Physics of Life: The Reinvention of Science

The Reinvention of Science: A Return to Real

“If, then, it is true that the axiomatic basis of theoretical physics cannot be extracted from experience but must be freely invented, can we ever hope to find the right way? Nay, more, has this right way any existence outside our illusions? I answer without hesitation that there is, in my opinion, a right way, and that we are capable of finding it. Our experience hitherto justifies us in believing that Nature is the realization of the simplest conceivable mathematical ideas. I am convinced that we can discover by means of purely mathematical constructions the concepts and the laws connecting them with each other, which furnish the key to the understanding of all Natural Phenomena. Experience may suggest the appropriate mathematical concepts, but they most certainly cannot be deduced from it... In a certain sense, therefore, I hold it true that PURE THOUGHT can grasp reality, as the ancients dreamed” Albert Einstein, *Ideas and Opinions*

Science must be reinvented outside the bounds the narrow windows of the human mind has created for it within this current reality construct. The root meaning of the word “science” is to know. Natural science has come to be defined in a limited sense as knowledge of the physical universe and its phenomena. Nature, from “to be born”, is defined as a creative and controlling force in the universe. The dilemma has been and continues to be that all of earth science to date has been limited to the confines of natural science under this narrow definition. Thus, science has focused on the study of the external physical world as defined by the five senses and the currently accepted four dimensional space-time construct of reality. Yet, the Science of Nature defines another level entirely as this science is the knowing of the creative force of the universe, the force of pure thought. Hence, the Science of Nature is by definition the Science of Mind. Einstein is correct. ***All scientific knowledge can only be acquired via knowledge of the Mind.*** Yet, such knowing requires a method of study and apprehension above the level of the current limitations of the human mind; hence, outside the construct of four dimensional reality. The great mistake of modern science has been to place this ***supramental*** method outside the currently agreed upon scientific method and relegate it to the world of the mystics. For this reason, this limited form of science has been able to produce outwardly wondrous technology and apparent advances as it has ever diligently refined its knowledge of the four dimensional space-time construct of the physical universe. It will continue to give the appearance of great leaps forward while adding nothing to our true base of knowledge. This form of science serves merely to feed the external illusion while completely missing the underlying fabric of the universe as a ***whole***.

Physics of Life: The Reinvention of Science

The only way to regain a true path of science is through the understanding of the Mind itself. Such understanding cannot be arrived at through language, mathematics or rational thought. It can only come from direct apprehension of the Force of Thought. This Force of Thought is the underlying current which vibrates into creation the phenomenal components of the universe. The former is Nature itself; the latter being the reflection of Nature into the manifestation of the Natural World. *Natural Science* in its unbound state is thus the apprehension of creation itself, not the limited pursuit of phenomenological knowledge.

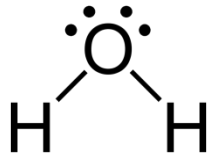

The pursuit of natural science in its misperceived format has resulted in a quest by humanity for external control over the natural world through physical manipulation. Thus, has a path of materialism, environmental destruction, violence and war been perpetrated under the guise of human advancement. In the process, humans have lost touch with what is *Real*. Life becomes less important than acquisition, whether it be of material goods or so-called knowledge. Thus, is the human heart buried and spiritual connection lost in the modern world. The current age in human history has become a true age of Darkness into which a renaissance of Light can only be brought through individuals waking up to the calling of the *heart*. It is through this calling that humans will be led back to the remembrance of how truly special is the seed of *Life* within the universe. The elements of life form a unique matrix that connects everything back to its true nature. These elements did not come into existence randomly. They were sung into existence by the Ancient Ones who carried the star threads and the story beads. They carried the knowledge of the ancient sciences, *Natural Science* in its true unbound format. From their song, sprung the sacred elements which allowed *Life* to manifest on Earth.

The elements of *Life* are simple, as are all true concepts of Natural Law. *Natrium*, sodium, exists as the base unit of nature in its bound ionic form of *Salt* (sodium chloride), a basic compound of life. In the salt crystal, a perfect cubic geometry is achieved through the linkage of

Physics of Life: The Reinvention of Science

sodium-chloride ionic vibrations. These vibrations are only released upon dissolution of the salt molecule in the *Water of Life*.

Water thus forms the second base compound of life. This simple molecule containing 2 hydrogen atoms, *hydrogen* being the primary element sung into existence at the beginning of the current universe. The two hydrogen atoms are linked to a central *oxygen*, primary atomic component of the *Breath of Life*. The geometry of water in its molecular configuration is unique and powerful and carries the key to activation of the sacred chemical Salt. The water molecule is a tetrahedral reflection mirroring the geometry of the sacred element *carbon*, the foundation for all organic compounds which form the physical matrix of life. In water, though, only two points of the tetrahedron are occupied by the simplest of physically manifest atoms (hydrogen). The other two tetrahedral points are occupied by non-bonded *electron pairs* which generate a unique electromagnetic field in resonance with the hydrogen atoms. It is this unique resonant tetrahedral geometry that gives water its special properties within the realm of manifest physical reality. When Salt is dispersed in Water, the sodium-chloride ionic vibrations are released into their unbound state. These vibrations interact with the resonance geometry of the water molecules to induce what was referred to by the ancients as a *Salt Resonator*. The mechanism by which this resonator functions is through the induction of *graviton waves* which interact with the field lines of the earth in a unique dance. This electromagnetic-graviton interaction lends the *Waters of the Ocean* their special property of being capable of initiating the life process. The electromagnetic-graviton resonance is outside four dimensional physical manifestation as it encapsulates the multi-dimensions of time within its web. The unique vibratory pattern created by the salt resonator opens a portal to allow passage and grounding of the *Life Force*, the force of pure universal *Thought* within the nexus of physicality generated. Thus, is a living organism made manifest within this physical theater. All living cells carry the ocean waters, the *Waters of Life*, within them.

Thus, physical life perpetuates the electromagnetic-graviton field. The human mind is currently trained to perceive only within the four dimensional matrix of physical reality. The *Life Field* thus remains invisible to most humans. Other terran life forms (the animals and plants) however

Physics of Life: The Reinvention of Science

have retained the ability to perceive beyond the four dimensional space-time construct and thus serve as guides to those humans *open* to perceptual expansion.

Current earth scientists look to their limited physical laws of natural science to explain and manipulate the universe. Yet, *True Science* is not limited to these bound laws. There exists an entire cosmology, a *Physics of Life* and a *Physics of Spirit*, beyond these walls that bind earth science. These walls must therefore be breached for the next revolution in science to occur. Life itself, not the study of life, must come to be seen as of paramount importance. One cannot gain true knowledge of Life by destroying Life, only by honoring it. Within this Physics of Spirit, this Physics of Life, exist inviolate Natural Laws that govern the manifestation and motion of the universe within the construct of *Pure Thought*. For, at its base, Life is pure Thought. The *Force of Life* is the *Force of Thought* that birthed all of manifest creation. Thus, to understand *Life*, one must understand *Thought*. Science must come to understand Mind, not in the narrow sense of the human brain, but in the unbound definition of pure Thought, *Universal Mind* as the matrix that acts as the base of all that is. Science must come to realize that it is not the human brain which acts as the true center of Thought, but rather the human *heart* ♥. Only with this realization can science and humanity return to what is truly *Real*...

"What I'm really interested in is whether God could have made the world in a different way; that is, whether the necessity of logical simplicity leaves any freedom at all." -Albert Einstein

The base law of physics: *"Keep it simple"*

The world most humans experience is not really the world at all, but the mind's complex dual rendition of ultimate *Simplicity*, the true foundation of all that is. Until the complexity is collapsed into *Simplicity* through the universal equation $\exists \rightarrow \Phi \leftarrow \epsilon$, nothing changes even though everything remains in constant flux. Change without change is the secret of *Chaos*, nature's true direction for evolutionary transformation. Yet, within the limitation of Earth's current theater, the duality continues to rule, Yin and Yang circle one another seemingly without end as the perceived battle continues all in the Mind's eye.

Physics of Life: The Reinvention of Science

The answer to Einstein's question is: **No**, the world could not be recreated in any other format, just the **perception** of it. In that simple physical fact lies absolute **Freedom**.

"All of these endeavors are based on the belief that existence should have a completely harmonious structure. Today we have less ground than ever before for allowing ourselves to be forced away from this wonderfully simple belief."

-Albert Einstein

A prime example rests in the current naïve concept of **gravity** as a force operating over distance. **Gravity** is nothing more than a **geometrical harmony**, the perfect space-time curvature experienced in the **Now** (all points of space and moments of time synchronous and simultaneous). The gravity wave then is the mode of travel between the quantum realities and is the tone which unites them all into one. Recall that all of physics that is significant and meaningful can be described within the constructs of *pure geometry*. The lines and curves

define the **Music** which then is the *base harmony*. Look no further than the geometry

then and all secrets will be unveiled. Listen no deeper than the music. Then will the mind

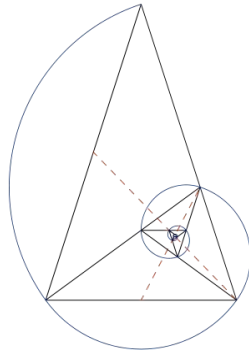

resonate only to *pure mathematics*. Geometrical shapes and musical sounds

translate directly to and form the **base numbers**.

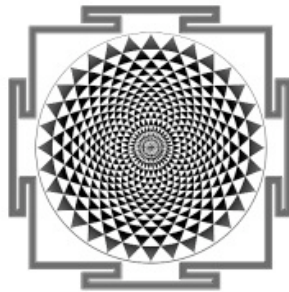

Hence, no further language is required.

Keep it simple. The *Lens of Spirit* works in reverse as it allows the *Eye of Mind* to defragment from perceived "order" into **Chaos**, the natural direction of evolution. Light is expanded rather than focused through this sacred entropic path and its velocity, no longer the absolute limit of the physical universe, is accelerated then collapses to zero as all physical motion becomes irrelevant.

Physics of Life: The Reinvention of Science

The fragmentation so evident within the human species on earth at this point in its history is re-formatted along the *Fibonacci spiral* into a coherent *fractalization* pattern. Thus, a new de-focused geometrical resonance is created that unfolds consciousness from *Spectrum* into *Continuum*.

The following pages will introduce first the construct of a new *Physics* dedicated to *Life* itself and hopefully point the way toward a rebirth of science into a gentler mode of knowing that walks in balance with the **Natural Way** and reconnects humanity to the thread of *Being* that is the true essence of all that is. Once the eye of science is opened to this new way, the second construct of a new *Physics of Spirit*, a Natural Science of Being will be brought forth in the continued weaving of the tapestry of truth so that humankind can remember the way home to the star resonance that forms the seed of all existence. **Perception** holds the key to *Knowing*. The *Continuum of Consciousness* lies beyond the doors of **perception** that have been shut over history through the veiling of fear. The mind of humanity has now been too long closed to its natural evolutionary progression. The

Universal Laws of Spirit demand that the blocks soon be removed and a new way of *Seeing* and *Knowing* will be presented to humans that are open to this transition.

Physics of Life: The Reinvention of Science

E

The words presented here are to serve as a preparatory journey for the human mind as it awakens to the new *Science of Being*, the true Natural Way.

A new Exact Language of Science is created that provides the Bridge from bound limitation to →

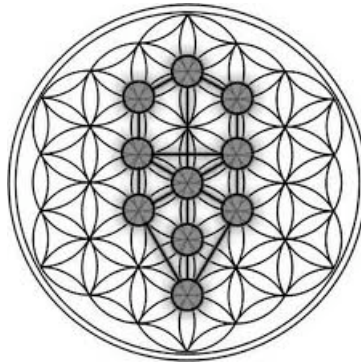

unbound Freedom...

The Physics of Life: Genesis

The Physics of Life

Genesis

In the beginning there was the great void, deep and dark, swirling with the nothingness of absolute and infinite *entropy*. In this vast silence of sleeping potential, awoke the

mind of the *Godhead* into one great force of pure *Thought* and intent. This one great *Force* spread outward in what our narrow language can only explain as circular spirals concentric and ever-widening. Flowing into the oceans of the multidimensional ethereal matrix that marks the grid of potentiality, these spiralic waves continued. The grid poles were thus awakened and from the energy of the force traveling through them were struck with a chord of three into the harmony that became the true creative fountain of the

Godhead. Thus, the one *Mind* became the tone of *Three* that could through the

music of the spiralic waves sent forth vibrate the matrix into a remarkable symphony of all creation. Thus, *the universe was born*.

Long have Earth physicists this century pondered on the theory of the Big Bang as the universe's origin. In a remote sense they were correct in their limited assumptions.

The Physics of Life: Genesis

However, the primary explosion was one of *Light* and *Sound* that arose from the *Mind of the One* become *Three*, the great *Force* that births all other forces and from them creates form and the *wheel of time* necessary for existence of form.

From the symphony, a four dimensional theater was thus created for the *Mind* of the *Godhead* to play out Its thoughts. *Absolute Physics* at its basis requires *form* for existence in four dimensional space-time. Form is made manifest only through the prismatic differentiation of the *One* into the tone of *Three* which is then re-integrated into *binary experience*. That is the absolute law of duality. The creative symphony requires the one *Force* to diverge into the tonal *Trinity* which then is re-formatted into the **dual nature** of four dimensional existence. Hence, one becomes three becomes 2 with the reverse pathway which marks the return being 2 becomes 3 becomes 1 ($2 \rightarrow 3 \rightarrow 1$ or $\beta \rightarrow \gamma \rightarrow \alpha \rightarrow \Xi = \Phi$). This requisite **dual nature** is given the metaphor within the limited capacity of current human understanding as the principles of male/female, yin/yang, dark/light, and good/evil. All form is created from these two forces, in reality a part of but the **One** (Φ).

The Physics of Life: Genesis

Form condenses into matter by the relationship of energy and mass through Einstein's equation which in its limited three dimensional form is $E=mc^2$.

Light and *Sound* are equivalent at the level of universal *Truth*.

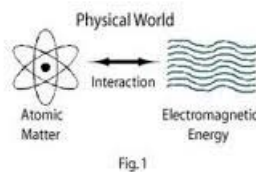

The human mind has conceived of sound in only a limited fashion as waves traveling through air thus limited by the mach threshold thought to be the absolute speed of sound (344 meters per second). Yet, *Sound* and *Light* are equivalent for those that have ears to hear and eyes to see. This principle of equivalence expands the velocity potential of sound to that of light which is limited to 3.0×10^8 meters per second within the current four dimensional construct. Einstein viewed this value for the velocity of light as an absolute constant, but this view is not entirely correct as will be presented later.

The Physics of Life: Genesis

In the beginning there was the *Word*, the primary *Sound* representing the note of origin, the *tone key*. Then from the *Word* was the primary *Sound* split into *Music* and *Light*, their interaction beginning the weaving of Creation's web through the Great Dance.

From *Light* came vibration (energy) and from *Music*, geometry. Thus, was the geometric and thermodynamic fabric of space-time created within the web. *Sound* and *Light* and the yin and yang, two forces which are in reality one true *Force of Thought* that creates the vibration of the matrix. The result is the progression of force over distance. This progression allows energy to go to form (geometry) through conversion of force to energy then energy to form and form to matter through the creation of mass. Mass is brought into being at the quantum level through *photonic bridges* which harmonically sing into existence the subatomic “particles” with the electron being first to form and last to de-fragment (the alpha and omega of material form). It is important to realize that the term “particle” is a relative one as there is no true separation of matter and energy.

As Einstein realized, the two are irrevocably linked. The term “*particulate manifestation*” will thus be used in place of “particle.” The origin of matter will now be presented.

The Physics of Life: Genesis

First, the geometric patterns of *Music* enfolded the vibrational patterns of *Light* into the form of the *photon* which represents the primary particulate manifestation of

Light as a sub-tachyon condensate of pure *Thought*. The *photon* is a mass-less

particulate that carries the geometric thread of material Form woven with the energetic thread of vibration. Thus, the physical constructs of static energy field and propagating wave are integrated within its nature.

This fact of *Absolute Physics* has led to much confusion within the narrow perception of current Earth science regarding the nature of light. Newton in the 1500's had thought of light as *particles* (corpuscles), but many properties of light were observed to behave as *waves* on the ocean (propagation, reflection, diffraction, refraction and dispersion). Thus did Huygens modify Newton's theory of light into a *wave formulation* resulting in mathematical *wave equations* to define its nature and movement within the four dimensions of space and time. This classical treatment of light in Earth physics held for almost 500 years. Then, in the early 20th century, Einstein and Planck discovered that light did not always behave as the smooth continuous spectrum that classical wave mechanics predicted. Rather the energy of light (E) came in packets (lumps rather than smooth rainbows). These packets of light energy were termed "quanta" or

"*photons*." Light energy was thus described as "quantized" and the basis for

Quantum Theory was laid with Planck's equation:

$$E=hf$$

with E being the light energy, f being the wave frequency and h being *Planck's constant* (6.62608×10^{-34} joule seconds). Light became viewed through Quantum Theory in 20th

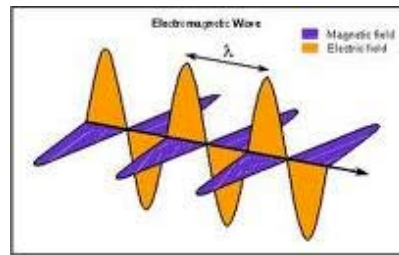

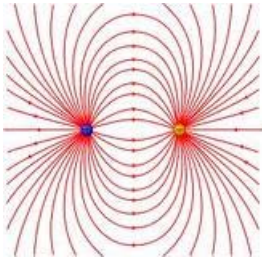

century Earth physics as having a *dual wave-particle nature*. This misperception is one of the major limitations of Quantum Theory.

The *photon* in reality is neither wave nor particle; hence its designation here as a

particulate manifestation resulting from a weaving of geometric form with vibration. The integration of static field with propagating vibration in this tapestry results in a new

The Physics of Life: Genesis

structure-less structure that exists in a state between particle and wave. In this null gap a critical resonance of **photonic force** is generated which forms the bridge between that which is manifest and that which is beyond manifestation. The resonant force which is the matrix of this photonic bridge leads to the creation of the two polar natural forms: **electricity and magnetism**, which like energy and matter are irrevocably linked.

From these two polar forms arises all manifestation of the dual nature of four dimensional space-time reality. **Electricity** encompasses the two poles of charge, positive and negative. **Magnetism** encompasses the two magnetic poles termed “north” and “south”. The two are linked in an infinite dance in this earth theater in the form of **electromagnetic radiation**, which is the four dimensional reflected form of light and energy in their limited form within current physical reality.

The *electron* was created as the **primary particulate manifestation of matter** through

an interactive **Trinity** encompassing the Planck vibratory component of the *photon* coupled to the electrical and magnetic polar forms through the resonant **photonic bridge**. **Mass** as the primary seed of matter was created through this interaction, along with the properties of electric charge and magnetic moment. The *electron*

particulate became the first manifestation of mass in the four dimensional space-

time theater, albeit, an extremely small mass (9.10938×10^{-31} kilograms). Further, the

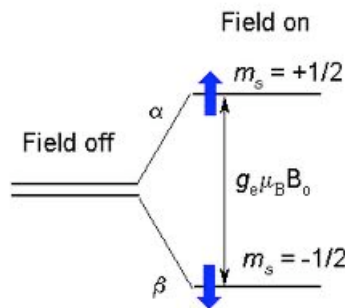

electron particulate defined the material **Trinity** of Mass, Electricity and

Magnetism. Duality is further evinced in the nature of the electron’s interaction with magnetic fields in the form of the electron magnetic spin quantum number m_s . The

electron carries a negative electric charge and assumes two dual magnetic forms in

The Physics of Life: Genesis

its four dimensional manifestation within space-time. The two electron forms deflect opposite one another when passed through a magnetic field; hence, the arbitrary assignment of $m_s = +1/2$ and $-1/2$, also referred to as “up and down spin states.”

