

# SET UP

Set up is very easy with the Beetle Bits MINI Cutting System. Simply plug the modules into the Waffle Grid as shown below. **figure 1**

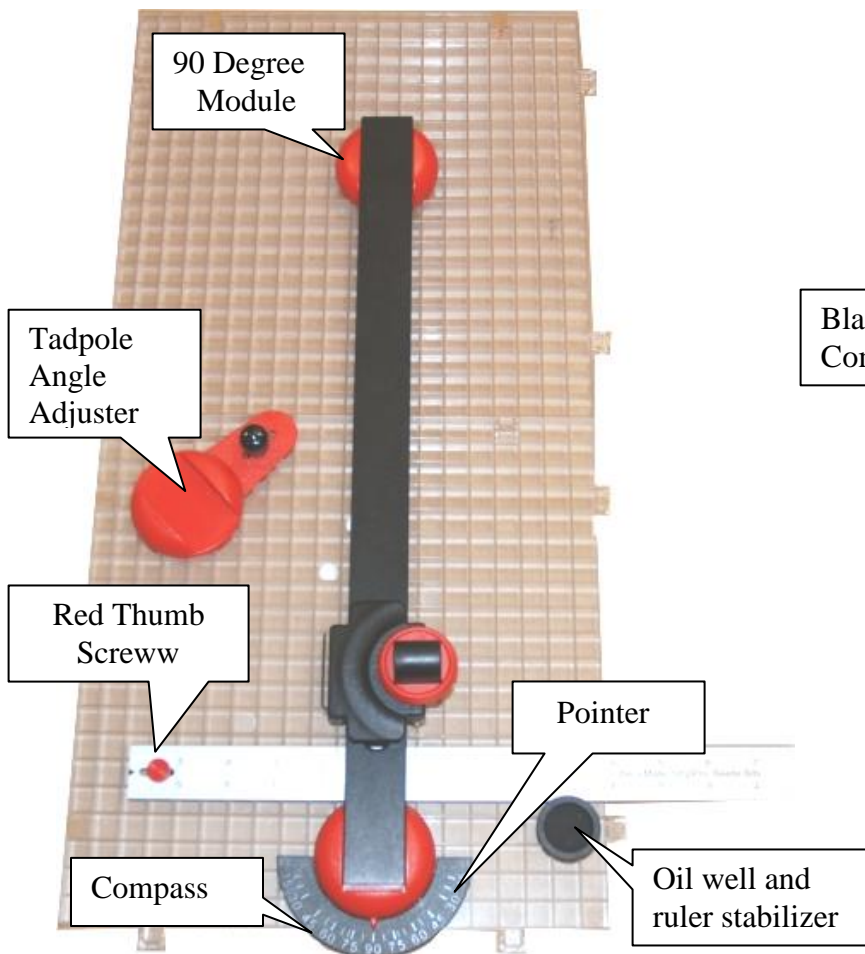

If you are not using all of the modules it is a good practice to leave them plugged in along one edge of the Waffle Grid. Close enough to be in reach, but out of the way.

## RULER CALIBRATION

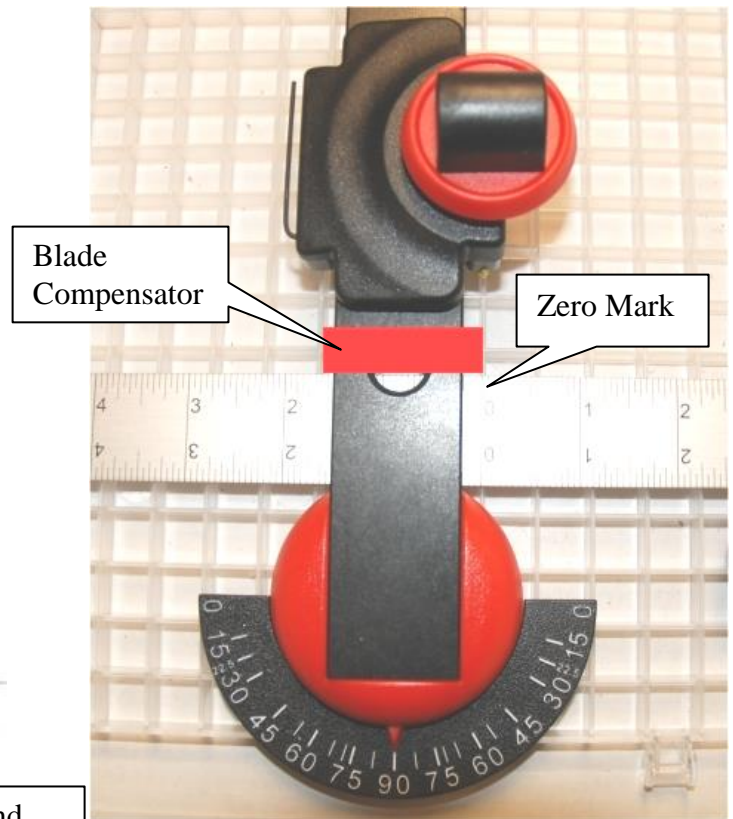

The first thing you will want to do is to plug in and calibrate the ruler. **figure 2**

After plugging in the ruler to your desired location, plug in the compass and the pivot pointer, exactly in that order. The pivot pointer has a lip on the underside that will line up equally with the ruler stabilizer. To calibrate the ruler for squareness, all you need to do is loosen the red thumbscrew, **figure 1** press the ruler firmly against the ruler stabilizer and pivot pointer, then retighten the red thumbscrew.

To calibrate the ruler to your glass cutter, simply line up the glass cutter compensator to the ZERO MARK on the ruler. Or line the ZERO MARK of the ruler with the center of a rib on the Waffle Grid. You will need to loosen and retighten the red thumbscrew to do this also.
