

EUCALYPTUS

When your box arrives, it is important to get your greenery in water as soon as possible. Remove greenery from box and remove any protective covering used during shipment. Have the clean buckets with fresh clean water ready. Cut the stems 1-2 inches from the bottom of the stems and place in the buckets for hydration. Let them rehydrate for at least 3-4 hours, sometimes it may take up to 12 hours for hydration. Check water levels to ensure there is sufficient water for the thirsty flowers. To prolong the longevity of your greenery re-cut the stems and refresh the water every 3-4 days.

Stems Lengths	50 - 60 cm / 20 - 24 inches
Vase Life	Average vase life with proper care and handling, approximately 10 to 12 days.