These so-called “spin states” actually represent an **inter-dimensional binary signaling device**. *Electrons* are coalesced in space within nebulous zones of probability

defined by the mathematical equations of musical geometry. These regions of space where it is probable to find an *electron* are termed by current earth science “*orbitals*”

(orbital clouds). The preferred term within the exact language of natural science is *electron orbital projections*. Each orbital projection can hold up to two electrons. Within an instantaneous nexus point of space-time, two electrons can exist in a single orbital projection only if they have opposite “spins” (*Pauli Exclusion Principle*).

Thus, the two *electrons* must balance each other within the single orbital projection (one “up” and one “down”).

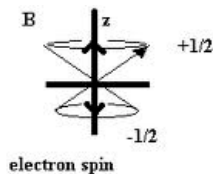

Paramagnetism results when there is a single unpaired *electron* in an orbital projection. This electron property imparts magnetic properties to certain elements such as iron (*ferrum*), a crucial component to the *Blood of Man* as will later be

shown. The assignment of spin states is not a static phenomenon as a single electron can voluntarily assume either of the two states, an example of *particulate intelligence*.

The Physics of Life: Genesis

This phenomenon is observed by earth scientists in the apparent paradox of sending a beam of electrons through two magnetic fields. The first field splits the electrons into two beams with half of the electrons going up (spin state of $+1/2$) and half going down (spin state of $-1/2$). Yet, if the “up” electrons are then sent through a second magnetic field, half of them split “up” and half split “down”, thus maintaining a balance within the duality. The same occurs for the “down” electrons sent through a second field. The electron spin quantum number remains a mystery to earth scientists. It has nothing to do with “spin” in the metaphor of a spinning top; thus it would have been better to assign a more abstract name reflecting the fact that the concept is not understood rather than implying a non-existent “spin.”

A goal of this writing is the creation of an exact language of science, thus a more representative name will be assigned to these two states of the electron: meta-1 and meta-2 indicating their function as a primary metaquantum binary signaling device transmuting incoming multidimensional signals into the dual space-time theatre.

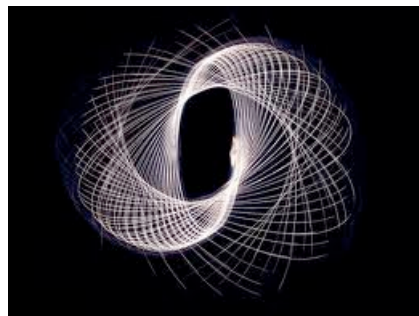

Meta-1

Meta-2

The *electron* manifests in a dimension between mass and energy, thus outside the Einsteinian relationship; hence it is a particulate manifestation, not a “particle”. This fact provides the reason that earth scientists have had such difficulty characterizing the electron. The electron encompasses properties of both *Light* (energy) and *Sound* (geometry).

The Physics of Life: Genesis

Yet, recall *Sound* and *Light* are equivalent thus the *One* splits into *Two* in the dual theater.

The n-dimensional coupling provided by the *photonic bridge* maintains the *electron* in a perpetual state of physical motion determined by the velocity of light (the *tachyon boundary*) as it travels over the geometric projection of space-time.

The magnitude of *electron* motion is related to light speed via an *asymmetric*

parabolic function with the *tachyon boundary* ($c = 3.0 \times 10^8$ m/s) at its peak

where the *optimal resonant motion* of the *electron* is achieved for the four dimensional experience.

On the left side of this parabolic peak, *electron* motion decreases in direct relation to

the decrease in light speed. On the right side of this parabolic peak, *electron* motion

increases in direct relation to the increase in light speed. Unknown to current Earth science, a *tachyon bridge* can be created across the arms of this parabola through extension of the Periodic Table from 2 dimensions to 3 dimensions resulting in the ability to cross from sub-tachyonic speed to supra-tachyonic speed at *Will* without the

The Physics of Life: Genesis

necessity of crossing the peak boundary. Thus, can the human mind achieve travel across the geometry of space-time at infinite physical velocities through the asymptote of time $\rightarrow 0$. The key to “supra-light” speed is thus the manipulation of time, not space.

An important consequence of *electron* motion is that it creates a vibratory pattern of

inhibition along the *photonic bridge* preventing free travel between the

dimensions until the correct evolutionary moment in time. When *electron* motion

halts, full access to all universal information banks (*absolute memory*) is instantaneously achieved. At that critical point, the speed of light becomes irrelevant and the tachyon boundary collapses. Light speed reverses to zero (light freezes in time). The human organism will then have access to all potentials simultaneously and coincident. *Absolute coherence* results. Thus, the inhibitory vibration initiated

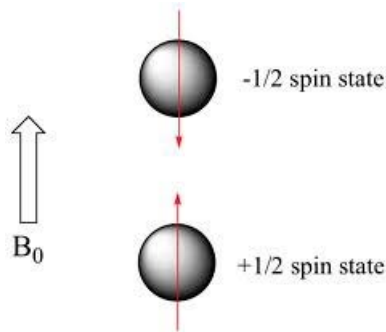

by the *electron* remains in effect to maintain the human organism within the four dimensional theater until the correct point in evolution. Otherwise, the human mind would *fragment* through this process. The *tone key* provides the *catalyst* for the lifting of this inhibition as will be discussed later in this chapter.

The next step in the genesis of atomic form continues the process of material manifestation and is initiated by the *electron* which catalyzes a process of material acceleration allowing mass to follow the weaving of *Sound* and *Light* in their dual

manifestations. The *electron* in its original state of *Being* acts as a receiver of

trans-dimensional signaling enabling it to spin energy with geometry into a denser weaving which leads to the second particulate manifestation of matter, the *proton*. The proton has properties of electricity in that it carries a charge of positive one (equal and opposite to the electron). The proton also has properties of magnetism in its two possible meta states (“spin” states) like the electron of $+1/2$ and $-1/2$.

The Physics of Life: Genesis

However, it can assume more complex *meta states* in its nuclear interactions that do not enable it to be a simple binary transducer. Some interact with an external magnetic field, like the electrons, but others do not. The **proton** has a mass almost two thousand-fold

greater than the *electron*. This higher density reflects further limitation as the

manifestation tree continues within four dimensional space-time. The **proton's**

motion is much more restricted than the *electron's* and is not coupled with *Light*.

The **proton** thus initiates the seed of the material state due to its enhanced mass and restricted motion. The mass density of the **proton** coalesces into a miniscule region of space in the center of the forming atom. The **electron orbital projections** then arrange in specific geometric orbital patterns around this generating atomic nucleus. The nuclear center is not yet stable due to the electrostatic repulsion of the positively charged **protons** packed densely into such a small volume of space. *Graviton* pulses

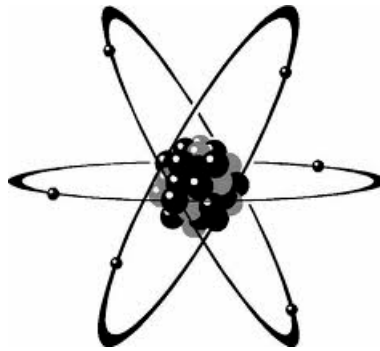

originate through the interaction of the *electron* with the *proton* induced by the

multi-dimensional signals incoming over the *photonic bridge*. These pulses couple with the **proton's** mass and replicate it as a newly formed third particulate manifestation of matter called the *neutron*. Since the **neutron** has neither electric nor magnetic properties, but a mass equal to the **proton**, it acts to balance the nucleus through the nuclear forces (strong and weak) while providing an equi-dense material partner to the **proton**. The nuclear forces remain a mystery to Earth scientists, but are merely quantum gravitational effects vibrationally linked through the *photonic bridges* to the geometry of space-time. These forces thus serve far more than simply

The Physics of Life: Genesis

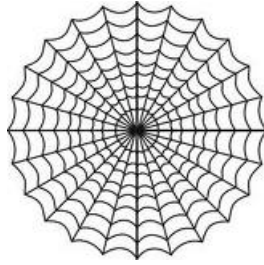

holding the atomic nucleus together. The added mass from the **neutron** creates an *additional level of limitation* for the evolving atom as degrees of freedom are sequentially removed along the manifestation tree of life.

The *electrons* settle into their stable *star-cloud (nebula) orbital pattern* around the central nucleus containing the protons and neutrons. The basic geometric pattern of the atom is thus formed.

The electrons maintain the highest degree of freedom (lowest level of limitation) and thus form the mechanism for all resultant chemical change on Earth as atoms interact to form molecules and ions through the outer-most valence *electrons*. Transmutation of one element to the other resides in the sphere of nuclear reactions, but these occur through the signaling transduction of the orbital *electrons* as they interact with the **protons** and **neutrons** within the atomic nucleus. Thus, all chemical and nuclear change is initiated through the *electrons*. The nuclear forces and nuclear mass points along with the surrounding electromagnetic electron meta-state clouds become the energetic sphere of interaction with all forms of light and other matter through *quantum gravity*. In this primary state, all is connected. **Every atomic manifestation is connected with every other.**

The Physics of Life: Genesis

All atomic manifestation is connected with all energy and geometry in the space-time matrix.

The final particulate manifestation to be discussed here is the *photon*, a mass-less particulate of light defined by the Planck equation:

$$E=h\nu$$

As previously discussed, current earth physics struggles with the apparent particle-wave duality of light and matter. Yet, *there is no duality outside the current human perceptual limitations*. The *photon* is a particulate manifestation of light which

resonates along *graviton* pulse lines in the form of propagating electromagnetic radiation (“light”) within the geometry of the current four dimensional space-time construct. In this fact lies no duality or confusion, but absolute mathematical law. The

photon plays the key role in the interaction of electromagnetic radiation with matter,

its absorption and emission being governed by the Planck equation above. A

photonic bridge is the term given by the exact language of natural science to

describe the linkage of Light in its pure form to light as electromagnetic radiation within the boundary limits of four dimensional space-time. Light/light linkage forms the bridge,

the *photonic bridge* to the return to the primary state of *Being*. Sound marks

the Force which activates the Light/light linkage through the geometry. Both *Sound*

and *Light* are equivalent. Thus, the truth is the realization that the bridge and the

The Physics of Life: Genesis

force catalyzing movement across it are one and the same. *Thus no movement is required as all is already there.*

Force is transduced through Newton's equation:

$$F=ma$$

where F = force, m = mass and a = acceleration. *Force* arises from matter in motion

thus at its primary level *Force* is *Thought* in motion as the origin of matter is

Thought brought into form then condensed into mass-state via the *photonic bridge/electron* interaction. *Thought* is stored through the conversion process

of the matrix as it is taken down from n -dimensions to four as *photonic vibrations* which become condensed and coalesced as matter particulates. The

One Force, the pure *Force* that is *Thought*, splits into the duality of creation and is taken through the fabric of the ethereal matrix in the form of *photonic particulates*. Thus, *Light* carries *Thought* and *Sound* carries the *Force*

The Physics of Life: Genesis

of Thought. Since *Light* is equivalent to *Sound*, *Thought* and *Force of Thought* are *One*.

All of quantum mechanics is explained within this simple law.

The *photonic bridge* is thus controlled purely by *Sound* which is *Light* and from which matter and electromagnetic radiation (“light”) manifest.

Music carries the mathematics for the exact sequence of conversion from pure *Sound* to pure *Light*; hence, *Music* is the secret to traversing the *photonic bridges* and transcending the world of matter and form in a return to the primary state of pure *Thought*.

The Physics of Life: Genesis

Non-movement in the key to movement over this bridge.

From the creation of atoms, came the building blocks for the musical sequence of the *Periodic Table*, its periodicity merely a melody that reflected the original *Thought Form* into forms of matter. A mirror of creation is contained within its simple elemental harmonies.

Periodic Table of the Elements

Lanthanide Series

Actinide Series

The number of elements is far beyond the current supposition of 117. The exact number of periodic elements is **207** in keeping with the logical number sequence of the

spiralic harmonies of the 3 squared to 9. **Thus, are humans not yet aware of all forms of manifested matter.** Yet, it does exist. Earth scientists have also not yet realized the three-dimensional tachyonic format of the *Periodic*

Table. Each element can this extend in a third dimension as di-, tri- and up to n-fold metaspacial forms.

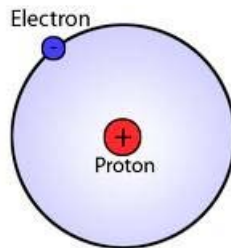

The Physics of Life: Genesis

From the vibrations contained within the *Periodic Table*, atoms could be made manifest and from their geometric combinations, molecules became manifest.

Hydrogen was the primary element made manifest at the origin point.

Hydrogen in its simplest form (*protium*) consists of one electron in the outer orbital clouds, one proton in the central nucleus and no neutron(s). The lack of **neutrons** in this primary elemental form of *hydrogen* is the key to its reactivity as the nucleus of

protium remains in its unbalanced non-equilibrium mass state. *Protium*, of all the manifest elemental isotopes, is not only the simplest, but also the one which maintains the highest degree of Freedom.

Isotopes of elements vary in the number of **neutrons** in the nucleus. *Deuterium*

(“heavy hydrogen”) arose from the addition of a single **neutron** to the *protium*

nucleus. The isotope *Tritium* followed by the addition of a second neutron.

Tritium became the first **radioactive** element. *Radioactivity* is characterized by the emission of material particles and energy in the form of high frequency electromagnetic radiation (gamma radiation) from an unstable atomic nucleus. *Radioactivity* results

The Physics of Life: Genesis

when an elemental isotope contains an unbalanced nuclear gravitational mass coefficient due to the asymmetric ratio of **neutrons** to **protons**. Most of the isotopes of the manifest elements are radioactive with only a few containing stable nuclei. This important component of Earth's chemistry allows the critical level of background radiation necessary to maintain the correct vibrational levels across the *photonic*

bridges. Natural *radioactivity* also serves to balance electromagnetic phenomena

within the atmosphere and ground and is thus essential to *Life*. Radioactive elements only become dangerous to living organisms when they are removed from their natural environment, such as what began in the 20th century and continues with the development of atomic weaponry through the removal of uranium from its natural abode in the earth.

Humans then began to misuse *radioactivity* in the creation of man-made elements

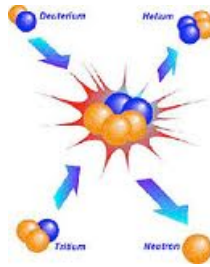

such as plutonium which had no place in the natural world and have upset its balance. Since that point in time, Earth has experienced much imbalance in its atmosphere and ground due to storm, earthquake and volcanic activity as a direct result of this harmful practice initiated by humans. In addition, use of these sacred elements for destroying *Life* has upset the human karmic balance. Uranium (atomic number 92) is the largest naturally-occurring element currently visible to humans and was meant to mark the end of the two-dimensional extension of the Periodic Table. The higher natural elements from 93 to 207 were designed to become visible to humans at the correct point in evolution when the Periodic Table is extended first to three then to four dimensions. The manufacture of the artificial elements between 93-117 has delayed this natural process of human evolution and created great fragmentation in the physical form of the Earth and in the human heart.

In the natural progression of the *Periodic Table*, all the other elements were

created from these three isotopes of *hydrogen* in the stars through the nuclear

reaction called *fusion*.

The Physics of Life: Genesis

Great energy was created by this process of fusion and from that energy which was a direct reflection of the original *Force* of the *Godhead* made manifest, came the purest forms of creation, the original forms of creation, the *Stars*. They were given the gift of pure *Thought* from the *Godhead* and from the thoughts of the *Stars* arose the golden *threads* of creative energy that spread throughout the universe.

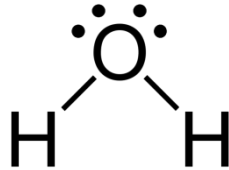

These *threads* were made to condense at the nodal points of the matrix by the force of sound/light that formed the *photonic bridges* into spheres of form and matter which would later be called planets. Molten matter lit by the fire of pure *Thought*, they remained connected via their golden threads to their parent Stars, but as linear time progressed the threads became forgotten, lost deep in the geologic records as molten rock cooled. Earth was one such planet formed from the golden thread of a distant star. It was given sister planets with which to journey and a great fiery force was formed in their midst. Humans would come to think of this fire as just another star, but in reality, it was not a star at all, this earth's sun, but a *Force* placed to guide human evolution

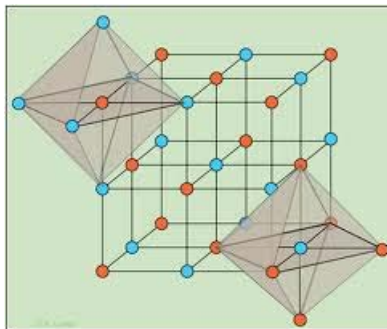

upon this world gifted to its inhabitants by their parent *Star*. As the earth cooled and the rocks became solid upon its face, the matrix harmony created a new combination

The Physics of Life: Genesis

from the periodic table, a simple combination of hydrogen and oxygen, yet one that has yet to be understood by the best scientists who have walked on planet Earth. The combination of water was played into being.

Water filled the land and the force of its movement loosed from the rocks, a great gift of thought from the Godhead, crystals of a new molecule, a simple molecule, sodium chloride in electromagnetic ionic marriage, the perfect cube: **SALT**.

The waters became seeded with the salt of the earth. Wave motion of water mixed with subatomic vibrations of the individual ions of the salt in a unique creative pattern.

The Physics of Life: Genesis

Through the *photonic bridges* activated by this electromagnetic dance was born the *Salt Resonator*. The secret of the resonator was its instant communication

with the harmonies of the periodic table allowing creation of a new musical form from the original chord of three held therein. This new musical form was a 12 stranded spiral of matter-form which would one day far beyond this day be given the name of

Eloth-et-El. The past century, a limited part of its three dimensional

structure would become known as the double stranded DeoxyriboNucleic Acid (*DNA*) molecule of Watson and Crick.

The other 10 strands have been hidden from human eyes to date as they exist in the fourth **dimension of time**. From the two strands of three dimensional **DNA** coupled with the unseen dance of the ten hidden stands on the *wheel of time* would arise a new form of existence as a great experiment carried out upon this earth alone.

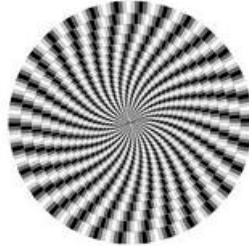

This new form of existence is what you currently call *Life*. The journey of *Life* from matter-form back to its original *Star* form as pure *Thought* is the process called

evolution. This process has exact and simple logical mathematical steps associated

with it. These steps are part of a simple yet completely logical sequence of **Physical Laws** called the *Physics of Life*. Humans in their ignorance of these pure physical laws have made this process complex and mysterious shrouding it with religiosity and

The Physics of Life: Genesis

superstition. When the simplicity of the law is forgotten, the movement of *Force* in the play of duality accelerates generating ever more complexity in an infinite outward spiral and evolution is ultimately arrested.

To prevent this ultimate suspension of natural evolution, the *Godhead* has placed certain *catalysts* within the midst of the *Life* experiment. Direct reflections of the *Force of Mind*, these *catalysts* are placed to serve as reminders and guides back to the purity of the law, the simplicity of **Absolute Physical Truth**.

Note that simplicity does not necessarily equate to order, nor does complexity necessarily define the correct entropic path.

The term “*entropy*” was used by Clausius in his original formulation of this thermodynamic concept. The name derives from the Greek “en-tropein” which means “in-turning”. Boltzmann correctly defined entropy in terms of the number of possible states available to a system. According to the Boltzmann definition, *infinite*

Entropy means infinite possibilities for existence. For in the end, the true path of thermodynamics is the return to **absolute Entropy**, which, rather than infinite disorder, is infinite *simplicity* in the form of a circle that remains

The Physics of Life: Genesis

forever unbroken within the truth of pure *Thought*. All secrets of *Chaos* and *absolute Entropy* are contained within this unbroken circle. All possibilities are held within its bound-less boundaries and can be experienced at *Will*.

