

Liquid Santex™

Udder Cloth Liquid Detergent

Liquid Santex is a liquid udder cloth detergent that effectively cleans and softens udder cloths, and is specifically formulated for dairy farm use.

Features and Benefits

- **All-in-One**

With Liquid Santex, only one product is needed to do the proper job of cleaning and softening cloth towels used on a dairy. It's formulated with a powerful cleaning surfactant for efficient soil removal, yet it makes towels feel soft and gentle to the teat skin.

- **Convenient Application**

Can be automatically dispensed in most washers, ensuring correct dosage every time. No waste of product and no risk of compromising efficacy because of incorrect amounts being used.

- **All Kinds of Waters**

Effective against mineral hardness, maximizing the detergent's ability to clean towels.

- **Prolongs the Life of the Towels**

Only Liquid Santex contains an exclusive formula that helps keep cloth towels looking new by helping prevent the deterioration normally seen when adding chlorine bleach to a wash.

- **Energy Efficient**

Using Liquid Santex can help reduce energy bills in two ways:

1. The cleaning capabilities of Liquid Santex are effective in cold water. Hot water is not required.
2. Cloths only need to be spun dry in the washer to be fully cleaned with Liquid Santex. No drying in a dryer is necessary. This allows for a slightly moistened towel to clean teats more effectively and be gentler on the teat skin.

- **One Step Process**

Save time and money by eliminating the two-step process of laundry. With Liquid Santex, cloths only need to be washed, not washed and dried. And, there is no additional process of adding bleach to the wash load.

- **100% Customer Satisfaction**

All GEA Farm Technologies hygiene products have a 100% Customer Satisfaction Guarantee.

Liquid Santex™

Udder Cloth Liquid Detergent

Directions for Use

NOT FOR HOME LAUNDRY USE.

For standard top-loading and front-loading washers, use 2-4 oz. (60-120 ml) of Liquid Santex per load. More product may be needed if towels are heavily soiled. The temperature of the wash water should be warm to hot for better soil removal. Consult your GEA Farm Technologies hygiene specialist for specific directions.

NOTE: Liquid Santex will clean cloths in cold water, but to more effectively lift soils and remove stubborn stains, warm to hot water is recommended.

Recommendations for Towel Storage

- Always use two separate baskets, one for dirty towels and one for clean towels.
- Wash both towel baskets weekly, or at the sign of any contamination.
- Store towels in a clean, dry place when not in use.
- Do not store near potential sources of contamination.
- Avoid storing more towels than will be used in the next two milkings.

NOTE: Towels left in washing unit may be used within 12 hours.

Product Properties

Appearance:	Slightly hazy, clear to light yellow liquid
Odor:	Chlorine
pH:	13.5 (0.5% by volume)
Specific Gravity at 77°F (25°C):	1.17 (water = 1)
Solubility:	Complete at recommended use dilutions
