

# Theratec® Plus

## Pre & Post Antiseptic Teat Dip with Added Emollient

Theratec Plus is an emollient enhanced version of the number one GEA Farm Technologies teat dip, Theratec®. Theratec Plus is a ready-to-use 0.5% (5,000 ppm) iodine teat dip, formulated to be safe and effective for use in pre- and post-dipping applications.

GEA Farm Technologies

### Features and Benefits

- **Finishes What It Starts**

Theratec Plus, with 0.5% iodine, has been proven in both university and in-house laboratory testing to kill environmental and contagious mastitis-causing pathogens in both pre- and post-dipping applications.

- **Teat Skin Conditioning**

Contains higher levels of the emollient glycerin, enhancing the ability to keep cows' teats soft and pliable.

- **Natural Formulation**

No dyes or thickeners added. Dries quickly so that bedding material does not adhere to teats.

- **Contains Surfactants**

Penetrating surfactants provide excellent wetting qualities to help coat the teat and aid in removing bacteria and soils from teats when used as a pre-dip.

- **Dark Brown Color**

Good staining qualities provide visual confirmation that teats have been dipped or sprayed properly.

- **Maintains pH for Consistent Performance**

Theratec Plus is formulated with a buffering system that maintains the product's pH for consistent, effective and gentle performance.

- **Ready to Use**

Ready-to-use formulation requires no mixing and maintains stability milking to milking.

- **100% Customer Satisfaction**

All GEA Farm Technologies hygiene products have a 100% Customer Satisfaction Guarantee.

Theratec Plus meets all standards required by the Veterinary Drug Directorate at Health Canada.  
DIN No. 02263343

# Theratec® Plus

Pre & Post Antiseptic Teat Dip with Added Emollient

## Directions for Use

Use at full strength. Do not dilute.

**Indications:** This topical liquid product, when used undiluted as a post milking teat dip, effectively aids in reducing the spread of mastitis.

**Pre-Dipping:** Before milking, dip each teat with Theratec Plus. After 15 to 30 seconds, dry each teat thoroughly with a single service towel. If the udder and teats are heavily soiled, wash with an antiseptic solution and dry before application of Theratec Plus.

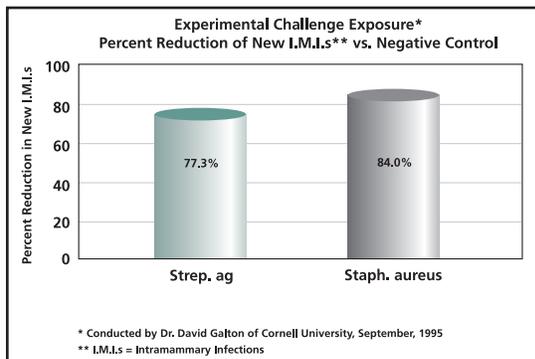

**Post-Dipping:** Immediately after milking, dip each teat with Theratec Plus. Allow teats to air dry. Do not wipe. If outside temperature is below freezing, allow to air dry on the teat before the cow leaves the parlor to prevent freezing.

If a common teat dip cup is used for application, a fresh solution should always be used at each milking. The teat dip cup should be emptied, cleaned and rinsed with potable water after each milking session or when cup becomes contaminated during milking. Do not pour remaining solution from dip cup back into original container.

## Research

Theratec Plus has been thoroughly tested in an Experimental Challenge consistent with those recommended by the NMC. The results of these studies have shown Theratec Plus to be an excellent mastitis prevention tool.

Research data available upon request.

## Product Properties

<b>Appearance:</b>	Dark red-brown liquid
<b>Odor:</b>	Iodine
<b>pH:</b>	5.3 (as is)
<b>Specific Gravity at 25°C (77°F):</b>	1.03 (water = 1)
<b>Wetting Ability:</b>	Excellent