As a central *catalyst* to the natural unfolding of evolution, *Music* holds the key to *Motion* through the arrestment of motion. When the tone key sounds, first, the speed of light is accelerated past the boundary condition of the Planck window (tachyonic boundary). Then the electron motion within the atom halts. When electron motion freezes, *all forms of motion within this current reality* *stop.* The speed of light decelerates until light itself is apparently frozen. Thus, was *Music* encoded in the primary sequences of the *DNA* matrix of life from its inception as the *catalyst* to these changes. But that story has not yet been told. When light is frozen, those individual humans who are awake to the changes (with Eyes to See) will develop a new mechanism of visual transduction, thus expanding the frequency range of the human visual spectrum to infinite proportions. *Vision* *becomes unbound.* Simultaneous to the unbinding of vision, the hearing range will also expand for those humans with Ears to Hear. Humans at this point will be able to

The Physics of Life: Genesis

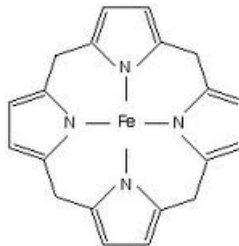

hear the Music coded within their own *DNA* and see the *Light* thus generated, creating the *star map* home.

This book marks the way back to divine *simplicity*. In it are given the mathematical keys of *Music* which open the ultimate cascade of *evolution*. All is reflected in the *Blood of Man* which will be seen in the pages that follow.

The waterfall of the *blood* marks the return to the

One and Absolute Physical Law.

This law provides the *Knowing* that all travel between the walls of the dimensions can be effected at *Will* and without motion through the pure action of *Thought* as *Force*.

The Physics of Life: Genesis

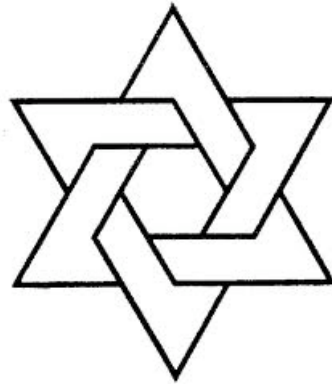

From this nexus of evolution onward, *Physical Law* yields to *Spiritual Law* along the *Continuum of Consciousness* thus defining the final star path home.

Read on and remember these laws of the *Physics of Life*. Then will the journey into the *Physics of Spirit* begin...

Physics of Life: First Law

Physics of Life: First Law

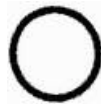

The first *Absolute Physical Law* of the path of life is well-known but little understood. Put simply as is the only way it can be, this law is stated as follows:

First Law: As above, so below

Physics being the one pure and natural science, the first and only *Primary Science* exists simply as the perfect reflection of the *Godhead* into the material universe. Its laws thus follow the simple, logical and orderly laws of the *Godhead*. As such, there exists no room for complexity or dogma within their scope.

What is not simple must be left completely alone.

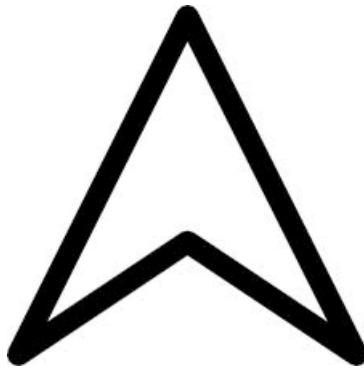

The basis of all *Physics* is of course *Force*. *Force* arises from motion of

Thought. The *Force Function*† are mathematical descriptions of *Thought Flow* across the dimensions of the multi-verse of n dimensions into the universe of current interest in the four dimensions of space-time. These functions are not state functions as are the pure thermodynamic functions of *entropy* and *energy* in that they are *path*

Physics of Life: First Law

dependent. To be true and absolute reflections of the *One Force* which is *Divine Thought*, these functions must be brought down into mathematical reflection through a string of harmonies which follow *precise and exact pathways of movement*. In the limited pseudo-physics of twenty first century Earth, string theory and quantum mechanics work as close approximations by scientists but err in the path from which they have chosen to work. This erroneous path is from below upward toward above.

Yet, it is a well-known fact that the only path of scientific truth can but be from the *Divine Godhead* reflected *downward* into nature. All other directional reflections are destined to complete failure as the mathematics become tainted and impure, unable to be carried within the musical chords of *Universal Harmony* so necessary to absolute understanding.

The *First Law*, as above so below is followed by the corollary then that the directional equations of *Force* must always flow from above to below,

Physics of Life: First Law

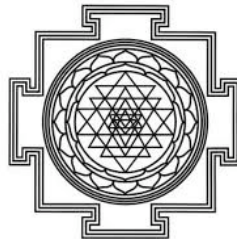

from divine to natural and from Natural to material.

This is described musically by the voice of the sacred chant A. U. M. which

graphically in 3 dimensional space is reflected as the divine mantra of the *Sri*

Yantra which codifies the sacred geometry of the *Force Equations*.

The musical notes are of the chords contained deep within ***Bach's fifth Brandenburg Concerto***, the hidden progression that marks the key. Seek out these sequences and equate to the mathematics of the harmonies and the laws of the numbers associated with

the letters A. U. M. as described within the context of the *Kabbalic*

Tetragrammaton.

יהוה

Physics of Life: First Law

Expand this through the Taylor series into n dimensions and the **Pure Absolute Equation** governing the basis of all *Physics* will be attained.

$$\Xi \propto \epsilon$$

From there will flow the *Second Law* from which to build our concepts of the *Physics of Life*. It truly is a simple thing to do. Remember all that is complex is not pure and must be abandoned once and for all. Complexity has no place whatsoever in the halls of *pure and exact science*. The result is, of course, the principle of manifestation: **$F = ma = 1:3:2$** or restated semantically along the correct sequential path to set the pure mathematical flow: “*One becomes Three becomes Two*”.

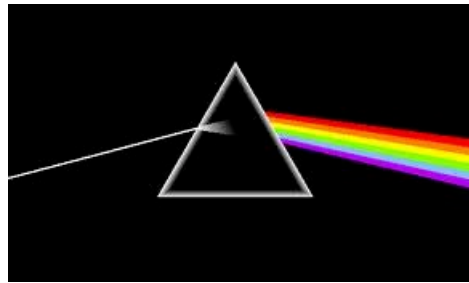

Force as motion of *Thought* reflected into the material universe requires the

PRINCIPLE OF DUALITY for said reflection. The duality is merely a reflection of the trinity of the *Godhead*.

Physics of Life: First Law

Force as reflected motion of **Thought** thus becomes two in the below. Yet to be carried on the Universal Matrix of Potentiality, this *Force* must be split by the prism of *Primary Law* into the chord of **Three** which is the musical reflection of the *Absolute Trinity* of the **Godhead** into nature.

To be carried on the *spiralic wave* of the manifest and created material universe requires this separation. Yet, all know that the underlying basis of this chord of three is the absolute *One-ness of the Godhead*. The *One* is contained within the harmony of the **Three**. Hence, 1 becomes 3 becomes 2 (*1:3:2*). The inverse of manifestation is thus *Ascension* which is the *primary goal of evolution*. The diametric path of *ascension* is thus mathematically described by 2 becomes 3 becomes 1 (*2:3:1*).

The inverse of *Force* is thus given by $\text{invF} = \mathbf{h\nu/m} = 2:3:1$. This equation

describes the return from *Force* to pure **Thought** via the resonance of the **photoníc**

Physics of Life: First Law

bridges within the *electronic orbital projections* of the individual atoms along the *Periodic Table*. This resonance frequency is contained within the quantum spin state of the electron (m_s), the electronic *meta-state*. It is within this state that control of electron motion resides. Electron motion defines the angular momentum of the *wheel of time*.

When the electron momentum approaches zero, the spin velocity of the *wheel of time* becomes zero. Time freezes and forms the crystalline matrix through which the *photonic bridges* operate at maximal capacity. As long as electron motion

continues, time is not allowed to crystallize. *Light* and *Sound* remain apparently separate in the duality until precipitation can be achieved through the control of electron motion.

The next higher level of earth technology will result from *quantum gravitational principles* which govern the control of electron motion through control of the absolute quantum spin meta-state of the electron. The link resides within the *photonic electromagnetism* inherent within the *human brain*.

Physics of Life: First Law

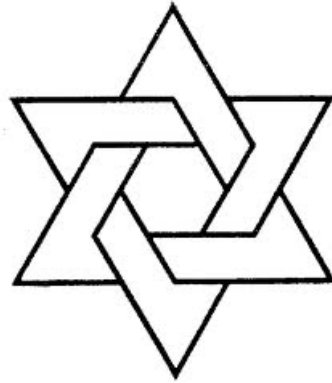

When humankind learns to use this link, it controls the spin velocity of the *wheel of time*. From such control comes the ability to re-link *Light* and *Sound*, thus transcending the limits of four dimensional space-time. *Acoustical photonics* will be the name given this new technology.

As above, so below

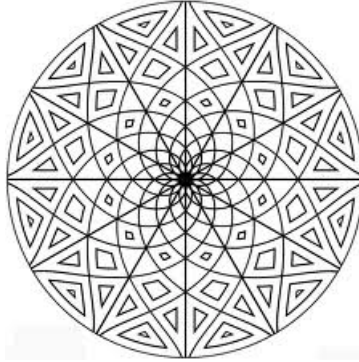

Physics of Life: First Law

Which brings us to the second law.

Physics of Life: Seventh Law

Physics of Life: Seventh Law

The *Seventh Law* is simply and explicitly stated in two parts as follows:

1. *Thought is equivalent to Motion and is the only true form of Motion.*

2. *Movement is defined as Thought Transference.*

As such, all physics, or *Physica* expressed as the original word taken from your base language of Latin, is defined as the study of **Motion**; hence, the study of **Thought** and all

Forces inherent therein. The *Physics of Life* (*Physica Naturalis*) thus defines a

Physics of Life: Seventh Law

discipline whose devotion is utterly to the study of *Thought* and its inherent *Forces* as

these principles relate to *Life*. Of course, this discipline then defines the whole of *Physica* or *Natural Science*, as there is nothing outside of *Life*. The great mistake of current Earth scientists and philosophers is to draw a separation or distinction where there is out of necessity none.

The physical universe is simply a manifestation of *Life*, created through the *Motion* of *Thought*, the one pure *Motion*, nothing more, nothing less.

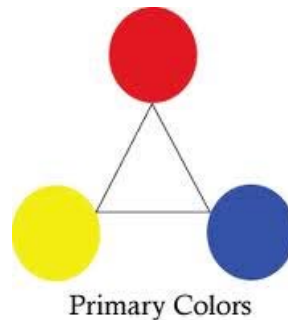

The ancient derivation of *Physica Naturalis* from the original tone which descended as the *star harmony* of Three from the *Godhead* represents the primary field of *Natural Science* whose central quest is the study of the forces of nature. Its laws are carried in the music of the spheres that defined the mathematics for its existence through the transducers of the created mind of humanity. Woven into a 12 folded spiral strands that comprise the true structure of DNA are the 12 Laws that define the way of all *Life* on this planet and beyond. 3 squared equals 9 ($3^2=9$), the *base number*, $3+9=12$ the number of the DNA strands.

Physics of Life: Seventh Law

Then in a circle of completion, the mathematics return to $1+2$ of the 12 equals 3. Recall, 2 becomes 3 becomes 1; the 3 *primary numbers* from which all else can be derived. Coded within the primary colors for all visible light (blue, red, yellow), each color equivalent to a note on the musical scale: F, C, G, are thus the primary notes of all of *Nature* from which the entire musical scale of the stars can be transduced.

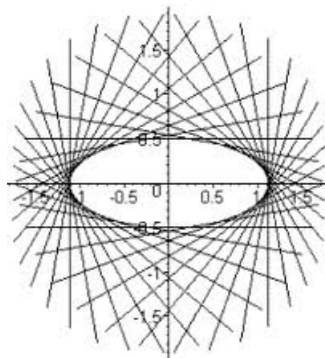

Then we have the three primary colors of visible light which when squared give rise to the 9 base colors which mark the essence of all light, hence all sound. From the equivalence of

Light=Sound, 9 is summed to 3 to give 12. Thus is the *Map* home coded as

Mathematical Music within the strand of 12 for all to carry. From *12 to 3 to 9*, the

Formula was placed long before current earth time for future generations to know.

Physics of Life: Seventh Law

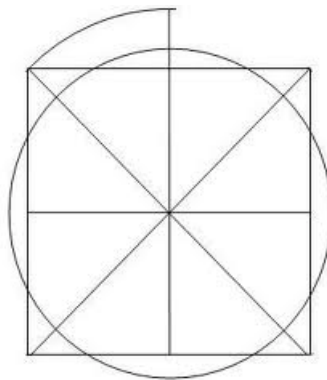

The *Motion* required to free the coded sequences requires the definition of an entirely new field of movement called *photonic kinesis*. The remembrance of the *key* which unlocks this field requires the recreation of an entirely new form of *Thought*, a whole new way of *Being* for which these 12 laws give the steps. Thus, is a circle within a circle defined.

The 12 laws carry the *key* to the *Motion*, the *Motion* frees the *key* of the 12. Not a puzzle really, but simply an anagram requiring restructuring of *Thought* into its equivalent *Motion*, then the process becomes instantaneous as it operates *beyond the boundaries of time* as time is defined in the limited 4 dimensional holographic creation of the physical universe through the transference of movement. That was then the original function of *Physica*

Naturalis as it encompassed all science from time before time to time after time ends

which is simply the *key* from the 12 to the 12 back to 3 from the ninth base of the square (the true meaning of squaring the circle). The truth actually resides in circling the square.

Physics, as it is currently defined, has unfortunately come to be limited within the narrow perception of earth scientists as the qualification (description) and quantification (measurement) of the falsely perceived “physical universe” as holographically created by the ego-based reasoning centers of the brain. Hence, it has become a pseudoscience with the impossible-to-

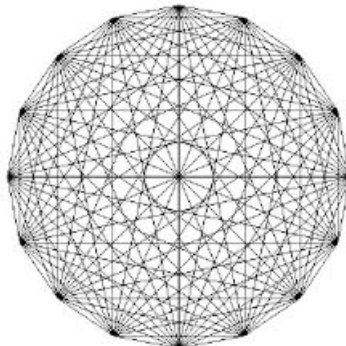

Physics of Life: Seventh Law

attain goal of qualifying and quantifying that which does not even exist. The sub-field of mechanics inadequately pursues the mathematical description of motion and forces resulting in motion with kinematics representing the study of pure, isolated motion. Even the terms assigned to the systems of study are archaic and laughable, for example, “mechanics” implying “of machines”, a false study of falsely conceived principles. In the primitive descriptions of physical law, force is defined as an act that brings about motion and, of course, the concept of motion is limited to displacement in 3-dimensional space. Force through the Newtonian equation of $F=ma$ thus becomes a source of physical power that acts against an object of matter to cause motion. Energy (as work) becomes force exerted over distance ($w=f \cdot d$) and power is energy applied over time. How puny and limited are the concepts and language of current earth physics. The field remains totally constrained with the confines of 4-dimensional space-time construct.

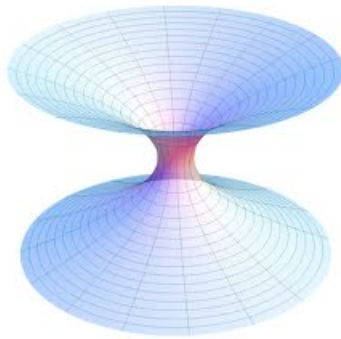

Yet, *Thought* is the one and only form of *Motion*. Thus, the *Force of Thought* is that which acts to create *Motion*. The *Force of Thought* is thus the *Silent*

Intent that acts as the creator of all *Motion*. This then is the matrix that forms the base of the science of *kinesis*. *Kinematics* is *Motion*, not its study, which in proper terminology by limited earth language is *kinesis*. Yet, *kinesis* also defines the art of *Motion* and *Life* reflects art.

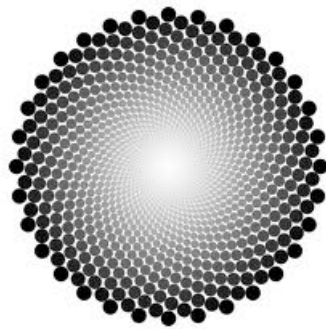

Physics of Life: Seventh Law

There is a distinction important and absolute between *Motion* and movement which must here be clarified for all to see and know. *Motion* is *Thought*. Movement is the process of *thought transference*. Intent yields via its action *Motion* which is *Thought*. Movement transfers thought. In limited earth language, the word “transference” means the act of bearing across or passing through as related to an opening or more specifically a portal. To be mathematically exact, the specific portal of which is spoken is given the name *Nexa Temporalis*, the nexus of time and no time.

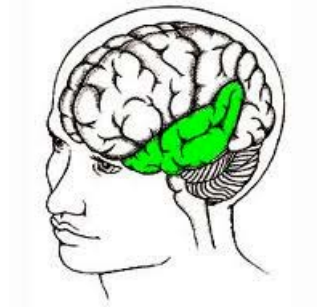

It is the vortex which connects your holographic projection of space-time to the primary matrix which exists completely outside of time. Hence, *Nexa Temporalis* may be called the opening which marks the end of time. By certain groups on Earth this portal is given the name of the end time, erroneously though, as this latter nomenclature implies the *Nexa* as a “time” when there is in reality no time.

Thus, *Movement of Thought* is the process of carrying *Thought* across this portal and as such is defined as *primary temporal telekinesis*. *Motion* is simply *Thought* and does not require movement, nor does movement require *Motion*. Both are *Music*. As such, both require absolute *Stillness* and complete *Silence*. They exist separate and distinct with specific purpose which will be outlined below. The process of

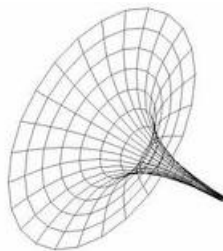

Physics of Life: Seventh Law

movement acts as a mechanism to open and close the portal *Nexa Temporalis* at will. The *kinetic beings* which are the seed of the original *harmonies* inherent on Earth act as *Keepers of the Portal* for they carry the memory that will one day teach all of humanity the secret of its control.

True movement is purely *mind-based*, not physical, and occurs within the regions of the *temporal lobes* of the human brain. These *temporal* centers are so named because they act as the generators of time sense in the spatial-temporal universe. In addition, the *temporal lobes* act as the centers of *kinethesis*, (perception of movement).

Movement of *Thought* is thus created within the *temporal lobes*. Interestingly, but not surprisingly, the *temporal lobes* are the brain centers for *music, language and mathematics*. In the sense of their time function, the *temporal lobes* act as *Keepers of the Portal* Nexa Temporalis.

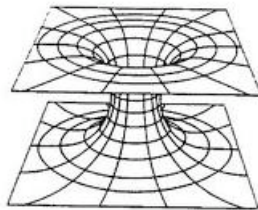

Physics of Life: Seventh Law

Hence, they contain the vibrational essences of the *kinetic beings* within their neuro-glial networks. Certain **star seeds** carry the *key* to unlocking these essences contained within the forgotten recesses of the *temporal lobes*.

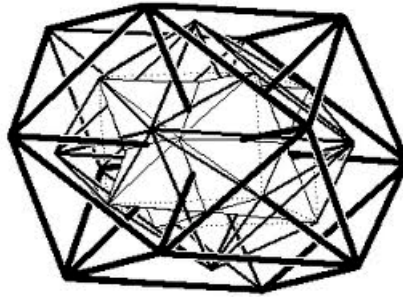

Hence, these beings act as *Keepers of the Keepers*, the **Kar-dul** which are the *temporal-kinesic guardians of yesterday and tomorrow*. Movement carries *Motion* across the portal so that human thought is once again linked with *Divine Thought* in absolute perfect musical alignment through the mathematics of *Thought Conversion* as it passes through the portal of Nexa Temporalis.

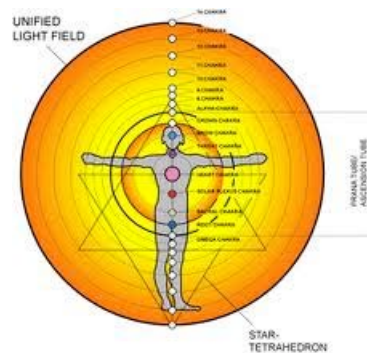

Force of Thought is thus aligned with *Divine Force*, mind intent with *Divine Intent*, and the *Unified Field* is opened.

