

**P***oisonous Prescriptions* will make *every* reader think twice before taking another medicinal drug. Dr. Landymore-Lim's theories evolving from her research in the UK, that diabetes and asthma may result from exposure to antibiotics and other drugs, will send shock waves through the medical profession. Many patients who have been exposed to drugs may be walking time-bombs, liable to fall prey to disease at any time

Written for the general public who are avid but *ill-informed* consumers of drugs, readers of *Poisonous Prescriptions* can learn what to look out for and protect their families' health.

***"Your results look most interesting & suggestive."*** Medical Research Council epidemiologist (UK).

***"If amoxicillin can cause diabetes, why not all penicillins?"*** Senior Drug Advisor, Department of Health (UK).

***"There is no doubt that the medical profession accepts that exposure to antibiotics during manufacture can cause asthma."*** Department of Health, Western Australia.
