Installing The USB Key for ShopCAM

USB Port Dongle

If you received a green USB dongle, you will need to install the key lock drivers.

Make sure the key IS NOT PLUGGED IN to a port, prior to installing the drivers.
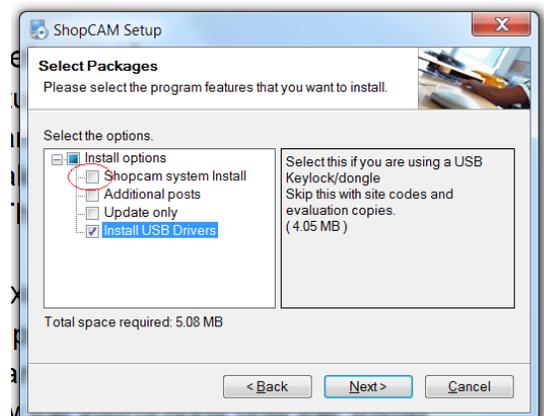

You can either install the drivers through the `Shopcam_Setup.exe` file or run `install.exe` off the CD. Many computers will auto-run a setup file located on the CD . If it doesn't start by itself, you may browse the CD like any drive and open/run it.

When you install these drivers, make sure you run it as administrator. The easiest ways to accomplish this is to 'right-click' on `shopcam_setup.exe` or `install.exe` and select [Run as Administrator] from the drop down. If you do not have administrator privileges, you may not be able to properly install Shopcam, contact your IT personnel.
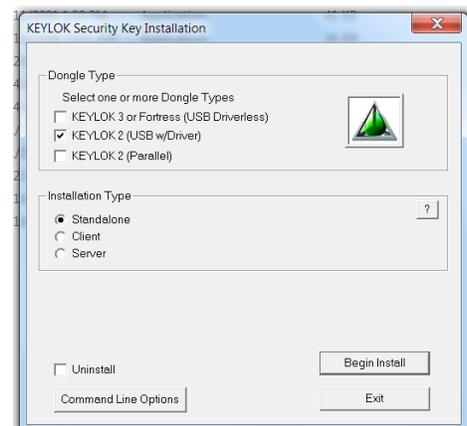

Shopcam Setup (`Shopcam_setup.exe`)

  After launching the complete setup, a couple dialog boxes will appear to reaffirm which operating system and user privileges you have.   You will come to the 'Select Packages' dialog. Uncheck [Shopcam system install] and check [Install USB Drivers]. Select [Next] until the Keylock Installation start.

Keylock Installation (`Install.exe`)

 The Keylock installation should appear like the pic on the bottom-right. Make sure 'Keylock 2 (USB w/ Driver)' and 'Standalone' are selected.   After hitting [Begin Install], simply follow the instructions until the 'Install Successful' window appears.

 Note. If you have any problems with the install, try a different USB port.
