H & M Precision Products Oil Well Production Services

- Continuous Chemical Treatment of Producing Wells
- Batch Treatment of Producing Wells
- Well Cleanouts: Thermal Melt™
- Solvent Flush
- Acid Jobs
- Insitu Chlorine Dioxide Treatments
- Water and Oil “Sample Analysis” to effectively monitor Well Treatments

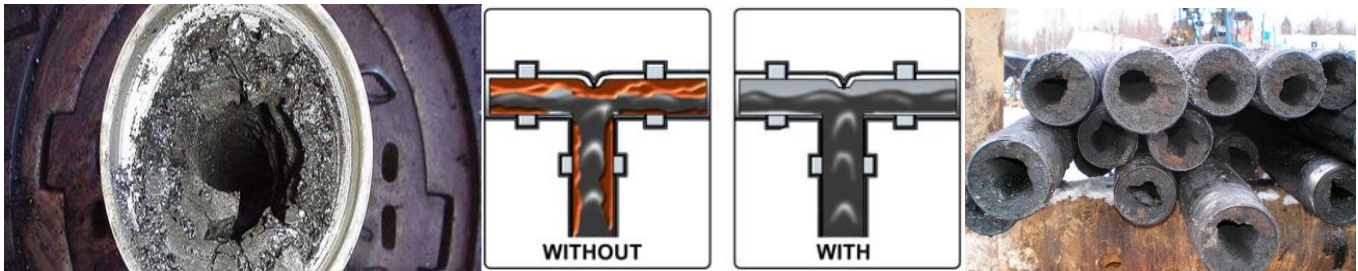

H & M Precision Products Oil Well Production Products

- Acids / Biocides
- Cleaners
- Corrosion Inhibitors
- DeFoamers
- Foamers
- Glycols
- H2S Controllers
- Methanol
- Paraffin Breakers / Inhibitors
- Oils
- Scale Inhibitors
- Wetting Agents

Primary Focus for Ohio Oil & Gas Winter Meeting

H & M Precision Products **“Proprietary”** Process for Oil Well Treatments.

Thermal Melt™ Treats Paraffins, Corrosion, and Scale Inhibitors

Paraffin removal from the inside of your tubing on plunger lift, rod pumped and flowing producers presents a problem for many oil and gas producing wells. Our proprietary process combines 3 separate products pumped into the affected system and paraffin is cleaned from tubing. The 3 oil soluble compounds are pumped utilizing our “In Field” batch vehicle in alternating stages to provide a “heated” reaction from surface to bottom. We have performed this Thermal Melt™ process on hundreds of production wells in the Dakota, Mesa Verde, and Gallup formations in the 4-Corners Region with a 95% success rate.
