

Ball Valve Series

Ball Valve has good reputation for low flow resistance, easily quick open/close, well seal performance, long usage life and reliability. There are two types: trunnion mounted or floating type, both types have blowout proof stem, anti-static, and fire safe approved. Casting is used for low pressure floating type only, while forging is widely used for most valves, especially for high pressure use, with better guarantee and faster delivery.

We supplies: Floating Ball Valve, Cast Trunnion Ball Valve, Forged Trunnion Ball Valve, Thread/SW/BW end Ball Valve, Top Entry Ball Valve, Fully welded Ball valve,3-way Ball valve...etc

Main material of the products are A105, LF2,WCB, C5,WC6, WC9,CF8(304), CF8M(316), CF3M(316L), CF3(304L)
