

Apprehend™

Antiseptic Teat Dip with Chlorhexidine Acetate

Apprehend is a chlorhexidine acetate-based teat dip formulated with two skin conditioning ingredients and a buffered pH to keep teats soft and pliable.

GEA Farm Technologies

Features and Benefits

- Chlorhexidine Formulated with 0.52% Acetate**

Offers dairy producers an effective, gentle alternative to iodine teat dip products.

- Aids in Decreasing Organisms that Cause Mastitis**

Provides a broad-spectrum kill of mastitis pathogens that can cause intramammary infections. Tested against *Staph. aureus* and *E. coli*, and proven to aid in decreasing these organisms.

- Dual Skin Conditioning Package**

Formulated with two emollients (PVP and Glycerin) to promote skin conditioning, teat tissue health, and to reduce irritation to operators' hands.

- Stable pH**

Reduces mastitis pathogens without danger of irritation to skin.

- Deep Blue Color**

Good staining qualities provide visual confirmation that teats have been dipped properly.

- Ready to Use**

Stable ready-to-use formulation requires no mixing or dilution.

- 100% Customer Satisfaction**

All GEA Farm Technologies hygiene products have a 100% Customer Satisfaction Guarantee.

Apprehend meets all standards required by the Veterinary Drug Directorate at Health Canada.

Apprehend™

Antiseptic Teat Dip with Chlorhexidine Acetate

Directions for Use

Use at full strength. Do not dilute. Prior to milking, use a specially formulated pre-milking teat dip or udder wash to thoroughly clean teats.

Indications:

Use this topical solution undiluted as a post-milking teat dip used as an aid in the prevention of the spread of mastitis-causing organisms in dairy cattle.

Post-Milking:

Immediately after milking, dip each teat in Apprehend. Allow teats to air dry. Do not wipe. If a common teat dip cup is used for application, a fresh solution should always be used at each milking. The teat dip cup should be emptied, cleaned and rinsed with potable water after each milking session or when dip cup solution becomes contaminated during milking. Do not pour remaining solution from dip cup back into original container. When a cow is being dried off, continue the teat dipping once a day for 1-2 weeks. With freshening cows, begin dipping teats twice daily for about 10 days before calving.

Caution:

If outside temperature is below freezing, allow teats to air dry before letting cows leave the parlor to prevent from freezing. Consult your veterinarian before using on teats that are irritated.

Product Properties

Appearance: Deep blue liquid

Odor: Mild

pH: 7.0 (as is)

Specific Gravity at 25°C (77°F): 0.98 (water = 1)