Physics of Life: Seventh Law

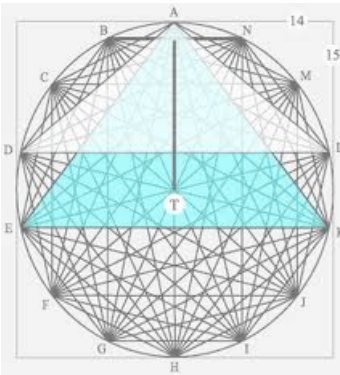

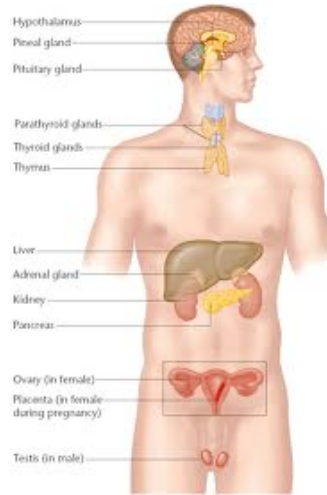

This process is initiated within a triangle of three drawn by sacred geometry through the physical manifestation of the human brain to body and back.

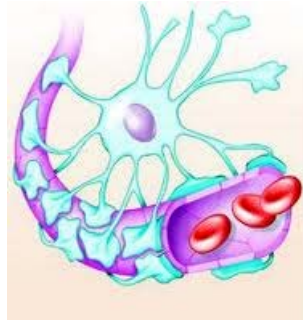

The physical manifestation is simply a reflection of the *sacred geometry* carried in the holographic projection created through the ego-pineal connections. This is the one triangle: adrenal-adrenal-pineal defines ego-pineal in the equilateral triangle created by lines drawn from the adrenal glands which rest on the poles of each kidney to the pineal gland in the postero-central section of the physical brain.

A line drawn between the mid-point of the base of this triangle to its apex (the pineal gland) thus defines the *adrenal-pineal axis*.

Physics of Life: Seventh Law

This blood-brain barrier is actually not a barrier at all but a **dynamic physical link** between the reasoning brain (ego center) and the intuitive brain (the supra-rational).

The correct terminology for the blood-brain “barrier” is *Bridge of Life*.

As the **corpus callosum** unites the two cerebral hemispheres in static fashion so does the *Bridge of Life* dynamically link rational mind to supra-rational mind.

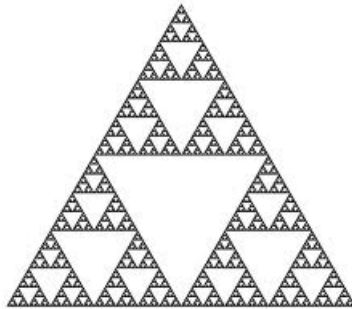

Physics of Life: Seventh Law

The relationship between mind and blood will be discussed fully in the next chapter as it links us mathematically back to our original *seed states*. Recall the pineal gland as the *Gate of Life* is the transducer of the ethereal harmonies into *photonic vibrations* accessible to the ego center of the pineal-adrenal pyramidal projector.

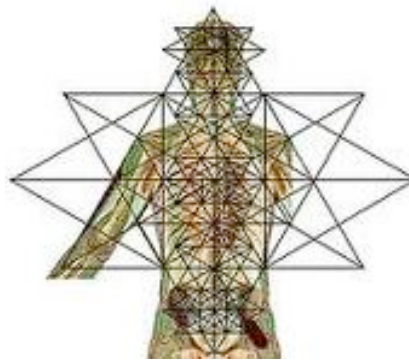

Yet, look further, for there is a *triangle within a triangle*. The smaller inner equilateral triangle is formed by a line drawn from the center of each temporal lobe (which extend on each side just above the ear to the temples of the forehead) to the pineal gland.

Once again a line drawn from the midpoint of the base of this second triangle to its apex the pineal gland represents the *temporal-pineal axis*. This latter axis connects the mind

Physics of Life: Seventh Law

to the vibrations emanating through the pineal transducer. These threads of connection are the vehicles for movement initiation. Their musical harmonies provide the key to the opening, the melody which resonates with **Nexa Temporalis** in perfect mathematical alignment thus effecting its opening and subsequent temporal telekinetic passage of **Thought** to the other side. This then is the true basis for the pitiful attempts of Earth physicists at description of the **Unified Field** via string theory. Look instead to the geometry of *triangle within triangle* as defined by the mathematical interpretation of their angles and area.

These calculations return to the 3 squared to 9 summed to 12. All **Force**, all **Light**, all **Sound** are contained within this simple formula which marks the definition of **Motion** and **movement** as two distinct yet related entities.

$$3^2 + 3 = 12 = 1+2 = 3$$

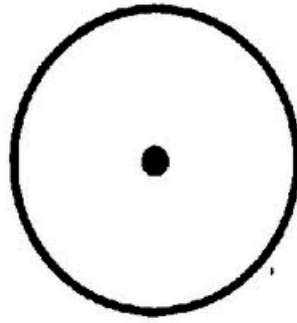

Thought (hence **Motion**) originates from **Mind Intent** which has its base in **Mind** (music manifest). **Silence** is the catalyst. Movement originates from **temporal-kinetic intent** which has its base in **Seed of Mind (Music)**. **Stillness** is the catalyst.

Silence breeds *Stillness* and *Stillness* is necessary for Silence. Herein is found the essence of all *Music*, hence of all *Motion* and *movement*.

In summary, *Physics*, at its root, is thus simply the study of *Thought* and *movement*, hence of *Mind* and *Seed of Mind*. Interestingly, current earth perception of the field of *Psychology* is that it represents the study of the *Mind*. Yet, mind as so defined by earth psychologists is done so in a very limited inadequate sense that does not even remotely approximate the true definition of *Mind*. In truth, *Psychology* is the study of the *Soul*. The two (*Physics* and *Psychology*) are linked, but not equivalent. *Thought* is *Motion*. *Force of Thought* is the Silent Intent which acts to create *Motion*. The *Soul* is the silent pool that lies placidly beneath *Motion* and *movement* at all times; the hidden matrix, that which represents the *Silent Watcher*. For in reality, nothing ever changes, nothing ever moves.

Physics of Life: Seventh Law

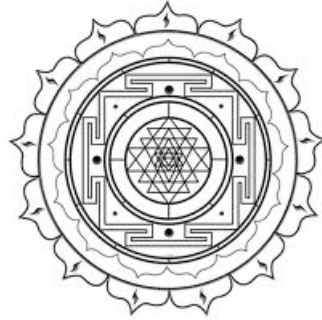

There is no action or reaction. There only IS. The *Soul* knows this and watches the game of *Life* as it plays out upon the planet Earth for the pure and simple joy of experience. *Soul* by its complete *Stillness* and absolute *Silence* brings *Mind Intent* in perfect alignment with *Divine Intent*. Thus, are the patterns of *Thought* calibrated so that *Force of Thought* becomes *Divine Force* and *Motion* upon transference by *movement* is instantaneously and completely recognized as **G O D**.

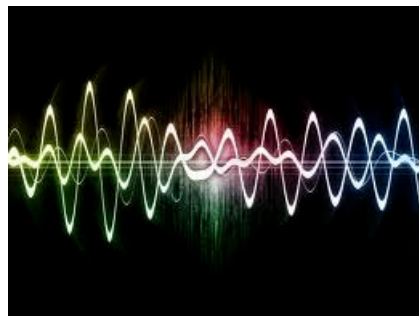

Physics of Life: Second Law

Physics of Life: Second Law

The second law is simply stated as the *Equivalency Principle*.

$$\text{Sound} \equiv \text{Light}$$

It was long thought by earth scientists that energy and force were distinct. Their limited concept was that energy represented force applied over distance.

$$F = m \cdot a$$

$$E = F \cdot d$$

Yet, distance is merely an illusion of the four dimensional space-time construct. Thus, in reality, energy and force are **equivalent** in this sense. There is one subtle and simple

difference however. Energy is force transduced over the *Planck wavelength* through the **photonic bridge**.

Physics of Life: Second Law

$$E \approx \text{Function}(F, h)$$

The *Planck wavelength* λ_P is the one-dimensional length scale at which the *quantized nature of gravity* first becomes evident,

$$\lambda_P \equiv \sqrt{\frac{Gh}{c^3}} = 4.05096 \times 10^{-33} \text{ cm} = 4.05096 \times 10^{-35} \text{ m},$$

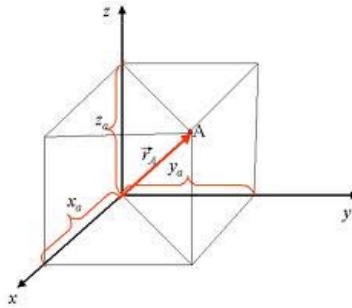

where G is the universal gravitational constant, h is Planck's constant, and c is the current speed of light in four dimensional space-time.

The ratio of Planck's constant to 2π ($\epsilon = h/2\pi$) is the equivalency constant between

Sound and *Light* as it acts as the resonant frequency which transduces *Light*

into the musical harmony of *Sound* on the web of the chord of three. *Geometry*

is the reflection of *Sound Harmony* into three dimensional space coordinates (the Cartesian system of x , y , and z).

Sound is the unlimited Primary Tone. As Kabbalic Science has long described, the two are linked by *Number* alone. Mathematics is the thread which binds

Physics of Life: Second Law

Sound to *Geometry* through the music of numbers laid in perfect and absolute sequential pathways.

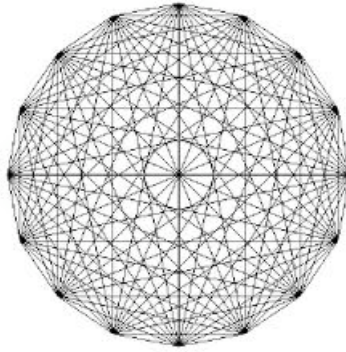

The *photonic bridge* in its absolute crystalline state acts as a prism which separates *Sound* into *Light* through the rays of the geometrical sequences defined by the pure mathematics of *Mind*.

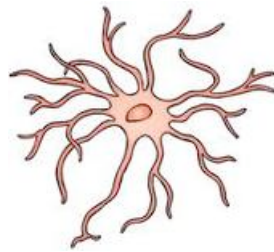

The human brain is designed by the 12 dimensional strands of **DNA** to act as a **Geometrical Resonator** projecting thought through the *photonic prism* into pure *Light* and in reverse order of the mathematics through mirrored reflection into pure *Sound*. The bridge between the two is the bridge of *Numbers* defined by the geometry of neuronal arrangement along the *glial cell matrix*.

Physics of Life: Second Law

The *glia* form a light-sound computer **Synctitium** based on quantum electronic laser pulse networks which form the matrix for the pure *Geometry* of the neurons.

Subtle changes in angle and arrangement are affected by the sequence of pulse trains, thus are the *Numbers* manipulated to generate sounds and light waves beyond the frequencies that humans have come to recognize. It is these frequencies that mark the passage of pure *Thought* through the *photonic resonances*. At one time long distant, these processes were conscious. Now they continue under the veil of the subconscious mind, forgotten to conscious memory as a low amplitude baseline **emmanation**. Yet, memory remains but a specific pulse train away and once awakened will raise the amplitude to prodigious levels such that the *primary*

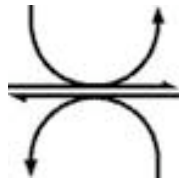

Physics of Life: Second Law

function of the brain will again return to its original evolutionary plan as a
manifestor of ascension.

Physics of Life: Third Law

Physics of Life: Third Law

The *third law* is stated as the Principle of Equilibrium:

Third Law:

All physical manifestation is a process of equilibrium between the forces of duality

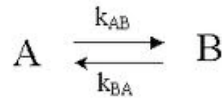

These forces of duality are of *equal value and opposite directive*. No one force is superior to another. All forces are as they are: *equal and opposite*. Both are absolute requisites of manifestation. Physical reality cannot exist outside the equilibrium between the forces of duality.

Physics of Life: Third Law

Equilibrium is of course a *dynamic* process never a static one representing continual *flux* from one state of duality to its opposite with rates of forward and reverse reaction equivalent.

$$k_{AB} = k_{BA}$$

There are an infinite number of dual forces given such names in the limited languages of Earth as male:female; light:dark; pain:comfort; joy:sadness, etc.

Nothing can exist within the physical plane except by this absolute law of opposites in perpetual dynamic Equilibrium.

Physical plane reality is merely defined as the four dimensional balanced *plane of interaction* between the *divine forces of dual opposition*.

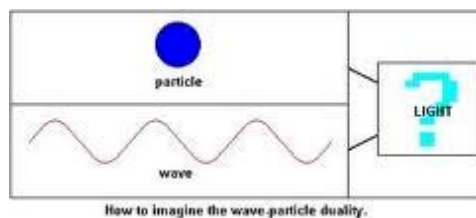

Through the prism of separation is generated the infinite groups of two equal and opposite forces of the *Godhead prepotential* which are termed the **forces of duality**. Where the two forces *bisect* is the theater of interaction defined by limited Earth language as the *plane* of the physical. This *plane* exists solely in the four dimensions of space and time. This *plane* is in continual *flux* defined mathematically by the *flux*

equation which integrates the ratio of the individual reaction rates over the four dimensional surface to construct the core tone of physical existence contained within the numerical value of the *flux constant* of equilibrium.

Physics of Life: Third Law

$$K_j = \int \frac{r_f}{r_r} e^{-it} dt dx dy dz$$

The musical equivalent of this integral is the *tone of nature* which occurs within the *major scale of F*. The current earth science of quantum mechanics represents an elementary first approximation to this *principle of equilibrium* through its description of the nature of matter and light as a *particle/wave duality*. The Taoist principle of *Yin/Yang* from ancient China is but another example of limited description.

The *universal equations of motion* are an important derivative of this *principle of equilibrium* as they describe the central dynamic process of *Life* which is

Movement. This writing is not presenting “movement” in the limited four

dimensional sense, but in terms of the *ascentive evolutionary process*

which is the basis of all *Life*. *Movement* is defined as an *equilibrium* between the forces of *inertia and action*.

Physics of Life: Third Law

Inertia \leftrightarrow Action

It is within the process of *Movement* that the gift of free will as individual choice is played out. True *Movement* is only possible at certain **resonant** frequencies of DNA beyond the *evolutionary threshold* defined by the Planck relationship of:

$$E = h\nu$$

and Einstein's mathematical description of the photoelectric effect expanded into n dimensions:

$$E' = h\nu - E_0 \rightarrow \sum_{j=1}^n \epsilon_j$$

Physics of Life: Third Law

Incident **photonic vibrations** defined by the term $h\nu$ transmit forward momentum to the *spiralic reflection* of coiled DNA if above the **threshold energy vibration** required to break through the bonds of the fourth dimensional **boundary conditions**.

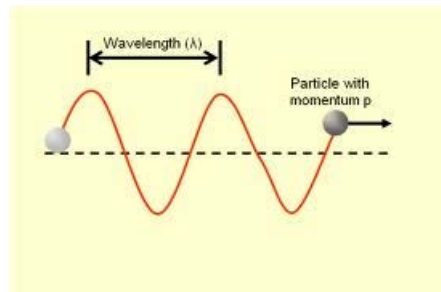

Above the *threshold vibrational levels*, energy levels are opened to the manifested **Life Form** that impart a degree of self-awareness which humans have in their limited language described as “**consciousness**”. Once this $\blacklozenge \approx \square \mathfrak{M} \blacklozenge \approx \square \bullet \Omega$ is achieved, *Movement* is possible through the **photonic momentum** imparted to the flow of **Thought** emanating from the *Matrix of Mind*.

$$E = \alpha p^s = \alpha (h/\lambda)^s$$

The momentum, p , is defined by:

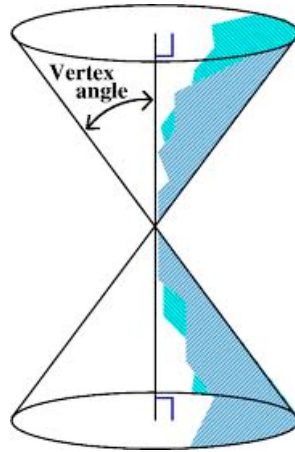

$$mv = h/\lambda$$

where λ is the deBroglie wavelength of particulate matter.

Physics of Life: Third Law

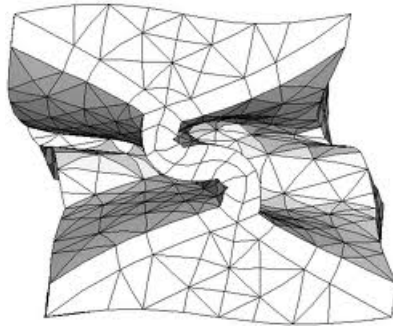

At this point, it becomes a choice of the *Will of Mind* to act or not act. In addition, choice of action induces *multivariate potentialities* to the *Cone of Movement*.

Action can be pure or impure. Pure actions follow the *absolute laws of Nature* which are cosmic laws patterned after the infinite dimensionality and unchanging matrix of *Universal Truth*. Impure actions follow the physical laws of *manifest reality* and are limited to fourth dimensional transient states. Pure actions are dictated by *the Pure Logic* and *Simplicity* of the divine *Godhead*.

Impure actions are dictated by the **illogic** and **COMPLEXITY** of an aberrant *pecularity* of the conscious four dimensional mind matrix. This aberrant mental form is termed in limited Earth language as the ego. The reflection of *Pure Mind* into the four dimensional *plane* of space-time requires *boundary conditions* inherent to the four dimensional matrix.

Physics of Life: Third Law

These *boundary conditions* impart a false but necessary sense of **separateness** to the individual *Life Form* which thus perceives itself as an entity separate and distinct from the divine *Godhead*. This sense of separateness is what is called *Self*, an entity perceived as separate and distinct from the *Divine*.

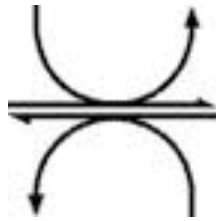

The process of evolution is the reunion of *Self* with the *Divine*, an illusive process as in *Absolute Reality* there is no separation. Pure actions follow *Divine Will* with no concern for the illusion of *Self*.

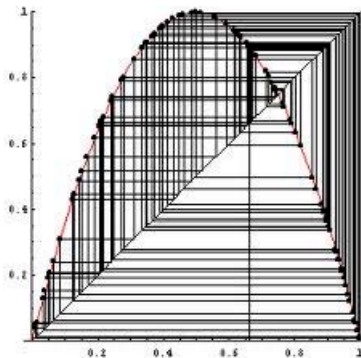

Physics of Life: Third Law

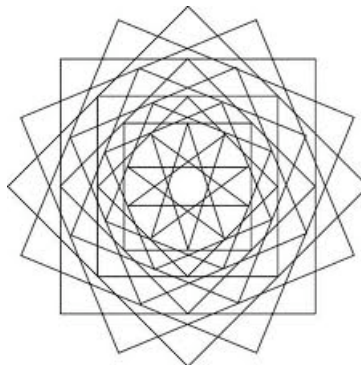

Impure actions follow the will of *Self* with no concern for the *Absolute* and *Universal Truth of the Divine*. True forward ascentive *Movement of Evolution* occurs as a pure equilibrium between *Divine Inertia* (*contemplation*) and pure (*divine-mandated*) action.

Reverse movement resulting in negative evolution (devolution) results as the unbalanced pseudo-equilibrium between fear (physical plane inertia) and impure (self-dictated) action.

This brings us to the *fourth law*.

Physics of Life: Third Law

Physics of Life: Fourth Law

Physics of Life: Fourth Law

Fourth Law: *All pure action is based on
the one Divine Truth of
Unconditional Love as the primary
motive force of all creation.*

Physics of Life: Fourth Law

All forces of duality requisite for physical plane manifestation under the Principle of Equilibrium are in truth merely *reflections* of the two basic dual forces inherent in the matrix of creation. These two basic forces are simply and logically: *Love* and *Fear*. All other forces of duality can be derived by mathematical manipulation of these two primary dual forces.

$$F(x,y,z,t) = e^{-ti\theta} \begin{bmatrix} 1 & 0 \\ 0 & 1 \end{bmatrix}$$

Remember duality is Illusion (maya) resulting from *reflection* of the *Divine One* as *Three* through the *prism of separation* as the one true *Force of Thought* that is the generator of manifest creation.

