Pest Control Services

GENERAL PEST TREATMENT PREPARATION

Date of service:

The following preparations should be made. Please note, if the unit is not properly prepped, it directly hinders the effectiveness of the treatment. If you feel you are in need of this spray/treatment, please make the following preparation:

- Kitchen and bathroom cabinets must be emptied AND cleaned prior to the arrival of the technician. This includes under each sink.
- Countertops in problem areas must also be clear and there can be no dishes in the sink.
- Remove any objects from the floor such as children's toys, pet food/water dishes, trash cans, etc.
- Sweep/vacuum flooring and baseboards
- Clean the stove-top and backsplash to remove as much grease as possible.

Please note, no people or pets can be inside the unit during the treatment, and up to 2 hours after treatment is completed, and the pesticide is dry.

*If not prepared for this treatment, then a thorough visual inspection of your residence will be completed, along with baiting of potential "hot zones".
