

Many technicians are not aware of this fact but have the **Right to Know** it. Our Clean Air Plants will absolutely solve this problem. When you view this website, Bio-Cascade.com, you will read about the positive changes Clean Air Plants can make not only inside our schools (your buildings) but in India's and the world's total air quality. Clean Air Plants improve the health of our planet and the health of all human beings. We've measured the air quality prior to setting up the equipment and after. The results will astound you.

We are fortunate that we are both knowledgeable in our own industries in our own countries and are blessed to speak the same language. Together, we can make something possible that wasn't possible in the past; we can educate India's auto technicians to be the best at what they do, **AND** remove India's air pollution at the same time with our Clean Air Plants. You provide the location, marketing and staff, we'll provide the same on our end. Plus, the most important ingredient of all, our teachers (the middle men) with more than 90 years of collective automotive knowledge.

Thanks, and best regards,
Bill Willix
