## CAR CHAOS

To: Mr. Jawahar Bhatia, Mr. Brij Arora  
Attention: Mr. David Scaler

I understand you want to start with a pilot program and I agree. But, the pilot(s) must be spectacular and informative. There are three parts to MEA's education; conventional and online. Each includes automobile mechanic classes, automobile consumer classes, and Clean Air Plant (CAP) consumer exhibition classes.

The developing world becomes extremely polluted through its development. The Clean Air Plant will soften the assault against our planet. The CAP eats pollution. It creates an acidic environment that destroys disease germs. It also creates plant food (carbon dioxide) that nourishes plants and gives us **New Life!**

The automobile mechanics' classes will teach the world's auto technicians that cars are serious guided missiles that can kill and that they must become the best educated auto technician they can be.

We can't imagine their world but through JB, they do imagine ours. They want to be just like us when it comes to cars. (See the original letter from 2007. JB is a famous fighter pilot in India and his family owns a famous school.) Remember, they are in chaos regarding cars and came to us for help. Our teachers, again through JB, gave them a taste of MEA Online Training and they want much more.

**Bill Willix**

A handwritten signature in black ink, appearing to read 'Bill Willix', written over a light-colored background.
