What we provide at AAA TECH DRONE SOLUTIONS

Corporate Solutions

Video content is a key component of any business' digital marketing strategy. A video mixed in with still photography gives the viewer a better understanding of your business and an awareness of your products and services.

Building Inspection and Surveys

We can provide high-level aerial stills or videos of buildings, towers, with full roof surveys and inspections.

Construction Sites

Construction site aerial photography can show every stage of a development from planning, foundations and building, through to completion. There is no better way of getting an overview of a construction site than by using aerial photography. Our time elapse packages are fascinating to add to your marketing collateral.

Estate Agents

We produce dramatic aerial property photography and videos for residential estate agents. Aerial videos and photographs capture the scale of the property, land, gardens and surrounding area. From simple high vantage point to complete fly through.

Commercial Property

As commercial agents if you are selling or leasing commercial property, there is now a cost effective way to produce stunning aerial photographs and videos of offices, retail parks, industrial units, factories, farms and land.

360° Aerial Panoramas

Our stunning drone photography service produces high-resolution 360° interactive aerial panoramic photographs to promote your business.

Our 360° virtual tours give you the feel of being there up high with a bird's eye view, where you can turn around 360° and look closely at every detail.

Agriculture

With our drones it is now easy to view any given land area and turn it into actual data. Precision agriculture is now affordable using drone technologies.

Mapping

We fly our drones with a high-resolution camera to create 12 megapixel aerial photographs for a wide variety of commercial mapping uses. We can measure and map hard to reach areas.

- **2D Mapping**

We specialise in 2D mapping.

- **3D Mapping**

To maximise the detail of our 3D mapping we also take aerial images from points of interest, flying around objects at different altitudes in addition to flying in the normal overlapping regular grid pattern. These additional images add depth and detail to the final 3D rendered model.

Sport, Travel and Tourism

Drone aerial photography and videography using unmanned aerial vehicles can now really show the sports, leisure, travel and tourism industries from an exciting viewpoint, previously only available from expensive helicopter shoots.
