

Neuro-Aesthetic Procedures & Pricing

WHERE NEUROLOGICAL PRECISION MEETS REFINED BEAUTY

All neuro-aesthetic procedures in our office are performed **exclusively by a physician subspecialist**, ensuring the highest level of expertise, safety, and natural results.

An **initial consultation** may be required depending on the complexity of the treatment. This visit allows us to evaluate your anatomy, goals, and medical history to ensure the procedure is appropriate and delivers optimal, personalized results.

If your procedure is performed on the **same day**, the **consultation fee will be credited** toward the cost of treatment.

About Our Treatments

Botulinum Toxin (Botox®)

Botulinum toxin is a purified neurotoxin used to precisely relax targeted muscles for both **therapeutic and cosmetic** purposes. In neurological care, it treats conditions such as chronic headaches, dystonia, facial spasms, TMJ pain, and muscle spasticity. In aesthetic medicine, it softens dynamic wrinkles, refines facial contours, and improves symmetry.

All Botox treatments are customized and performed by a physician with expert knowledge of neuromuscular anatomy—ensuring **safe, refined, and natural-looking results**.

Dermal Fillers

Hyaluronic acid fillers restore volume, enhance contours, and improve skin hydration while maintaining facial harmony. Because HA is naturally found in the body, results look natural and can be adjusted or dissolved if needed.

Our philosophy emphasizes **balance, structure, and subtle enhancement**, never overcorrect.

SkinPen® Microneedling & PRP

SkinPen® creates controlled micro-injuries to stimulate collagen, improve texture, reduce fine lines, acne scars, and uneven tone. When combined with PRP—derived from your own blood—results are amplified using the body's natural healing mechanisms.

All treatments are performed using sterile, medical-grade protocols for safety and optimal outcomes.

Young brain. Young skin. Precision at every level.