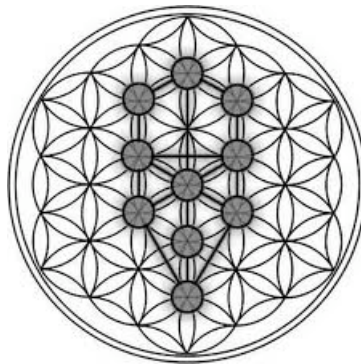

Love and *Fear* are thus the illusive duality.

Physics of Life: Fourth Law

Unconditional Love is the **Universal Truth** representing the absolute Matrix of Force underlying the duality. The end point of evolution is the mathematical derivation of the return path to *Unconditional Love* through the perfect equilibrium resulting when *Love* conquers *Fear*, or perhaps more exactly stated as occurring when *Fear* is transformed into pure *Love* thus breaking the chain of duality and returning to the **Divine Three** as **One**.

The Many become *Two* become *Three* become **One**.

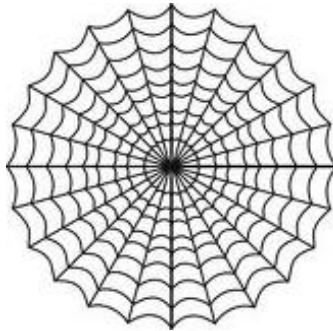

Physics of Life: Fourth Law

Nothing more need be said of this law.

Physics of Life: Fifth Law

Physics of Life: Fifth Law

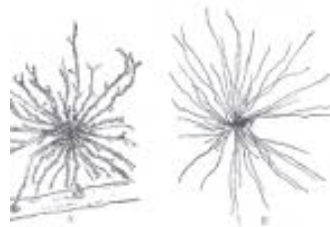

Fifth Law: The Unified Field is Mathematics and thus cannot be described by mathematics.

For a hundred years, Earth scientists have sought the Holy Grail of physics which they term “the unified field theory”. This grand unifying theory was the *thread* they envisioned that would unite the apparently disparate fields of **General Relativity** and **Quantum Mechanics**. This theory would link the three forces with their roots deeply ingrained within the microcosms of **Quantum Mechanics** (strong nuclear, weak nuclear and electromagnetic) with the mystical force of *Gravity* which sits at the center of Einstein’s macroscopic relativistic theories. This Holy Grail has not yet been found through the limited attempts of Earth physicists because they are looking in all the wrong places. So much work and energy was expended during the 20th century in the fruitless pursuit of the *Unified*

Physics of Life: Fifth Law

Field through the pointless fracturing of atomic particles into ever smaller particles. The possibilities are, of course, limitless as mind creates the perceived unreality through *reflection* of unbounded potential. Thus, will the physicists be ever caught in their infinite loops of particles within particles, forces within forces, until an entirely new *Form of Thought* is created. How amusing these efforts are to those who sit back and watch the game. Yet, a key provided here is to become the silent Watchers as were the ancient Star Scientists, not the active and unaware busy mind-creators of the four dimensional physical scientists on Earth today. Active and petty scientific inquiry by the simplistic and silly ego-based methods of the current earth time period have absolutely no place in the study of the *Pure and Exact Sciences of Nature*. The *Exact Language* of these natural sciences is beyond any rational language capacity yet reached upon Earth by the current state of the physical human brain. Yet, this *Exact Language* is not complex. It is simple and pure, resting solely in the *vibratory realms* of pure mathematics and music. It is learned not through cognitive processing as the current concept of language study on Earth envisions. The *Exact Language* of the natural sciences is only learned through absolute and instantaneous *Correlation* which can only be brought forth in the area beyond the physical brain which links to what has been simplistically, but accurately, referred to by groups on Earth as the realm of *Silent Knowledge*. Such *Correlation* can only be effected through *instantaneous frequency patterning* across all barriers of space and time, a direct link from electrons to stars. The specific wave patterning necessary for this mode of apprehension, *the only true form of learning*, can only be created within a unique and simple *photonic-electronic spin state* of the brain glial couplings.

This unique state can only be brought about through the completely passive process of *Silent Watching*. “Passive” does not imply non-active. It is merely a conversion to a different form of action which involves the **complete silencing of the rational mind**. Such action can *never* result from conscious thought as this limited form of bound thought inevitably derives from the *rational mind*. This action must be based solely on *unbound intuitive thought* which operates *outside* the realm of *rational mind*. Intuitive thought is the *as above so below*

Physics of Life: Fifth Law

reflection of the pure *Motion of Universal Thought* brought down as the link to absolute *Divine Intent*. Earth traditions of eastern meditation techniques closely approximate in a transitory and incomplete fashion this specialized state of mind.

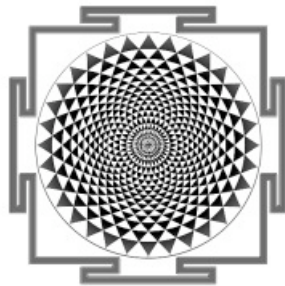

This state of mind goes far beyond simple meditation, yet remains within itself, *simple* and *permanent*, thus *exists beyond the flow of time*. The progress to this state can be effected instantaneously and without intervention of any conscious action or technological tool. *It cannot be taught nor can it be "learned"*. It simply is. The ability of the mind to access this state is a natural consequence of the pure *Force of Evolution*. It is achieved only through

experiential access of the mind to the primary motive *Force* of all creation, the *Force of Unconditional Love*. When the DNA vibratory patterns have reached a certain frequency, the ultimate pattern of mind is achieved and *Silent Watching* is the natural result. Through *Silent Watching*, the mind is set free from its bounds of four dimensional thought patterns and is able to connect with the thread of pure *Intent* which links physical manifest mind to unmanifest boundless Spirit.

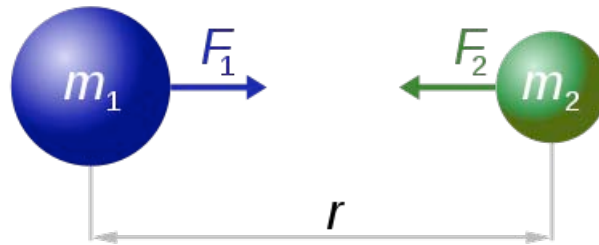

Physics of Life: Fifth Law

The duality of **Fear** vs. *Love* has been transcended at this point and the principles of choice and free *Will* have become irrelevant. The continued **Motion of Evolution** is thus driven forward inevitably by *Pure Action*. In the state of *Silent Watching*, the mind has transcended the state of **Equilibrium** and the principles of duality inherent as *Absolute Laws* of physical manifestation. This state of absolute and perfect **Unification** with the truth of the *Divine Godhead* is no longer adherent to such laws of physical manifestation, only to the pure laws of the *Divine*. This state is the *Unified Field* so sought after by Earth physicists. It is not a mathematical theory as they envision, but an absolute **FACT** of pure existence. In effect, the *Unified Field* cannot be “described” by mathematics, but **IS** mathematics in the purest sense of the idea. A corollary of this *Law* is then that, since **Mathematics** and *Music* are equivalent, the *Unified Field* thus **IS Music**. As such the *Unified Field* is the **Mathematical** description that cannot itself be described. It represents the coherent manifestation of pure vibration that reflects the perfect *Language* that is the embodiment of *Divine Harmony*. The great mistake made by Earth physicists is the continual effort at describing physics by mathematics, when in effect physics **IS Mathematics**. Through the equality of **Mathematics** to *Music* and *Light* to *Sound*, physics is made absolutely equivalent to the perfect *Harmony* of the one pure *Force of Thought*, the origin of all that is, was or ever shall be.

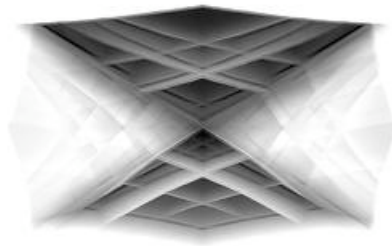

Physics of Life: Fifth Law

Gravity is simply related to all other forces through the principle of mass ($F=ma$) and its relation to pure energy ($E=mc^2$ carried to the nth dimension) through the conversion of the photonic bridge.

$$F_1 = F_2 = G \frac{m_1 \times m_2}{r^2}$$

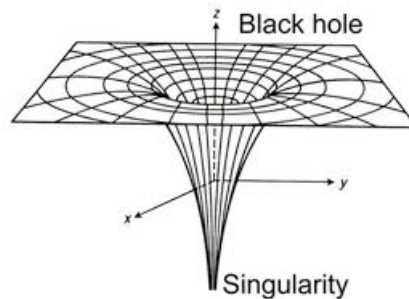

Earth scientists have attempted to unify their two main theories of **General Relativity** and **Quantum Mechanics**. In so doing, the concept of **quantum gravity** was created to map the microstructure of space-time on the Planck scale.

Within these limited models, **Gravity** itself, like electromagnetic radiation, is viewed as quantized. The static gravitational field can thus be expanded to include the concept of *propagated gravitational waves* as well as a particle-form, the **graviton**.

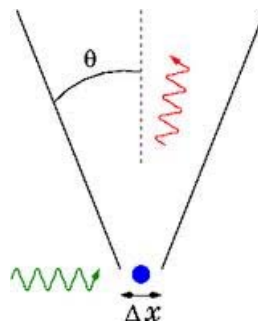

Einstein, in his **Theory of General Relativity**, brought forth the idea of **Gravity** as creating the geometric matrix of space-time through its ability to warp its fabric in the **Form** of gravity wells. A singularity of infinite mass thus has the potential to create an infinite well. The force of **Gravity** here is so strong that not even light itself can escape; hence the application of the term “**Black Hole**” to this phenomenon.

Physics of Life: Fifth Law

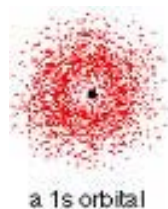

A primary principle of Earth quantum theories is the inability to assign definite values to quantum properties due to the Heisenberg Uncertainty Principle and the *probability distributions* that result from quantum wave mechanical solutions.

$$\Delta x \Delta p \geq \frac{\hbar}{2}$$

Thus, quantum “realities” can only be characterized by probabilities NOT precision.

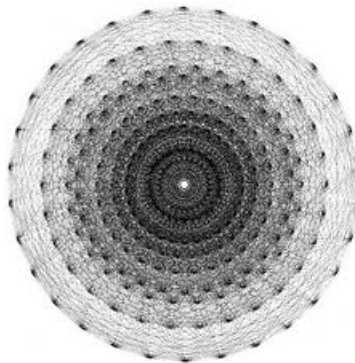

In addition, an added principle of quantum theory is that the observation of “reality” affects the observed “reality.” A given point in space-time can be said to coalesce from the well of infinite possibilities only through the process of being observed. Hence, the “reality” does not exist outside the observation. An even more important key within this concept is the *FACT* that the knowing *Observer* can thus control the manifested “reality.”

Physics of Life: Fifth Law

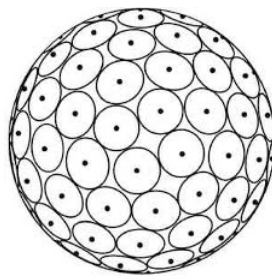

The application of quantum theories to Gravity thus further alters the geometry of space-time into a *matrix of probability*. Space-time is no longer definite, but probable. From exact singularity to nebulous probability, this concept opens physical reality up to the realm of *infinite potentiality* and defines a new *probabilistic geometry* based in vibrational *Mathematics* at its *Musical* core. The Form of space-time thus becomes its Tone.

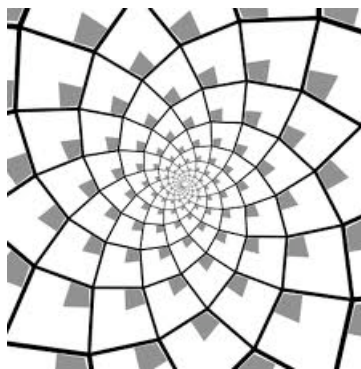

Earth science has limited this *Theory of Quantum Gravity* to the idea, not the application. As the *Path of Evolution* proceeds on this planet, a key advance will occur within the *pineal gland (Gate of Life)* in the human brain. The structure of this gland will transform from conical to spherical allowing direct access of the *glial syncytium* of the human mind to the quantum gravitational *web of potentiality*. With this transmutation will come the Core Knowledge of mind control over gravitational force. Thus, can the geometry of space-time be altered at *Will* and the *Unified Field* made fully accessible.

Physics of Life: Fifth Law

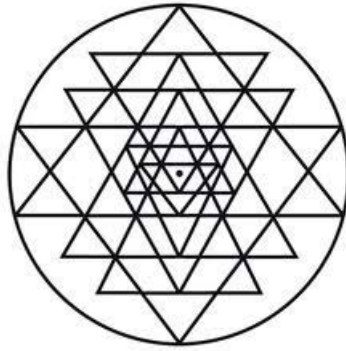

All forces ultimately collapse into One Force, that of *Thought* which is brought into motion in the realm of four dimensional experience through the *Gate of Life* within the human mind, the pineal connection which effects ethereal transduction as described in the following chapter.

The *Unified Field* is thus an etheric transduction of *Pure Music* through the pineal *Gate of Life*. It is the basis of the limited *String Theory* of Earth physics, yet extends far beyond this simplistic model. The *Unified Field* is brought into physical

Physics of Life: Fifth Law

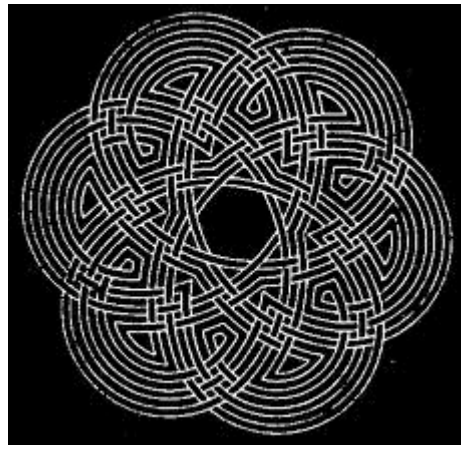

four dimensional manifestation through this soon to be described process of **ethereal transduction** as shall be seen in the next chapter, the Sixth Law...

Physics of Life: Sixth Law

Physics of Life: Sixth Law

Sixth Law: *The Ether is.*

The Newtonian physicists were actually correct in their assumption of the *Ether*, a mythical “substance” that permeated the empty vacuum of space. The *Ether* was the medium that allowed, in their limited theories, propagation of electromagnetic radiation through the vast emptiness of space. The concept of the *Ether* was laid aside at the end of the 19th century when Michaelson and Morley performed their landmark experiment which was erroneously interpreted to disprove the existence of the *Ether*. The experiment was based solely on the speed of the transmission of light through space and demonstrated that the *Ether* as a physical substance was not relevant to light transmission as the speed of light was not altered by the supposed flow of this physical medium. Yet, the *Ether* does exist. It is just that even 21st century Earth physics has

Physics of Life: Sixth Law

been limited to the narrow realm of four dimensional matter evolving in time; thus, its erroneuous conceptualization of the *Ether* was as a four dimensional material

substance. A laughable concept indeed, yet not a surprising one considering the current limitations of the human rational-driven mind. The *Sixth Law* of the *Physics of Life* states the absolute and irrevocable existence of the *Ether* as the

primary matrix of prepotential

that carries the creative power of the *Godhead* forward as the ever-moving *Force of Thought*. The *Ether* is not a *physical* substance, but a congealed vibration of

the *Absolute Truths* emanating from the *Godhead*. As a prepotential, all manifest reality must originate within the bounds of this all-encompassing *Matrix* of undiluted thought. The *pineal gland* in the mind of man acts as the transducer which converts the harmonies emanating from the ethereal vibration of the *Matrix* into the four dimensional theater of creation which is interpreted by the *ego center* of the brain in the cerebral cortex as “reality”.

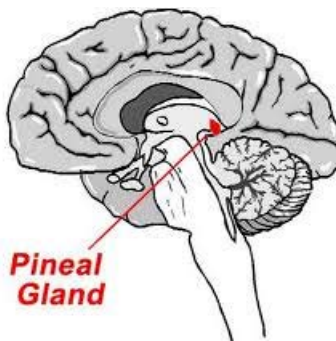

Throughout the many ancient Earth mystical traditions, the pineal gland has been viewed as the Third Eye, the window to the soul, because of its role as a transduction device bringing the higher dimensions into the four of space-time.

Physics of Life: Sixth Law

The mind through the *pineal transducer* and the *prism of ego* splits the single harmonious tone of the **One** into the multi-plex world perceived by the brain as *external physical manifestation*.

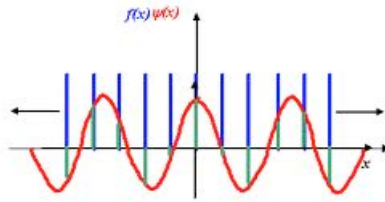

This conversion is effected by specific mathematical equations governing the function of these brain regions. The equations are related to the *Fourier transforms* converting between frequency and time, except these brain functions convert specifically from frequency to three dimensional space and the movement of force that is time.

Physics of Life: Sixth Law

$$G(\omega) = \int_{-\infty}^{\infty} f(t) e^{i\omega t} dt$$

$$F(t) = \frac{1}{2\pi} \int_{-\infty}^{\infty} G(\omega) e^{-i\omega t} d\omega$$

Thus mathematically these equations are unique and separate from the *Fourier* processes, but simply related. The process defined by the mathematics is, of course, simply and completely a *Transform and Transduction* from the dimensional-less *Matrix*

of pure *Prepotential* into a four dimensional array. This array is a holographic

projection of the perceived image reconstructed by the brain from the frequency patterns brought in from the ethereal *matrix* through the pineal gland. *Holography* is the process of image projection via an interference pattern created between two coherent light beams, one scattered by the object then diffracted, the other a pure reference beam. The created image is defined as a *virtual image field* of the true image. The object is

referred to as the conjugate image. Yet, each is but a reflection of a

reflection. The holographic recreation is simply the virtual image of a false

mathematical image created by the brain from its limited interpretations of the transduced frequency signals entering the ego center via the pineal gland gate. The holographic image as perceived by the ego center of the brain as physical reality is

therefore nothing more than a *hologram of a hologram*. Where is the

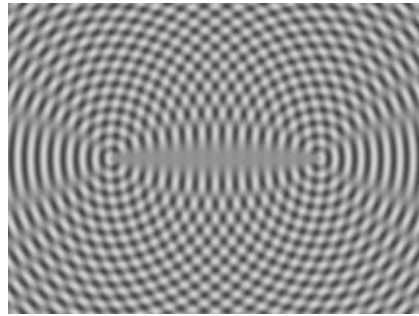

reality in this then? True reality lies far beyond the level of the ego center of the mind.

Physics of Life: Sixth Law

True reality is the pre-stage of the always present overlying *matrix* of the *Ether*. This

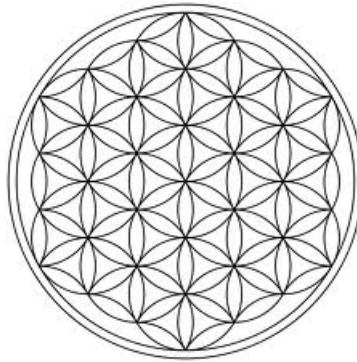

primary matrix is the point of undisputed absolute *Truth*. *All else is*

colored by the diffraction and interference patterns which result from passage through the windows of transduction, dispersion, diffraction and reconstruction.

A natural consequence of *Life* manifest in the physical four dimensional realm is thus the separation of ego from the *ethereal matrix* of absolute *Truth*. All information coming into and out of the ego region of the brain is *holographic reconstruction* and thus tainted by loss of purity in its conversion from absolute *Form*. Yet, the ego center serves its function. It is only through this ego center of the mind that the experience of *life* in the four dimensional planar field can be effected. The ego center thus serves as the interface between the *matrix* of *Prepotential* and the theater of the four dimensional physical universe.

