## Affordable powerful CAD/CAM Systems

Thank you for your interest in Shopcam. We are proud to announce our latest version of Shopcam.

Shopfloor programming at it's best

- Windows based XP/XP Pro/2000/Vista/Win 7
- Over 1300 satisfied customers
- DBS llc established 1989
- Over 400 'off the shelf' postprocessors
- Custom postprocessors available (\$90 average)
- 2-axis system \$495 Mill or Lathe or WEDM system \$495

Our philosophy at DBS is simple "Service is the most important thing we do". "Software is useless if the customer cannot understand it or get support if they need it". "A CAM system without a good postprocessor only draws pretty pictures". I am confident you will be satisfied with our software, service and support. Call us today;

In addition to all the standard features, like unlimited island avoidance, built in engraving, tool libraries, advanced patterns, CAD detailing and dimensioning etc. We have added or improved the following:

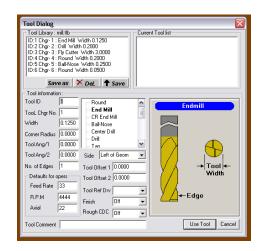

### All New Operation Libraries

No need to redefine the same operation over and over. We allows you to save the operations in a library file. In addition to the over 80 standard parameters, all the info needed to generate or regenerate a toolpath is saved. Even the info from cycles like engraving, threading, and helix are saved. Control buttons allow you to save your operation to the library and update the operation file immediately. In addition to using opers from the library, you can use operations from the part file. This feature will save a lot of time and money.

#### Operation Manager Operation Library Current part file: Mill-test Engraving T4 End Milt 0.050 dia Zig Zap 11 End Milt 0.050 dia Zig Zap 11 End Milt 0.500 dia Quele 1881 T5 Centel Onit 0.125 dia Profile Rough T1 End Milt 0.500 dia Finish T5 End Milt 0.500 dia Finish T5 End Milt 0.500 dia Finish T5 End Milt 0.500 dia Finish T2 End Milt 0.500 dia Finish T2 End Milt 0.000 dia Finish T5 Round 0.100 dia Multi-Z Rough T1 End Milt 0.500 dia Multi-Z Rough T1 End Milt 0.500 dia T-Path-6; Finish T4 End Milt 0.520 dia T-Cycle-3; Cycle; G81 T1 Center Drilt 0.100 dia T-Cycle-4; Cycle; G83 T2 Drilt 0.200 dia T-Cycle-5; Cycle; G84 T3 Tap: 0.200 dia Add Skip it Down Up Delete Merge Operation Summary Drill Cycle Tool = T2 Drill: 0.200 dia Group Layer(s): 2, Total Stock : 1,0000 Feedrate : 4.0000 T/C Retract : 5.0000 CDC Finish Stock: 0.0000 Axial Feedrate: 4.0000 R-Plane Z : 0.1000 Drill Cycle#: 83 : 0.1000 R.P.M. Full Depth Z: -0.4100 Peck Edit Oper Use Oper Close Cancel

## New and improved Tool Dialogs

Quickly select a tool from either the tool library or a tool you have already used. Control buttons allow you to save your tool to the library and save immediately. Since you can build your libraries 'on the fly' the more you use Shopcam, the easier it will be. The tool picture will show the tool type and relevant parameters. No need for a tool chart. Best of all, you can save a feed (XY & Z) and a RPM for each tool. Either let Shopcam calculate the feeds/speeds or use the ones stored in the tool library, or enter anything you prefer.

In addition to the new Operation libraries and expanded Tool libraries, we have improved our setup files and setup dialogs, We made the operation input even more simple and added an external program for generating Set-up sheets for the operator.

Included with the Shopcam system, is a one year unlimited technical support plan (renewable). This includes free software upgrades, discounts on postprocessors and access to our members page at <a href="https://www.shopcam..com">www.shopcam..com</a>.

### **Shopcam Standard Features**

# CAD dimensioning, detailing, crosshatching Construction geometry definitions

Offset chain, corner blends, corner breaks, hole chain

Trim, break (window, select, modal)

Move, copy, mirror, stretch editing

Multiple levels of UNDO

Advanced patterns

Curves (arc fit, arc series, b-spline, bezier)

Tool and material libraries

Graphical tool path editing

Flexible tooling parameters (feed, speed, CDC, etc.)

Operation resequence, merge & temporary exclusion

DXF import & export, IGES import

G-code editor (renumber, add/remove spaces etc)

2 Axis motion (Position, Drill, Finish, Manual Path)

#### **Punch Press**

Punch, Nibble, Burn, Bridge-Hit Round and square tool compensation Rectangular, dee, double-dee tool support

#### **Turning**

Groove tool compensation Groove rough and finish cycles Multiple pass rough and profile turning Undercut avoidance Threading: straight & taper

#### Milling

Profile pocketing

Zigzag pocketing

Hog area clearing

Face mill cycle

Spiral/Helical boring

Plunge roughing

Unlimited island avoidance

Multiple contour machining

Multiple Z roughing

Sweep operations

Swarf (Multiple cross section) operations

Project-Onto (3D cross sections)

3D rotation capabilities

Definable stock (castings, cutting optimization)

Graphic collision detection

Approach pull off control

Standard Post Processor Library

Engraving & letter creation (Horizontal & Radius)

Time Study: For path lengths cycle times

Manuals: Technical Reference, User's Guide One year renewable Maintenance Agreement

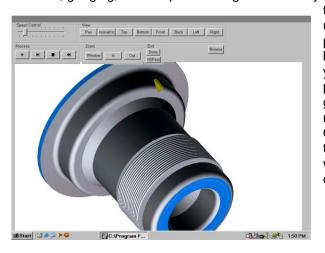

(software updates, technical support)

#### Wire-EDM

Reverse direction roughing Multiple pass roughing 2 Plane wire-edm support

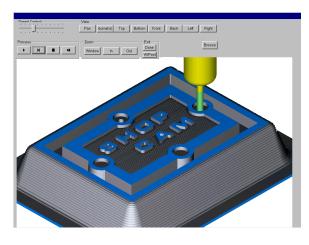

### New 3D Toolpath verification

Toolpath Simulation is more than just fun to watch. With one click you can instantly change the color of the model to reflect the surface left by each tool. All rapid tool movement is shown in red. This helps with collision avoidance, gouging, and toolpath strategies. If for any reason you attempt

to rapid though uncut areas, the path is displayed in bright red, allowing you to correct the problem before it gets to the machine.

Compare our toolpath simulation with packages costing \$1000 more...
