

STRIPS

The following is an example for cutting 2 INCH STRIPS:

Figure 1

Place the glass on the ruler. (**figure 1**) If we slide the glass right or left to the number **2** and make a score, we will have a **2 INCH** strip.

You may continue making consecutive scores by sliding the glass along the ruler to the next desired width.

HINT: It is much easier to look at the corner edge of the glass than to look at a score-line. Sometimes the score-line may not be visible.

SQUARES

The following is an example for cutting 2 INCH SQUARES:

After you cut your 2 INCH strip, you can cut it into 2 INCH squares.

Place the glass on the ruler.

If we slide the glass to the right (**figure 2**) or left to the **number 2** and make a score, we will have a 2 INCH SQUARE.

See **figure 3**.

HINT: You may continue making consecutive squares by sliding the glass along the ruler to the next desired width.