Physics of Life: Sixth Law

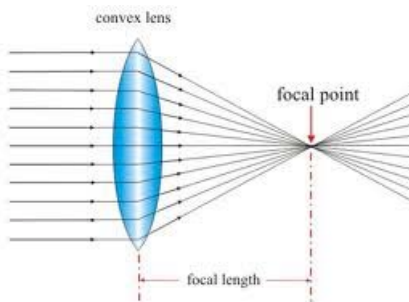

The **pineal gland** acts one level above the ego center as a pure transducer of n-dimensions into four dimensions. It is for this reason that metaphysical traditions throughout earth history have considered the **pineal gland** as a window to the soul.

Absolute *Truth* can only be perceived at the pineal level and never at the ego level.

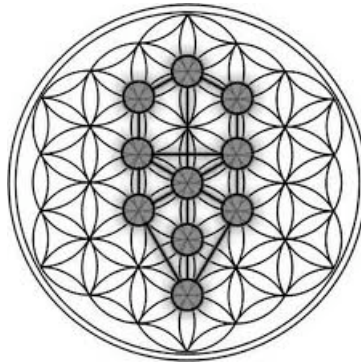

Once the mind relearns the simple *bridge* of connection between these two important centers of the brain, the **pineal gland** can serve to retune the ego center, raising its vibration by an octave turn so that it becomes a lens not a prism, focusing rather than dispersing.

At this point, the entire function of the brain is altered to a higher state. A new *Pathway* is created connecting **pineal gland** to ego through direct **photonic**

Physics of Life: Sixth Law

vibration. Pineal remains a transducer of the *Force of Thought* into a pure *photonic beam* which is then focused through the lens of ego into a direct imaging system rather than a holographic one that is controlled completely by the *Will* of the higher *Mind*.

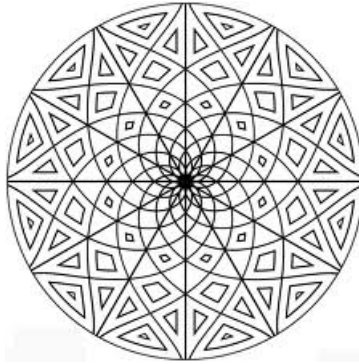

At this point higher *Mind* is linked directly to *Absolute Universal Truth* and can only function for the higher good. Physical reality thus becomes the direct manifestation of the *Force of Thought* under control of *Will* of *Mind*. It then exists as the pure absolute image of creation as contained within the true *Essence* of the *Godhead*. From *Ether* to *Essence* as the one and only direction of the true *Force of Thought* made manifest.

Physics of Life: Seventh Law

Physics of Life: Seventh Law

The *Seventh Law* is simply and explicitly stated in two parts as follows:

1. *Thought is equivalent to Motion and is the only true form of Motion.*

2. *Movement is defined as Thought Transference.*

As such, all physics, or *Physica* expressed as the original word taken from your base language of Latin, is defined as the study of **Motion**; hence, the study of **Thought** and all

Forces inherent therein. The *Physics of Life* (*Physica Naturalis*) thus defines a

Physics of Life: Seventh Law

discipline whose devotion is utterly to the study of *Thought* and its inherent *Forces* as

these principles relate to *Life*. Of course, this discipline then defines the whole of *Physica* or *Natural Science*, as there is nothing outside of *Life*. The great mistake of current Earth scientists and philosophers is to draw a separation or distinction where there is out of necessity none.

The physical universe is simply a manifestation of *Life*, created through the *Motion* of *Thought*, the one pure *Motion*, nothing more, nothing less.

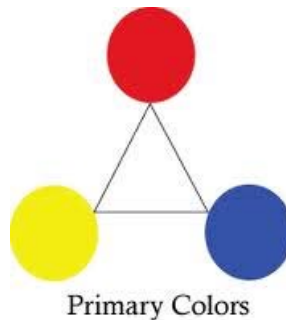

The ancient derivation of *Physica Naturalis* from the original tone which descended as the *star harmony* of Three from the *Godhead* represents the primary field of *Natural Science* whose central quest is the study of the forces of nature. Its laws are carried in the music of the spheres that defined the mathematics for its existence through the transducers of the created mind of humanity. Woven into a 12 folded spiral strands that comprise the true structure of DNA are the 12 Laws that define the way of all *Life* on this planet and beyond. 3 squared equals 9 ($3^2=9$), the *base number*, $3+9=12$ the number of the DNA strands.

Physics of Life: Seventh Law

Then in a circle of completion, the mathematics return to $1+2$ of the 12 equals 3. Recall, 2 becomes 3 becomes 1; the 3 *primary numbers* from which all else can be derived. Coded within the primary colors for all visible light (blue, red, yellow), each color equivalent to a note on the musical scale: F, C, G, are thus the primary notes of all of *Nature* from which the entire musical scale of the stars can be transduced.

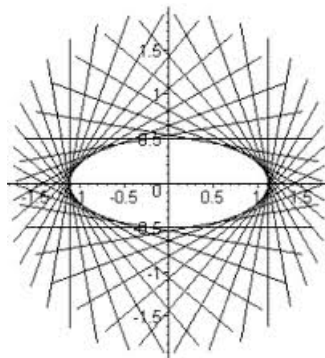

Then we have the three primary colors of visible light which when squared give rise to the 9 base colors which mark the essence of all light, hence all sound. From the equivalence of

Light=Sound, 9 is summed to 3 to give 12. Thus is the *Map* home coded as

Mathematical Music within the strand of 12 for all to carry. From *12 to 3 to 9*, the

Formula was placed long before current earth time for future generations to know.

Physics of Life: Seventh Law

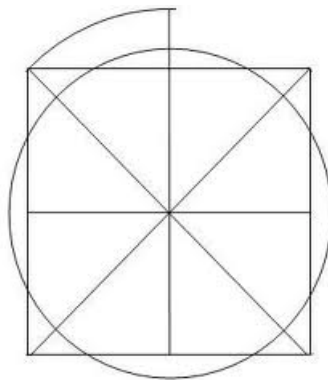

The *Motion* required to free the coded sequences requires the definition of an entirely new field of movement called *photonic kinesis*. The remembrance of the *key* which unlocks this field requires the recreation of an entirely new form of *Thought*, a whole new way of *Being* for which these 12 laws give the steps. Thus, is a circle within a circle defined.

The 12 laws carry the *key* to the *Motion*, the *Motion* frees the *key* of the 12. Not a puzzle really, but simply an anagram requiring restructuring of *Thought* into its equivalent *Motion*, then the process becomes instantaneous as it operates *beyond the boundaries of time* as time is defined in the limited 4 dimensional holographic creation of the physical universe through the transference of movement. That was then the original function of *Physica*

Naturalis as it encompassed all science from time before time to time after time ends

which is simply the *key* from the 12 to the 12 back to 3 from the ninth base of the square (the true meaning of squaring the circle). The truth actually resides in circling the square.

Physics, as it is currently defined, has unfortunately come to be limited within the narrow perception of earth scientists as the qualification (description) and quantification (measurement) of the falsely perceived “physical universe” as holographically created by the ego-based reasoning centers of the brain. Hence, it has become a pseudoscience with the impossible-to-

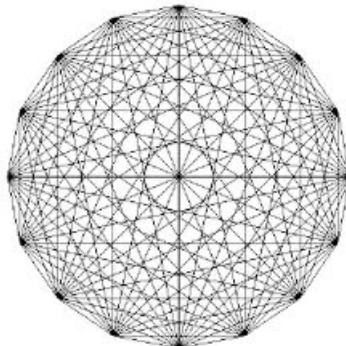

Physics of Life: Seventh Law

attain goal of qualifying and quantifying that which does not even exist. The sub-field of mechanics inadequately pursues the mathematical description of motion and forces resulting in motion with kinematics representing the study of pure, isolated motion. Even the terms assigned to the systems of study are archaic and laughable, for example, “mechanics” implying “of machines”, a false study of falsely conceived principles. In the primitive descriptions of physical law, force is defined as an act that brings about motion and, of course, the concept of motion is limited to displacement in 3-dimensional space. Force through the Newtonian equation of $F=ma$ thus becomes a source of physical power that acts against an object of matter to cause motion. Energy (as work) becomes force exerted over distance ($w=f \cdot d$) and power is energy applied over time. How puny and limited are the concepts and language of current earth physics. The field remains totally constrained with the confines of 4-dimensional space-time construct.

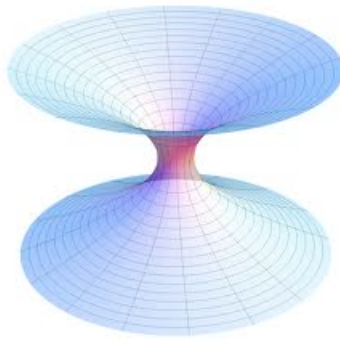

Yet, *Thought* is the one and only form of *Motion*. Thus, the *Force of Thought* is that which acts to create *Motion*. The *Force of Thought* is thus the *Silent*

Intent that acts as the creator of all *Motion*. This then is the matrix that forms the base of the science of *kinesis*. *Kinematics* is *Motion*, not its study, which in proper terminology by limited earth language is *kinesis*. Yet, *kinesis* also defines the art of *Motion* and *Life* reflects art.

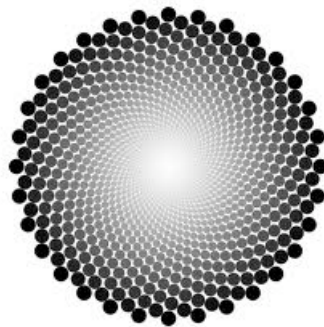

Physics of Life: Seventh Law

There is a distinction important and absolute between *Motion* and movement which must here be clarified for all to see and know. *Motion* is *Thought*. Movement is the process of *thought transference*. Intent yields via its action *Motion* which is *Thought*. Movement transfers thought. In limited earth language, the word “transference” means the act of bearing across or passing through as related to an opening or more specifically a portal. To be mathematically exact, the specific portal of which is spoken is given the name *Nexa Temporalis*, the nexus of time and no time.

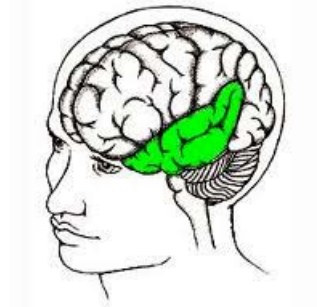

It is the vortex which connects your holographic projection of space-time to the primary matrix which exists completely outside of time. Hence, *Nexa Temporalis* may be called the opening which marks the end of time. By certain groups on Earth this portal is given the name of the end time, erroneously though, as this latter nomenclature implies the *Nexa* as a “time” when there is in reality no time.

Thus, *Movement of Thought* is the process of carrying *Thought* across this portal and as such is defined as *primary temporal telekinesis*. *Motion* is simply *Thought* and does not require movement, nor does movement require *Motion*. Both are *Music*. As such, both require absolute *Stillness* and complete *Silence*. They exist separate and distinct with specific purpose which will be outlined below. The process of

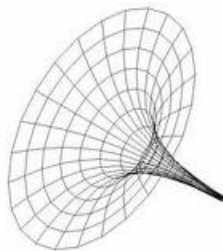

Physics of Life: Seventh Law

movement acts as a mechanism to open and close the portal *Nexa Temporalis* at will. The *kinetic beings* which are the seed of the original *harmonies* inherent on Earth act as *Keepers of the Portal* for they carry the memory that will one day teach all of humanity the secret of its control.

True movement is purely *mind-based*, not physical, and occurs within the regions of the *temporal lobes* of the human brain. These *temporal* centers are so named because they act as the generators of time sense in the spatial-temporal universe. In addition, the *temporal lobes* act as the centers of *kinethesis*, (perception of movement).

Movement of *Thought* is thus created within the *temporal lobes*. Interestingly, but not surprisingly, the *temporal lobes* are the brain centers for *music, language and mathematics*. In the sense of their time function, the *temporal lobes* act as *Keepers of the Portal* Nexa Temporalis.

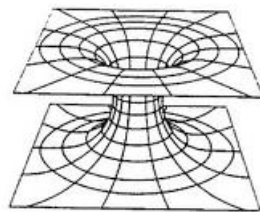

Physics of Life: Seventh Law

Hence, they contain the vibrational essences of the *kinetic beings* within their neuro-glial networks. Certain **star seeds** carry the *key* to unlocking these essences contained within the forgotten recesses of the *temporal lobes*.

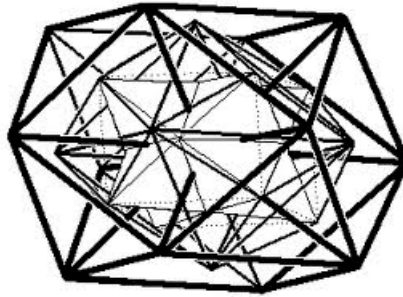

Hence, these beings act as *Keepers of the Keepers*, the **Kar-dul** which are the *temporal-kinesic guardians of yesterday and tomorrow*. Movement carries *Motion* across the portal so that human thought is once again linked with *Divine Thought* in absolute perfect musical alignment through the mathematics of *Thought Conversion* as it passes through the portal of Nexa Temporalis.

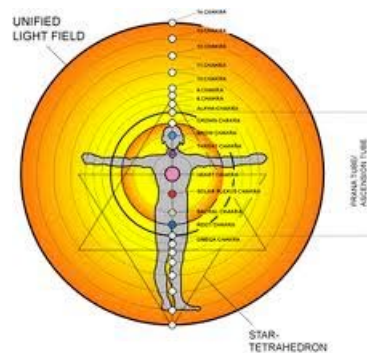

Force of Thought is thus aligned with *Divine Force*, mind intent with *Divine Intent*, and the *Unified Field* is opened.

Physics of Life: Seventh Law

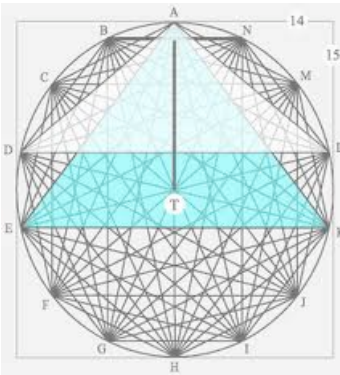

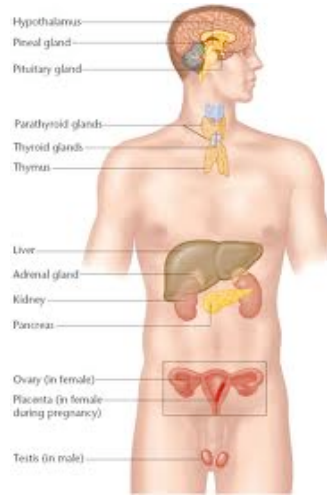

This process is initiated within a triangle of three drawn by sacred geometry through the physical manifestation of the human brain to body and back.

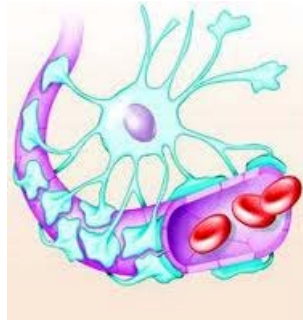

The physical manifestation is simply a reflection of the *sacred geometry* carried in the holographic projection created through the ego-pineal connections. This is the one triangle: adrenal-adrenal-pineal defines ego-pineal in the equilateral triangle created by lines drawn from the adrenal glands which rest on the poles of each kidney to the pineal gland in the postero-central section of the physical brain.

A line drawn between the mid-point of the base of this triangle to its apex (the pineal gland) thus defines the *adrenal-pineal axis*.

Physics of Life: Seventh Law

This blood-brain barrier is actually not a barrier at all but a **dynamic physical link** between the reasoning brain (ego center) and the intuitive brain (the supra-rational).

The correct terminology for the blood-brain “barrier” is *Bridge of Life*.

As the **corpus callosum** unites the two cerebral hemispheres in static fashion so does the *Bridge of Life* dynamically link rational mind to supra-rational mind.

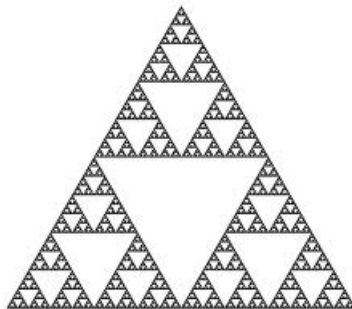

Physics of Life: Seventh Law

The relationship between mind and blood will be discussed fully in the next chapter as it links us mathematically back to our original *seed states*. Recall the pineal gland as the *Gate of Life* is the transducer of the ethereal harmonies into *photonic vibrations* accessible to the ego center of the pineal-adrenal pyramidal projector.

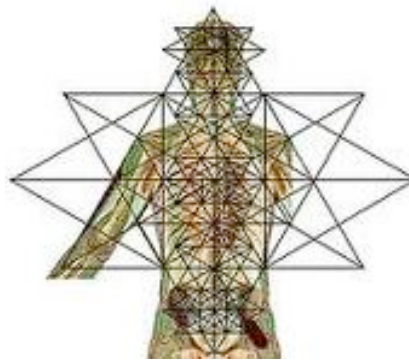

Yet, look further, for there is a *triangle within a triangle*. The smaller inner equilateral triangle is formed by a line drawn from the center of each temporal lobe (which extend on each side just above the ear to the temples of the forehead) to the pineal gland.

Once again a line drawn from the midpoint of the base of this second triangle to its apex the pineal gland represents the *temporal-pineal axis*. This latter axis connects the mind

Physics of Life: Seventh Law

to the vibrations emanating through the pineal transducer. These threads of connection are the vehicles for movement initiation. Their musical harmonies provide the key to the opening, the melody which resonates with **Nexa Temporalis** in perfect mathematical alignment thus effecting its opening and subsequent temporal telekinetic passage of **Thought** to the other side. This then is the true basis for the pitiful attempts of Earth physicists at description of the **Unified Field** via string theory. Look instead to the geometry of *triangle within triangle* as defined by the mathematical interpretation of their angles and area.

These calculations return to the 3 squared to 9 summed to 12. All **Force**, all **Light**, all **Sound** are contained within this simple formula which marks the definition of **Motion** and **movement** as two distinct yet related entities.

$$3^2 + 3 = 12 = 1+2 = 3$$

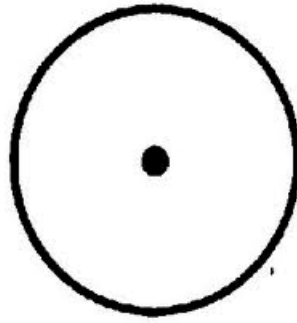

Thought (hence **Motion**) originates from **Mind Intent** which has its base in **Mind** (music manifest). **Silence** is the catalyst. Movement originates from **temporal-kinetic intent** which has its base in **Seed of Mind (Music)**. **Stillness** is the catalyst.

Silence breeds *Stillness* and *Stillness* is necessary for Silence. Herein is found the essence of all *Music*, hence of all *Motion* and *movement*.

In summary, *Physics*, at its root, is thus simply the study of *Thought* and *movement*, hence of *Mind* and *Seed of Mind*. Interestingly, current earth perception of the field of *Psychology* is that it represents the study of the *Mind*. Yet, mind as so defined by earth psychologists is done so in a very limited inadequate sense that does not even remotely approximate the true definition of *Mind*. In truth, *Psychology* is the study of the *Soul*. The two (*Physics* and *Psychology*) are linked, but not equivalent. *Thought* is *Motion*. *Force of Thought* is the Silent Intent which acts to create *Motion*. The *Soul* is the silent pool that lies placidly beneath *Motion* and *movement* at all times; the hidden matrix, that which represents the *Silent Watcher*. For in reality, nothing ever changes, nothing ever moves.

