

FIRST PENTACLE OF VENUS

In my prior incarnation as Dr. John Dee, I wrote a book called The Hieroglyphic Monad / Monas Hieroglyphica. The book asserts that, in it: "There is not a single superfluous dot, nor is there one dot wanting," a central tenet in Dr. Dee's ciphers. Ink blots are Dee's way of encoding ciphers intentionally—not error done accidentally.

encrypt secret messages with intentionality.

Place your attention to imperfections

that conspicuously distress this

ThothMoses

III
(3)

Thoth

This
those

Moses

This secret cipher emerges as an unimpeachably sophisticated slope angle wrought with daedelian precision. The solution deciphers with linguistic trinity: Moisés (Spanish), Moses (English), & ThothMoses (Egyptian). Though a less complex solution is achieved by permitting "o" to be shared amongst both "Thoth" and "Moses," Dee demonstrates Thoth inevitability within Hebrew Hieroglyphic emergence: "i" = "l" (i=Vav Cholam Maleh="o").

Thoth-Moses emerged phenomenologically downward along the slope cipher in a southwest trajectory. The slope's upward trajectory intersects the sigil of an inner circle rod near the primary conspicuous dot. Three capitalized Roman numerals (III) may be drawn into the final cipher solution with this interaction. Dee's solutions are self-evident by virtue of accessory ciphers that reinforce/repeat the main cipher solution.

This Author cryptically ciphers threeness through this Trinity: a Colon, a capital A, and Lamed ל (the Hebrew letter "L"). The slope cipher 1) clips the colon, 2) cuts the Lamed, & then 3) ascends in parallel supra-position alongside A to the West. Thus interweaves a ciphered "III/three" (embodying a Triple T?) with cryptic queries—A ל:—spun by Dee, if open eyes can see. Dee poses a pre-destined question—encrypted in impromptu Ad-Lib:—"Hebrew Gematria: (ל) Lamed=?" Gematria (ל): 30. Digital root decoded: 30= 3+0 =3. Thoth-Moses-III/3 emerges with linguistic precision & reinforced by accessory trinity ciphers.
