Dear Mr. Arora:

I'm almost ready to devote teachers' time to go to India online. As you know, you never get a second chance to make a first impression so the website your students see the first time and every time thereafter must make a spectacular impression. Your students must learn something every time the website is accessed. ***It Must Be The Greatest Automotive Show On Earth!***

All American automotive schools over the past 90 years have failed due to one fundamental error; they didn't understand that their teachers stopped learning once they got in the classroom. They fell behind our ever changing, always aging automobiles, which therefore, destined the teachers and the schools to fail. It is important to note that two and five year old cars have very different problems.

MEA teachers not only teach every day, they learn every day through real life application, such as, on the job fixes; through our LIVE Telephone Hotline, through our Tech Van visits (which arrive to the onsite location to teach and assist our members in making auto repairs), as well as our latest innovation through our **Virtual Computer Hotline**. We have access to and utilize the most current automotive information available. MEA does not only derive its knowledge through conventional methods but also practical means. It is important to understand that America has experienced the problems that India, and the rest of the world, is now facing so we can extend what we've learned and ease the burden of trial and error around the world. Our teachers love what they do, and do it better than anyone else in the world. Our members have been with us for years because of our dedication and credibility to the information we provide, which is unlike manufacturer **Dealerships** that are sales' motivated. MEA is the perfect third party fact finder that can protect the automotive consumers of the entire world.

Visit our website, MEAttraining.com. It contains information and details on all the educational assistance we provide. Attached is a poem I wrote 21 years ago which further explains my point. We don't necessarily think of our automobiles as dangerous pieces of equipment when in fact, they are serious guided missiles that can kill, omit toxic fumes that can effect a technicians overall health over time.
