

The Benefits of PEMF

PEMF enhances the oxygenation and circulation of the blood through the body, and this helps with health and wellness.

Relieve Anxiety

Increase Range of Motion

Tendon and Ligament Repair

Reduce Inflammation

Enhance Blood Circulation

Relieve Colic Symptoms

Horses Deserve The Best

The Latest Technology in Equine Health

Welcome to the MagnaWave Community!

Who We Are.

MagnaWave has been working with PEMF (Pulsed Electromagnetic Fields) equipment and technology for over 15 years. We are proudly family owned and operated. All of our products are made in the United States and are third-party tested for safe and secure operation.

What is PEMF Technology?

Pulsed Electromagnetic Fields (PEMF) is said to allow the body achieve a natural state of wellness. MagnaWave machines have a unique electrical current that runs through a coil that creates a pulsing magnetic field.

Using PEMF is said to stimulate cell metabolism, increase oxygenation, and reduce inflammation. This action can cause a chain of processes in the body that could lead to improvement of health without adverse side effects.

How Does PEMF Work on Horses?

MagnaWave uses the latest PEMF technology to send a pulsating charge through the body to deliver energy. PEMF has been shown to reduce pain and inflammation, and increase circulation and oxygen content. The pulse can reach 16 inches into the body, penetrating muscles, tendons, ligaments, and bone. Muscle fasciculations can help identify imbalances, pain, or sore muscles that need to be further worked on by PEMF. By pinpointing problem areas and supporting the entire body, the practitioner is able to work at the source of the pain and encourage a state of natural wellness.

MagnaWave Guarantee

MagnaWave's PEMF machines are the most accessible, convenient and fastest way to alleviate pain, increase performance, expedite recovery, improve range of motion and general wellness.

Common Questions about MagnaWave

What should I expect after the first session?

A MagnaWave session can vary for each horse. Your horse can feel energized or very relaxed in the few hours after a session.

Can MagnaWave be used before an event?

Yes, however we recommend trying MagnaWave ahead of time, since horses can react differently to a session.

How does PEMF show areas of sensitivity?

Muscle fasciculations are seen in an area where there is increased resistance from tension, inflammation, edema, lactic acid build up, etc.

Can MagnaWave be used on horses with microchips, stents, or metal implants?

Yes. While the magnetic field will not pass through metal (or microchips) it will go around the implants to the surrounding tissue.