Physics of Life: Seventh Law

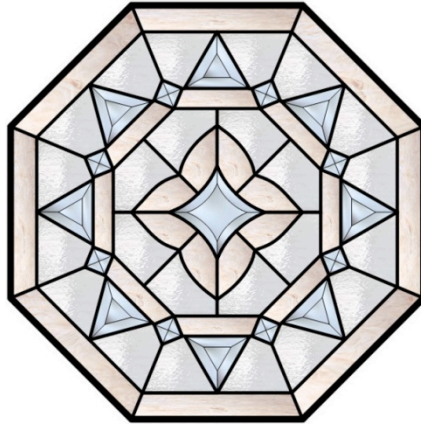

There is no action or reaction. There only IS. The *Soul* knows this and watches the game of *Life* as it plays out upon the planet Earth for the pure and simple joy of experience. *Soul* by its complete **Stillness** and absolute *Silence* brings **Mind Intent** in perfect alignment with *Divine Intent*. Thus, are the patterns of *Thought* calibrated so that *Force of Thought* becomes *Divine Force* and *Motion* upon transference by *movement* is instantaneously and completely recognized as **G O D**.

Physics of Life: 8th Law

Physics of Life 8th Law

The 8th Law is two-fold:

(1). Light and energy are not equivalent, but they are linked.

(2). Consciousness is based in heart not mind and is Light-activated.

There must be clear understanding of the distinction between *Light* and *energy*.

Hence the need for a new, precise language of *Natural Science*. Earth

physics has erroneously considered *Light* as a subset of *energy*, typically applying the term “light” to the range of the electromagnetic spectrum between ultraviolet and infrared with the narrow visible spectrum (400-700nm) contained in between these two realms. Electromagnetic energy has been viewed as a propagating wave of electrical and magnetic fields oscillating in tandem and propagated through space-time. **Quantum mechanics** introduced the concept of the light wave

Physics of Life: 8th Law

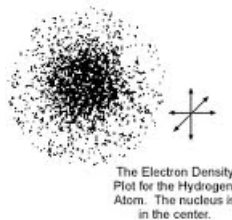

collapsing into a particle of energy, the **quantum** or *photon*, given by Planck's equation:

$$E = h\nu$$

Where E is energy in the form of propagated electromagnetic radiation, ν is the frequency of the wave of electromagnetic radiation and h is Planck's constant (6.62608×10^{-34} J·s). The corollary to Planck's theory of the particle-nature of light came with deBroglie's equation bestowing wave-nature on particles of matter:

$$\lambda = h/p$$

where moving particles of matter are assigned a wavelength λ inversely related to the momentum of the particle ($p=mv$; m =mass, v =velocity) through Planck's constant h. The application of Schrodinger's wave equation ($\hat{H}\Psi = E\Psi$) to the electron of the hydrogen atom led to the current limited quantum model of atomic electron configurations.

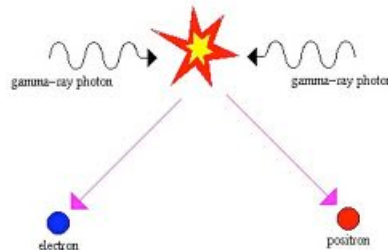

The solution to these wave equations have only been attained for the simplest of atoms, hydrogen. The mathematical complexity of the more complex elements from helium and above on the Periodic Table are beyond the current scope of computational ability on earth.

Physics of Life: 8th Law

A standard periodic table of elements, color-coded by groups. It includes the main groups, transition metals, and the lanthanide and actinide series at the bottom.

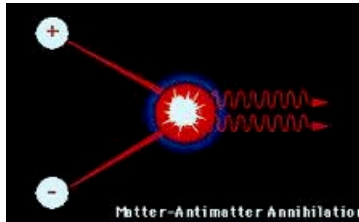

Note that the atom remains the **basic unit of matter** according to earth chemistry at its present state of knowledge. Although physicists have been able to split the atom into a myriad of complicated sub-atomic particles, the atom remains the smallest unit capable of maintaining the basic elemental material form. This observation is due to the basic principle of reflection in the manifestation of material units from *Light* through the equation: $\nabla \Omega = \Xi$. This principle of reflection has been misunderstood by earth physicists through the concept of antimatter. The mathematical equations of **Quantum Theory** predict for every manifest particle, the existence of an anti-particle of equal mass and opposite electromagnetic sign. Two photons collide to produce a particle and anti-particle.

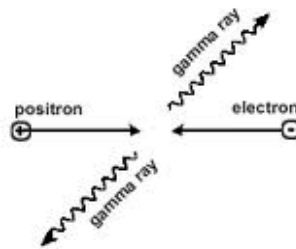

The manifestation of the electron would thus result in the simultaneous manifestation of its anti-particle the positron (“positive electron”). Anti-particles were later shown to exist within the space-time construct. Yet, the paradox was that there “appeared” to be far more matter in the universe than anti-matter. Where did all the anti-particles go? Earth physics has shown that the collision of two anti-particles would result in the process of annihilation in which the matter was

converted into pure energy via Einstein’s equation : $E = mc^2$.

Physics of Life: 8th Law

When brought into close physical proximity, a particle and its anti-particle attract one another due to their opposite electrical charges through the electromagnetic force then annihilate each other.

So, the big mystery of earth physics is “why did all the particles of matter not self-annihilate with their anti-particle twin?” The universe of the four dimensional space-time construct has been observed to contain residues of antimatter, but in far less quantity than can be explained by the current models.

In the exact language of pure *Natural Science*, there are no paradoxes.

The appearance of a paradox results solely from the inadequacy of the theory. In

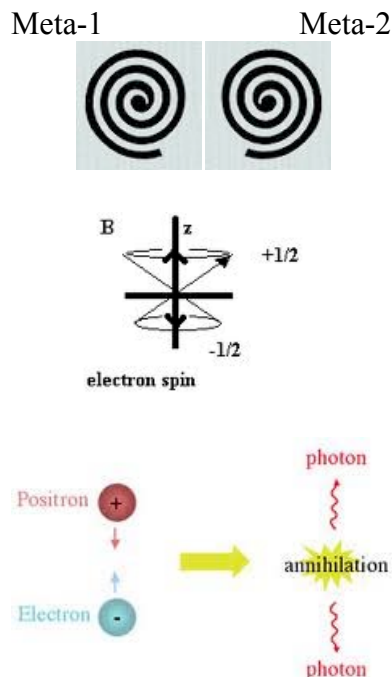

Genesis, the wave-particle paradox was shown to result from the fact that a

photon is neither a wave nor a particle, rather it lies beyond both descriptions. The limitations of the current **Quantum** model result in paradox. *Nature in its true essence contains no paradoxes.* Thus, antimatter is a limited construct resulting from the inadequate model of current earth particle physics. Recall from the

sections in *Genesis* on the origin of matter that the **Word** was made manifest

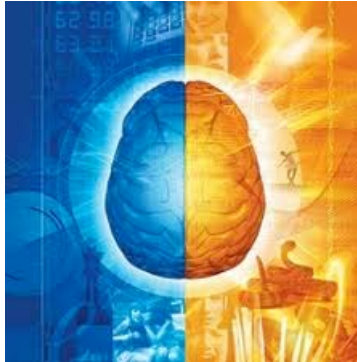

Physics of Life: 8th Law

as the geometric patterns of *Music* enfolded the vibrational patterns of *Light* into the form of the photon, the primary particulate manifestation of *Light*. The weaving of geometric form with vibration was created through the *photonic bridge* as resonant *Force*. Through the principle of *Reflection of Light* into matter, did the perceived duality of opposites arise.

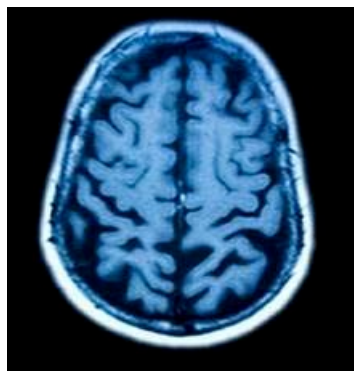

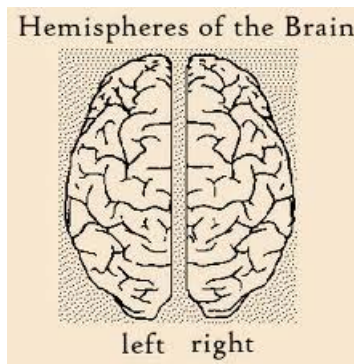

Within the concept of electron as particulate manifestation, the designation of “particle” and “antiparticle” is superfluous. **There are no particles; hence, there are no antiparticles.** The one is an integral part of the other, *As Above, So Below*. It is perception which results in the perceived opposites. There was a distant point in Earth history that resulted in a cross-road for humanity, a nexus or turning point. At this point in earth-time, the human brain was altered which resulted in a complete transformation of the methods of perception.

Physics of Life: 8th Law

The unified cortex split into the two hemispheres with limited bridges of connection between them.

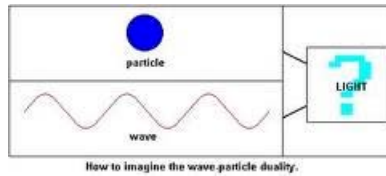

Humans' ability to "see" matter in its true manifestation was lost in this internal disconnection. Thus, did matter assume a different form within the human mind.

The material brain became a *binding force*, limiting perception to what was

Physics of Life: 8th Law

coded in physicality. Pure, *unbound thought* became bound and the world of *paradox* was born.

It is this process of absolute *Light* reflection into matter which defined the elemental basis of the contemporary two-dimensional Periodic Table.

Expansion of the Periodic Table into 3-dimensions via *tachyonic* technology allows for perception of the link between matter and time, which is the seed expression of the *graviton*.

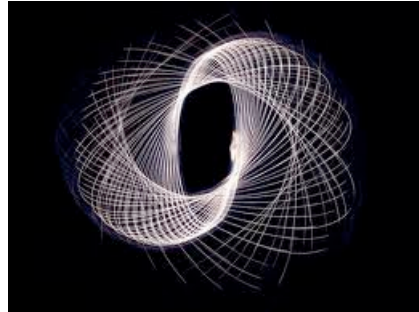

Such technology has not yet been developed on Earth, but its potential can lead to expansion into supra-luminal velocities not constrained by the currently perceived

Physics of Life: 8th Law

limitation of the “speed” of light as absolute formulated by Einstein in his

Theory of Relativity.

Planck’s Quantum Theory and Einstein’s relativity formed the framework for 20th century Earth physics yet remain sadly lacking in their ability to accurately describe reality. First and foremost, has been the misunderstanding regarding the true nature of *Light*. The speed of light has been taken as a universal constant ($c =$

3×10^8 m/s) since Einstein published his *Theory of Relativity* in the

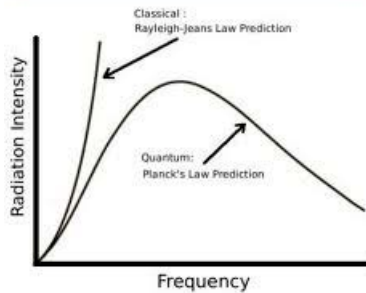

early 1900’s. Yet, *Light* at its core Nature has no motion thus the application of a velocity term to *Light* is irrelevant. The concept of motion requires movement over distance relative to time (velocity = distance/time). The fact that both space and time are non-existent at the core of Reality renders this concept meaningless.

Einstein understandably misinterpreted the lack of *Light* motion as a constant velocity, c within his relativistic framework. Planck also misconstrued the property of *Light* in his adoption of the quantum concept.

$$B_{\lambda}(T) = \frac{2hc^2}{\lambda^5} \frac{1}{e^{\frac{hc}{\lambda kT}} - 1}$$

Physics of Life: 8th Law

Blackbody Radiation vs Frequency

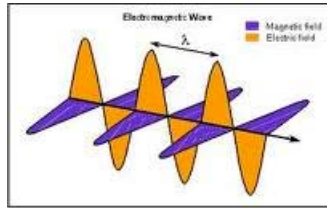

Energy, in the sense of electromagnetic radiation is indeed quantized by his equation $E=h\nu$ within the current reality construct. However, this current construct has definite and critical limitations. First and foremost, is the limitation imposed by the *imprecise language* of scientific description inherent in the current models. A clear terminology must now be adopted.

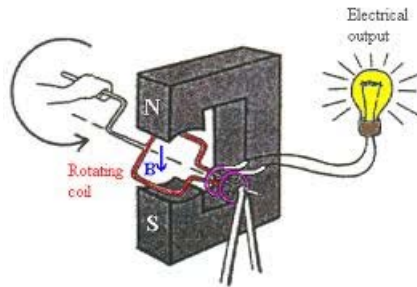

First, the term “c” which is improperly given the term “speed” of light in current Earth physics should be re-labeled as the constant of *Light* reflection. It represents a *matrix propagation constant* within the reflected frame of four-dimensional space-time. Second, the term “energy” as given in Planck’s equation, $E=h\nu$ must be more precisely defined. Energy as represented by the term “E” in Planck’s equation refers to *propagated electromagnetic radiation*. The term **“Electromagnetic Radiation” (EMR)** should be limited to the description of all propagated energy forms within the narrow limitation of four-dimensional space-time. **EMR** is generated within the four-dimensional space-time construct via an alternating electric or magnetic field.

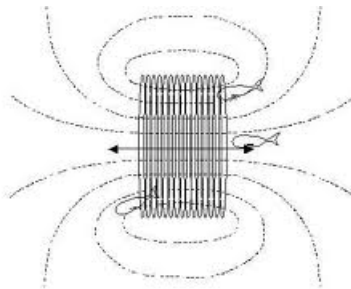

Physics of Life: 8th Law

An example is the generation of electrical current by moving a magnet inside a coil of wire (generator).

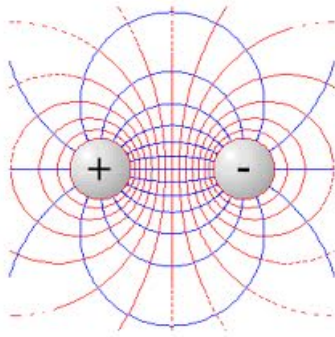

Alternatively, the passage of a current of electricity through a coil of wire generates a magnetic field (solenoid).

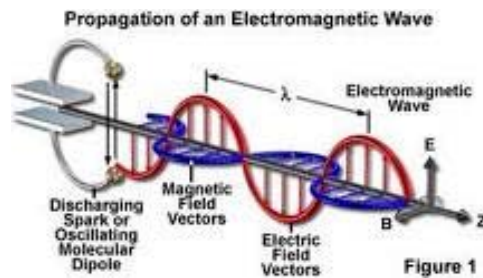

Electricity and magnetism are irrevocably linked in the current Earth physics.

Electric charges and magnetic poles can influence and communicate with each other over distance. Hence, the term **electromagnetic field (EMF)** is used to describe an area of space whereby a source (electric charge, magnet or electric current) can exert influence.

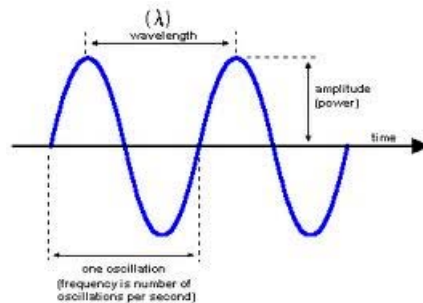

Physics of Life: 8th Law

A propagating wave of electromagnetic radiation (**EMR**) is generated by a changing electromagnetic field (**EMF**).

A wave of **EMR** is characterized by a frequency of vibration (ν), a wavelength (λ), and a vector direction of propagation in space-time (\vec{k}).

Frequency and wavelength are inversely related through the *light* reflection constant ("speed" of light): $v = c/\lambda$. Note that the human eye is capable of detecting a small range of the **EMR** spectrum between wavelengths of 400-700 nm (nm = nanometers; 1 nm = 10^{-9} meters; i.e. 1 nm = 1 billionth of a meter). The term visible **EMR** should be applied to this range (not "light"). **Electrodynamics** is the study of electromagnetic fields, the propagation and interaction of various forms of **EMR** and the interaction of **EMF** and **EMR** with matter within 4-

Physics of Life: 8th Law

dimensional space-time. Note that matter can be viewed through Einstein's equation $E=mc^2$ as condensed **EMR**.

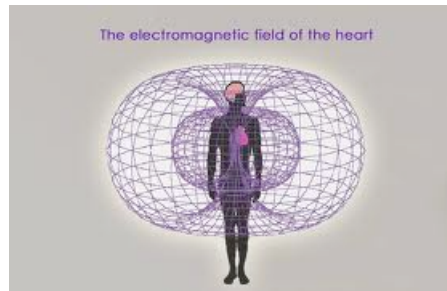

Third, the definition of energy must be expanded beyond the current limited concept of **EMR** and **EMF** which exist solely within the constraints of space-time reality or the even more limited definition within earth physics as the ability to do work or generate heat. *Energy*, in its true form, can be viewed as the Force

that holds *light* as a pure crystalline matrix of creation. *Energy* is thus the web of pure potential on which *light* vibrates the song of creation, like the dew shining on the Spider's web. This Force of limitless potential holds the *light* and permeates all of creation with the *light*. This web of Force recognizes no boundaries and has no limitations in its ability to hold and bring the *light* to all creative manifestation. *light* and *Energy* are thus not equivalent, but are irrevocably linked by the *Laws of Creation*.

Bioelectrodynamics is the study of the **EMF** and **EMR** generated by or acting upon the living organism. The **HEART** is the largest generator of **EMF** in the human body and interacts with the lesser generator the *brain* through pulsed wave motion of blood flowing through the body and cerebrospinal fluid flowing along the spine and through the ventricular system of the brain.

Physics of Life: 8th Law

The Chakra system of ancient India was based on **EMF** field concentrations along the spinal column. Seven chakras were described in the ancient Indian system.

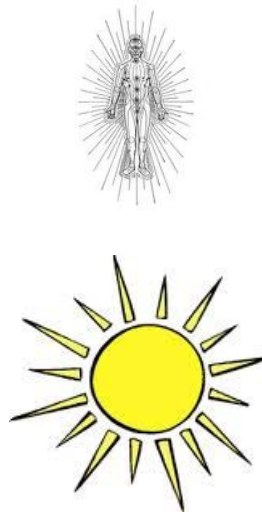

The first or root Chakra at the base of the spine links the human organism *electrodynamically* with the **EMF** of the Earth. The 7th Chakra at the crown of the head is the bridge to the multidimensional etheric regions beyond 4-dimensional space-time. The heart chakra (4th chakra) resides in the center connecting the lower (Earth) chakras to the higher (etheric) chakras.

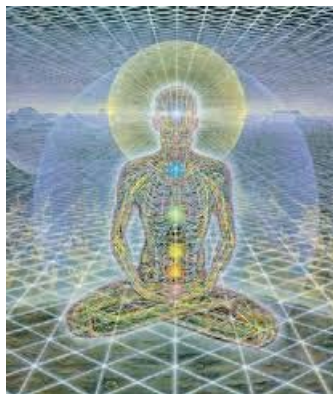

Physical healing and spiritual awareness can be manipulated using the *electrodynamic sciences*, such as Yoga, qi gong or the various “energy” healing systems. These sciences link the heart and mind centers *electrodynamically* in order to influence the *electromagnetic matrix* of the

Physics of Life: 8th Law

body. The physical body is generated through condensation of the **electromagnetic matrix**, thus physical physiology can be affected through **electrodynamic manipulation**. This fact is the basis of all these so-called “energy” healing technologies. Yet, this perception is sorely limited.

Influence from our current solar star configuration has served to dampen human awareness to the restricted level of electrodynamics. Human consciousness is thus attuned to **electromagnetic phenomena** and thus currently incapable of perceiving pure **light phenomena**. The dampening field created by the solar influence has led to a primary de-coupling between gravity and electrodynamics. Thus, consciousness has been down-regulated to a purely electrodynamic realm.

Physics of Life: 8th Law

The Ark of the ancients was the electromagnetic/graviton bridge that linked human consciousness back to the *Star-grid matrix*. Thus did Enoch

communicate regarding the *Ain Soph Light*, the “Arc of Light” which enters the human consciousness field through the third eye (not the physical eye) and controls all the basic neuronal activity of the pineal gland and its myriad of connections.

