

ShoestringBayHouse Pool Safety Reminder
Pool Fence Placement
NEVER LEAVE CHILDREN UNATTENDED AT ANY TIME
"Watch your children and not your phone"

Dear Guest,

This reminder is sent to all of our guests regardless of whether or not they have small children. Many times friends with small children will stop by so this is an important safety reminder. This safety information must be passed onto all visitors and guests by the signatory to the contract.

If at any time you find the pool area unsafe or a piece of safety equipment broken or missing please notify us immediately regardless of the time of day. Keep notifying us UNTIL you receive a confirmation text or voice call.

Many times the removable pool fence will be left in the pool house by the previous guest, please check all pool storage rooms for the black fence. See picture. The sliding door locks and bars are kept in the lower floor TV room.

A safety device is effective if it is only used properly. If you need a pool swim vest and can't afford one, please notify us in writing and one will be provided at NO CHARGE.

The lock on the lower sliding door has been upgraded, this door is considered a barrier to the pool when locked and the "jimmy bar" is placed inside the track. This compression bar should be placed in the track. There is also a special alarm for the sliding door.

About the pool fence that separates the pool deck from the covered deck:

Visi-Guard's removable pool fencing is an extra layer of safety that gives homeowners a needed sense of security when it comes to owning a pool. Visi-Guard pool fencing acts a protective barrier that keeps your loved ones out of danger from an unsupervised pool. Though children should NEVER be left unsupervised when a pool is on the property.

Visi-Guard is Sentry Safety Pool Fence's top of the line product. It features a more transparent mesh of interwoven fiberglass which has larger holes for maximum visibility while without compromising the strength and durability. This enables you to easily look into the fenced in area and minimizes the obstruction of your backyards beauty. Our construction is completely rust-proof with it's three layer design. The top layer is a powder coated aluminum that will withstand even the harshest elements, a middle layer that consists of PVC piping for a strong frame that is also lightweight, and lastly a stainless steel rod that anchors the fence into the ground while resists breaking when removed for storage.

You will notice the holes in the wooden deck where the fence should be placed. Simply unroll the fence and place the pegs in the hole. It is that simple. (SEE PICTURES)

The gate at the top of the stairs should always be kept closed and bolted.
