Roads to Resilience: Building Health Capacity and Climate Adaptation for Stable Supply Chains

Corporate Sustainability/ESG

📍 McCormick Place, West Bldg : 178A

As the effects of climate change intensify, attending to the health and safety of supply chain workers has become increasingly critical. Gain insight into the impact of a healthy workforce on costs and business success. Explore the interplay between employee wellbeing and environmental changes that affects risk, regulatory compliance and insurance costs. Through case studies, follow successful models that integrate innovative financing solutions to protect workers in vulnerable areas while controlling costs and improving supply certainty. Discuss how your organization can navigate complex regulatory landscapes to ensure compliance and leverage insurance and risk mitigation to bolster resilience. Whether you are a risk professional, compliance officer or business leader, join others who recognize that investing in employee health is a cornerstone of resilient supply chains and long-term organizational success.

Learning Objectives:

- Cite the positive impact of a healthy workforce on absenteeism, healthcare costs and business continuity and sustainability.
- Demonstrate financing solutions that help improve worker protection, costs and supply certainty.
- Prepare to advocate for investment in employee health with proven examples of how it can lead to supply chain resilience and organizational success.
