### **Bordetella Vaccine Acknowledgement**

By signing below you verify that your dog has **not** and will not have received the bordetella (kennel cough) vaccine injection/nasal spray within 10 prior to joining camp.

Bordetella is a live vaccine, meaning that your dog can shed symptoms up to 10 days after administration. Similar to the flu vaccine for humans. This safety protocol is in place to prevent an outbreak of kennel cough.

**We will not accept a dog that has received bordetella within 10 days of joining camp.**  
Please plan accordingly.
