Agenda

1. NAVIGATE

Navigate the twists and turns of LEEDv5 O+M Beta recertification, learning from our successes and our face-palm moments (reflecting on how much of our LEED v2009 certification remained relevant).

2. DISCOVER

Discover the strategies and improvements that have led to operational resiliency, including leaking windows in torrential downpour and the addition of EV charging infrastructure (in the same day!)

3. EXPLORE

Explore the journey towards net zero energy and carbon, including the installation of a new solar array and a partnership with the Arbor Day Foundation.

4. LEARN

Learn how to apply the lessons from this case study to your own organization's sustainability and operational resiliency goals.

Who's in the Room?

① Start presenting to display the poll results on this slide.

Our Story

Our name is inspired by the **natural environment** that surrounds us.

Branch patterns are the building blocks of natural systems. Humanity is innately drawn to these **elegant and efficient fractals**.

This deep connection is represented throughout mankind's history of science, art, engineering and architecture.

Looking closely, we see that the buildings and infrastructure we help create are full of **fractals and branching patterns**.

LEED **V5**

A market ready rating system that will drive the built environment toward a near zero carbon future that is equitable, resilient, and promotes the wise, safe utilization of all resources.

LEED v5 DEVELOPMENT TIMELINE

Current Phase

September 2023

LEED O+M beta
LEED for Building Design and Construction (BD+C) and Interior Design and Construction (ID+C) will proceed without a beta

Continuity across the building lifecycle

Operations and Maintenance

Position every building on a path to improved performance while maintaining the pursuit of market transformation and leadership.

How we get there:

- Provide education and leadership in a critical time.
- Establish a roadmap of actionable and transformational criteria, and a plan for improvement over time.
- Achieve certification through measurable building performance.
- Reward existing buildings that start down the path toward decarbonization by creating strategic long-term plans and taking immediate steps.

LEED v5 Operations + Maintenance: Existing Buildings

	Integrative Process, Planning & Assessments	4
Prereq	Operations Assessment: Climate Action, Quality of Life and Ecological Conservation and Restoration	Required
Credit	Operational Planning and Response for Resilience	2
Credit	Equity within Operations and Maintenance Staff	2
	Location and Transportation	10

Certification Systems as Reporting Frameworks

	JUST	Fitwel	LEED
ENVIRON- MENTAL			LEED O+M’s core focus on energy, water, and material efficiency directly aligns with the environmental metrics in ESG, particularly for climate risk and resource management.
SOCIAL	JUST’s focus on equity, diversity, and fair labor practices aligns with the social component in ESG reporting.	Fitwel’s focus on health and well-being aligns strongly with the social aspects of ESG, especially in enhancing workplace productivity, reducing absenteeism, and promoting a healthy lifestyle.	The credits on indoor environmental quality, occupant well-being, and community engagement align with social ESG goals, particularly in health and safety.
GOVERNANCE	Transparency and accountability in reporting workforce diversity and pay structures also fall under governance .		LEED’s transparent certification process and ongoing building performance evaluations feed into governance aspects, emphasizing accountability and sustainability reporting.

LEED O+M v5 Beta Program

Internal Goals

- Strengthen knowledge of O&M
- Develop understanding of v5 criteria
- Become experts in the new LEEDOnline Platform
- Put ourselves in the shoes of our clients

The overarching goal of LEED v5 is to guide new and existing buildings towards achieving near-zero carbon emissions operationally by 2050, supported by a decarbonized grid.

Operational Resiliency

Addressing Resiliency

- Emphasis on climate resilience
- Impact of building resources
- Greenhouse gas emission focus
- Policy adaptation

TACKLING EMISSIONS IN CRE :

1. RESPONSIBLE DESIGN

- Embodied carbon
- Passive strategies
- Electrification
- Efficient systems
- Renewable energy

2. OPERATIONAL EFFICIENCY

- Energy + refrigerant monitoring
- Grid integration
- Continuous commissioning
- Auditing
- Supply chain
- Health + wellness
- Offsets

Prerequisites & Credits

Certification Comparison

Very few large scale design changes

Need for O&M certification for originally certified BD+C buildings

Policy Development

Discuss new policies for LEED and company

Discuss internal goal discussions that align with international climate goals and target dates

Ongoing Operations

Large emphasis on ongoing maintenance and logging needs

Occupant involvement in sustainable practices

Delegating roles as a challenge

Takeaways

Unlike any other certification our firm has received

Important for organizational changes in operations
