## H & M Precision Products Oil Well Production Services

- ◇ Comprehensive Chemical Programs ◇ Continuous Chemical Treatment of Producing Wells ◇
  - ◇ Batch and Call-Out Treatment of Producing Wells ◇ Paraffin Cleanout: Thermal Melt™
    - ◇ Solvent Flushes ◇ Acid Jobs ◇ In Situ Chlorine Dioxide Treatments ◇
- ◇ On Going Water and Oil “Sample Analysis” For Precise Treatment Recommendations and Program Adjustments ◇

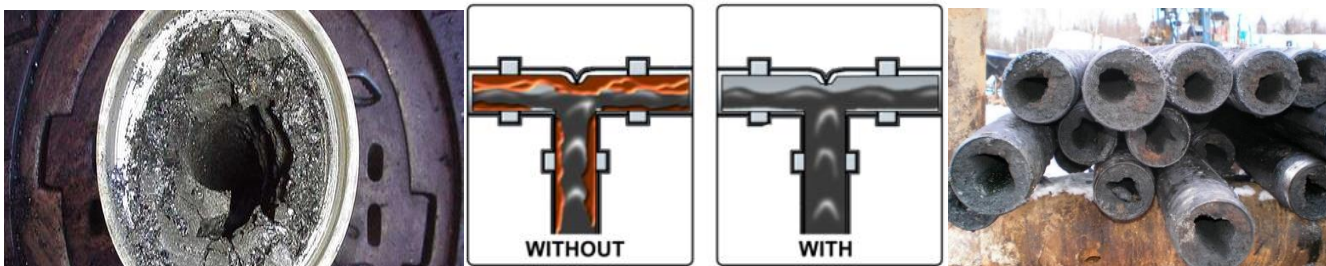

## H & M Precision Products Oil Well Production Products

- ◇ Acids ◇ Biocides ◇ Corrosion Inhibitors ◇ Scale Inhibitors ◇ Paraffin Breakers and Inhibitors ◇
- ◇ De-Foamer and Foamers ◇ H<sub>2</sub>S Scavengers ◇ Cleaners ◇ Wetting Agents ◇ Methanol ◇ Oils ◇ Glycols ◇

## Primary Focus for Oil & Gas Well & Water Treatments

H & M Precision Products **“Proprietary”** Process for Oil Well Treatments.

## Thermal Melt™ Treats Paraffins, Corrosion, and Scale Inhibitors

Paraffin removal from the inside of your tubing on plunger lift, rod pumped and flowing producers presents a problem for many oil and gas producing wells. Our proprietary process combines 3 separate products pumped into the affected system and paraffin is cleaned from tubing. The 3 oil soluble compounds are pumped utilizing our “In Field” batch vehicle in alternating stages to provide a “heated” reaction from surface to bottom. We have performed this Thermal Melt™ process on hundreds of production wells in the Dakota, Mesa Verde, and Gallup formations in the 4-Corners Region with a 95% success rate.
