HEALTH CANADA ISSUES LICENCE TO UNIQUE CANNABIS PACKAGING FACILITY

Rogue Processing ready to revolutionize the cannabis industry

Niverville, MB - Health Canada has granted a Standard Processing licence to Rogue Processing allowing them to immediately begin offering their packaging services to cannabis producers. Rogue's packaging procedure is state of the art, environmentally friendly, low-cost, and performed without a need for locked-in contracts. Rogue's hermetically sealed cans are available for cannabis flower, pre rolled cones, and milled cannabis. An unprecedented website will allow growers real-time updates on the status of their product and the product will be ready to send to retailers rapidly.

Other co-packing companies often deploy predatory contracts to lock growers into long-term commitments, profit-share schemes, and ultimately loss of control of their product and profit. Rogue Processing offers growers a sustainable business model that allows them to maintain control of their product and brand for a low-cost per unit service fee.

President & CEO of Rogue Processing, Graham Taylor, created Rogue Processing with growers in mind. Taylor says, "Rogue's website will communicate all steps of the processing procedure to all appropriate stakeholders". Growers need only provide the cannabis and the necessary information and Rogue Processing will then handle all the work.

Retailers also benefit from Rogue Processing's system. Retailers will receive:

- Rapid Purchase Order Filling
- Shipping Notifications & Order Tracking
- High-End, Enhanced Shelf Life, Sustainable Packaging Infused with Nitrogen

Purchasers of cannabis packaged by Rogue Processing will be getting the freshest product possible due to reduced shipping times and a pull-top metal can.

Rogue Processing will be the premier cannabis packaging partner in Canada. President/CEO Graham Taylor received a first-place finish at the 2022 Stu Clark New Venture Championships: Graduate business plan competition. Taylor is the first University of Manitoba student since 2008 to place first in any of the competition's categories. Taylor competed against 16 teams who were selected out of more than 50 submissions. <https://rogueprocessing.com/>
