The proposed commercial and retail uses in this location will strengthen Central Sydney's role as a primary office market in the international sphere, and will align with a key action in the Eastern City District Plan (2018) by maximising the land use opportunities provided by the new Pitt Street Station.

Designed by world-renowned architects Foster + Partners, the Pitt Street north building is inspired by its unique park-side CBD context, bringing together office, transport, retail and public places in a coherent form. Its sandstone and bronze colour palette responds to the surrounding context in a contemporary and bespoke manner.