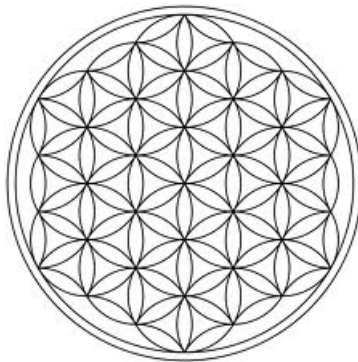

The primary function of the physical brain is as a primary *Light* generator on a molecular level. Thus, is the brain as its most basic level, a *Light* computer. However, the primary function of the brain has been forgotten and Earth science has postulated purely electrodynamic and chemical modes of neural function. The Light patterns are programmed into the neural tissues of the human cortex through the *Ain Soph Arc*. Note that in ancient times past, the sun was

intentionally manipulated and its *Light*-generation patterns changed resulting in the current pattern of sunlight that acts as a memory barrier or “damper” designed to make humans forget their true essence while participating in the four-dimensional theater of Earth life.

Physics of Life: 8th Law

The **Mínd** is currently limited to **duration**. However, in so far as it is communicating through non-physical thresholds, it is limited only by **sequence** in thought-forms. This means with the proper thought-forms there is no limitation to tele-thought communication provided sender and receiver have compatibility. In this process the mind sees the events of cause and effect and begins to transcend these events which make up the mechanistic barrier. A new mode of *Being* is born.

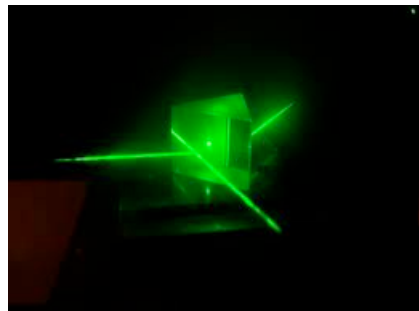

The battle of *Armageddon* plays out purely on the physical plane. It is an evolutionary culmination of the principles of duality: good vs. evil, “light” vs. dark, etc. which all derive from the primary duality of love vs. fear. All the rising death, destruction and chaos on Earth today is the playing out of this ultimate evolution of the physical plane time line that has manifested through individual choices within this created quantum reality humans have chosen to experience. While the human heart tugs at the sadness growing around it, humans must remind themselves that all is playing out as it is meant to be.

Physics of Life: 8th Law

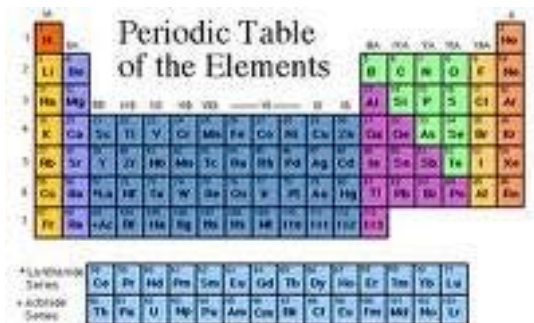

“There is nothing that happens by chance in our universe. Everything unfolds according to higher laws... everything is regulated by divine order in accordance with your individual choices.” -Spirit Walker, 11/96

These higher laws represent the *matrix of creation*, the underlying web that vibrates into being the principles of **Natural Science** which govern all of manifest **Nature**. The Work lies beyond this limited theater of physical manifestation. Yet, it is *Natural Law* which must be accessed and utilized at will to alter the innate vibratory patterns. The portal is opened within the *Unified Field* which is created by joining the 4 physical forces into 1 via the **photonic bridges**. The unification is an illusion as there is no underlying separation. The illusion of separation is created through the pineal prism which splits unity into duality.

Physics of Life: 8th Law

Thus are formed 2 forces from the one *Force of Thought*. These two forces are the **nuclear electromagnetic** and *Gravity*. In the limited perception of modern Earth physics the **nuclear electromagnetic force** is perceived as three separate forces (electromagnetic, strong nuclear and weak nuclear). These three apparent forces create the physical manifestation of the individual atoms which form the base structure of the elements within the 2-dimensional Periodic Table.

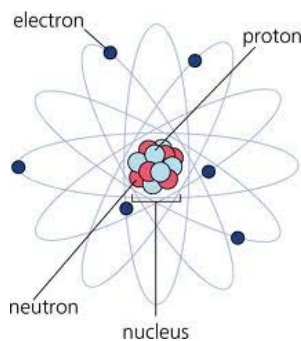

A standard periodic table of elements, color-coded by groups. It includes the main groups, transition metals, and the lanthanide and actinide series at the bottom.

* Lanthanide Series
+ Actinide Series

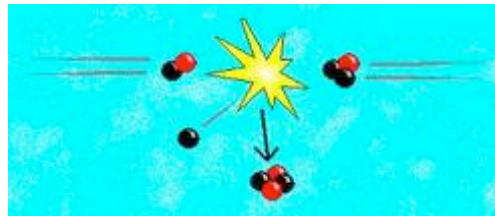

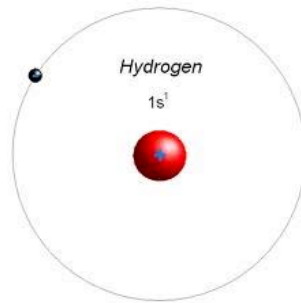

The atomic nucleus is the mass center of the atom.

The nuclear forces thus generate mass through their interaction with gravitational waves. The nuclear component of this trinity as a *mass generator* represents the underlying connection of the nuclear electromagnetic force to *Gravity*. Newtonian physics has the concept backwards: mass does

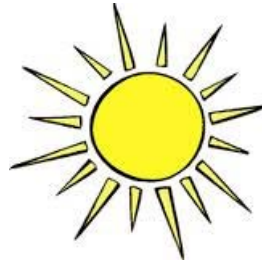

Physics of Life: 8th Law

not create *Gravity*; rather *Gravity* creates mass. *Gravity* provides the seed for *Light* reflection into matter-time. The processes of nuclear fusion which power the sun are created by the action of *gravitational waves* on the base element *hydrogen*.

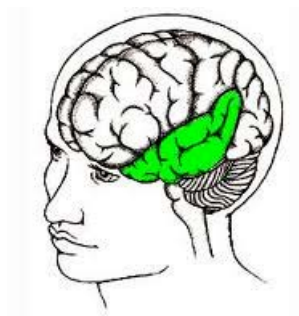

The sun is erroneously thought to be a star but is in reality an **evolutionary force** or *catalyst* placed in Earth's midst by its parent star. This fiery force was designed to guide human evolution in the four-dimensional theater of life created on Earth. Hydrogen fusion generates nuclear energies that include frequencies of *electromagnetic radiation (EMR)* known as *Sun Light*. As the *Keys of Enock* states, this *gravity-generated light form* is designed to act as a damper or memory barrier making humanity forget its true origin during the physical experience on Earth.

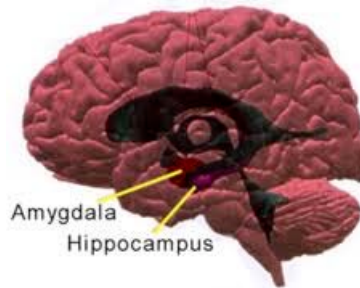

Physics of Life: 8th Law

The frequencies of solar electromagnetic vibration are tuned to the temporal lobe memory centers of the brain located within an area called the **hippocampus**.

There are direct connections between the **hippocampus** and the *amygdala*, another temporal lobe structure which acts as the organ of fear.

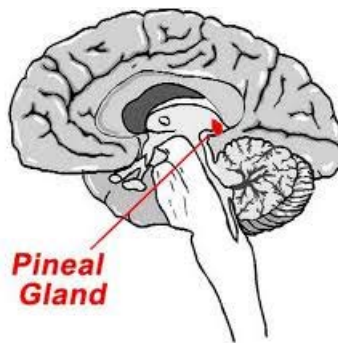

The primary function of the *amygdala* is the generation of the emotion of

fear. It is also of importance to note that both of these areas are contained within the temporal lobe of the brain so-named because it generates the sense of linear time or “duration”. Thus, *the solar effects act to dampen memory and enhance*

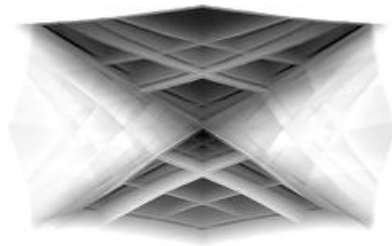

Physics of Life: 8th Law

fear. These frequencies also awaken the areas of the temporal lobe responsible for perception of linear time.

The coming transition is one of consciousness transmutation in which the pineal gland will override the effects of the solar frequency damper to remove the sun-hippocampus-amygdala-temporal lobe sequence of interaction.

The net result will be **the instantaneous and complete removal of the temporo-spatial net from the brain's receptive field.** In other words, **the space-time illusion will be instantaneously and completely removed.**

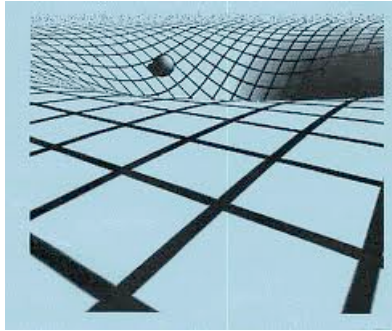

This transition will be effected through *gravitational waves*. As the

theater is created through *Gravity* so shall it be destroyed through

Gravity.

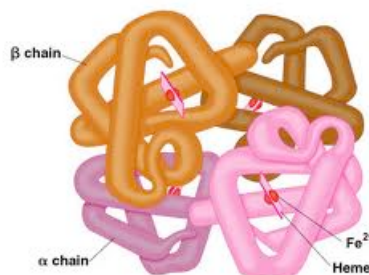

Physics of Life: 8th Law

Within the human body, it is the *blood* of humans that provides the key. The **erythrocytes** (red blood cells) which are formed in the crystalline cave of the bone marrow are specialized cells designed for this transition. During their development these cells lose their nuclei.

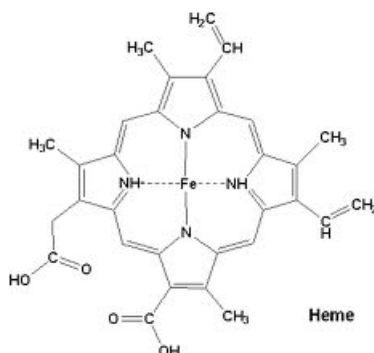

Their *DNA* serves a limited purpose in creation of the **hemoglobin** molecule.

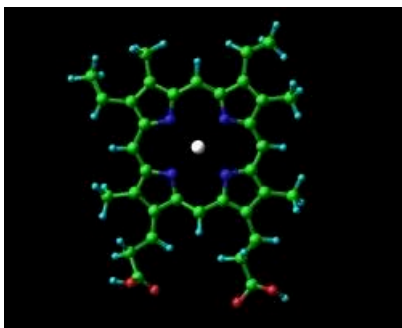

Once the *heme* synthesis is complete, the cell nucleus with its *DNA* are ejected to prevent interference later from the alteration that will occur in human base *DNA* during the coming transition. **Hemoglobin** is a unique molecule

Physics of Life: 8th Law

consisting of 4 protein chains in which each chain surrounds a central *porphyrin ring* structure known as *heme*.

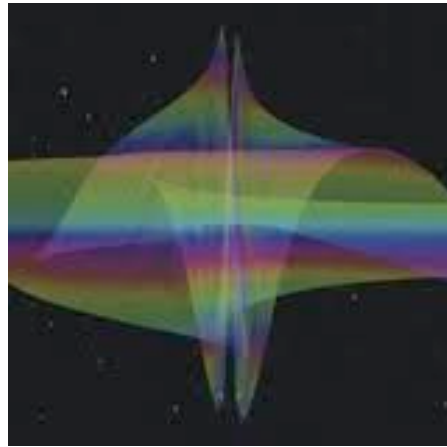

In the ring's center, an *iron* atom (ferrum, Fe) is suspended. Current Earth medical knowledge views the function of this *heme* group in a narrow fashion as acting solely to carry oxygen and carbon dioxide between lungs and tissues of the physical body. The *iron* atom undergoes changes in oxidation state dependent on whether it is bound to oxygen or not. The ferric-ferrous transition also results in a dramatic color change within the *heme* group from bright red to deep blue. All physical plane human metabolic processes are dependent upon this oxidative functioning of the *heme* group.

It in turn is dependent on an exact amino acid sequence structure of its surrounding protein chains. These amino acids are in turn coded by the double stranded

Physics of Life: 8th Law

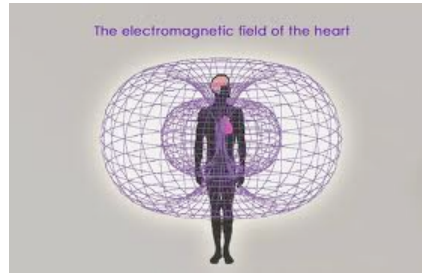

component of our base *DNA*. A change in a single amino acid in a sequence of thousands can result in inability of the hemoglobin molecule to properly function in its physical plane role. Yet, earth medicine remains blinded to the underlying higher function of the hemoglobin complex which is as an *electromagnetic-graviton resonator*.

The *heme* group of hemoglobin with its iron core acts as a **ferro-electromagnet** aligning with the interference pattern created between the magnetic field of the earth and the electromagnetic field created by the human heart and nervous system.

Physics of Life: 8th Law

The protein chains which surround this core provide a link between the electromagnetic wave function of the *heme* group and the **salt resonators**

carried within the ***water of the blood***. The human heart beats within a narrow frequency range centered around 60 cycles per second. The beating heart thus generates its own alternating electromagnetic field. This heart field has specific effects on the iron atomic nucleus that depend on its exact alignment with the aforementioned electromagnetic fields of earth-blood-brain. The key rests in perfectly aligning the brain field with that of the heart. Alterations in the base electromagnetic core of the earth and in the over-riding star patterns will occur concurrently thus creating a special pattern in which brain and heart are in **resonant alignment** with both the Earth's electromagnetic field and *galactic star geometry*.

Physics of Life: 8th Law

The alignment process will bring great movement and change to the Earth itself and to human structure, physiology and psychology.

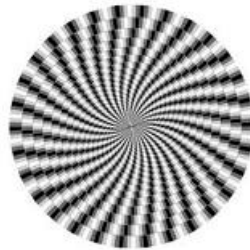

What will be viewed contemporally as disaster, chaos, disease and insanity with fear by many, is in reality a normal process of *evolutionary change*.

Those humans who walk in full awareness (with eyes to see and ears to hear) will recognize these changes for what they are and will move through them without fear. The resulting alignment between brain-heart-earth-star geometry will activate a code programmed within the 12-spiraled *DNA* of humans.

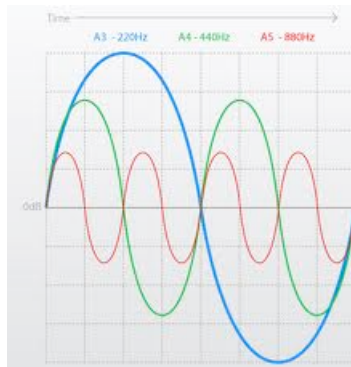

Physics of Life: 8th Law

The *DNA* pattern is then altered in n-dimensional space to a new 20- stranded *spiralic* structure through bonding of new *star-components* to its pre-existing base unit.

The additional *star components* are bonded to the base human *DNA* through the specific *electromagnetic-graviton resonance* pattern created between brain, heart, earth and galactic geometric patterns. Only those humans receptive to the alignment of brain (mind) with heart will gain these extra patterns. The new *DNA* structure will alter both the frequency of the beating heart and the base frequencies of mental processes to a higher level, **“an octave higher for the turn.”**

Physical “symptoms” such as ataxia (gait and balance disturbances), headache, dizziness, chest pain, cardiac arrhythmias, pulmonary dysfunction, gastrointestinal upset, bone and joint discomfort, skin changes, visual and auditory perceptual alterations, along with mental “symptoms” of cognitive dysfunction (primarily short-term memory, concentration and attention deficits), insomnia, hypersomnia, depression, anxiety, dissociation and even hallucinatory experiences may surface in many through these changes.

Physics of Life: 8th Law

The ancient *electrodynamic healing sciences* mentioned above , such as Yoga, qi gong or the various “energy” healing systems can help balance the individual system and lessen the physical and psychological impact of the evolutionary changes in progress.

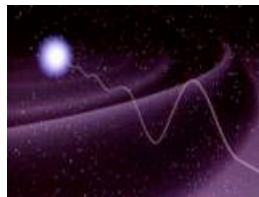

Physics of Life: 8th Law

Spiralic waves formed through the new 20-stranded vibratory pattern will tune the higher frequencies of heart and mind to create a new field of interaction with the iron nucleus of *hemoglobin*.

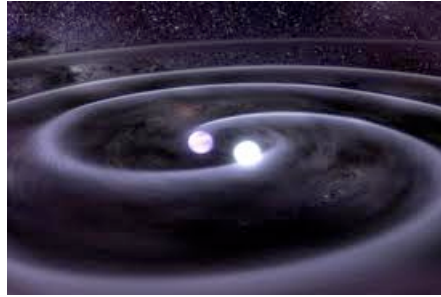

The newly created interaction field will produce fluctuations in the nuclear matter of the **iron atom**. The mass fluctuations tuned to the new frequencies will in turn alter the existing pattern of gravitational wave fronts held within the *heme* ring structure.

These wave fronts will spread outward altering the underlying pattern of the *gravitational web* linking earth to sun. These *graviton* alterations will result in a complete change in solar chemistry and material structure.

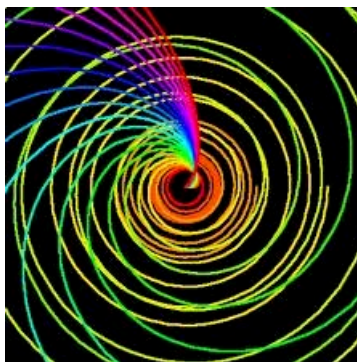

Physics of Life: 8th Law

Hydrogen will be transmuted into its original star elemental form which is *pure mass-less Energy*. This process thus represents a de-fusion of *Hydrogen* as it returns to its true nature.

Earth physicists write of the “Big Bang,” which is their limited view of the origin of the current *Hydrogen*-based “universe” of space-time. *Hydrogen* was the primary element which manifested at this nexus of origin. All other elements in the current material universe were created by star fusion processes using *Hydrogen* as the primordial seed element. This fusion process will be reversed in the sun returning *Hydrogen* to its original form-less state as *Energy*.

Physics of Life: 8th Law

The web pattern of pure potential, bearer of the true *Light*, is thus de-cloaked within the solar system. The solar light emanation then transforms into a

gravity-independent *holographic pattern* resonant with the *Ain Soth* *light* of the pineal arc allowing direct perception of the frequency realm beyond the four-dimensional space-time.

Time sense in the form of *duration* is thus converted into a new form of

perception allowing detection of *pure thought sequencing*. The end

of “time” is effected. Those humans who, by their own choices made on some level whether conscious or not within this physical plane, were not receptive to the mind-heart-earth-star alignment process remain in the state of 12-spiraled *DNA*.

The evolutionary process for these humans then grinds to an absolute and final halt. They remain within the four-dimensional theater of reality and will

play out the drama of *Armageddon* to its natural and final conclusion, the

end of time. Humans who have progressed in their natural star evolution to the 20-stranded state will continue the *Work* at hand, interacting with higher intelligences to continue the process of learning and ascension; thus creating a new form of *Being*.

Physics of Life: 8th Law

This then is the true meaning of the Rapture in the Bible. Through this transition, humans will be re-acquainted with the primary memory that *Consciousness* is based in the human *heart*, not the mind.

All current laws of earth-based physics will be repealed and a new set of laws governing the spiritual ascension of humanity will be brought forth to govern human progression along the natural continuum of consciousness toward a pure state of *Being*. These laws which will define a new *Natural Science of Being* and the methodology for achieving this perfected state of humanity are outlined in the next volume of this series:

Physics of Life: 8th Law
