# INTEGRATION
Improved Efficiencies. Enhanced Experiences.

PSCU Integration Delivers an Optimized Operational Environment

Digital technology allows companies in every industry to perform functions and achieve service goals that were only pipe dreams a couple of decades ago. Yet there is no guarantee that hardware, software, or architectural configuration will easily come together to provide promised benefits. PSCU integration service chooses the right solutions from leading technology vendors, then configures and connects the proper components in all the right ways. The result is efficiency that improves profitability and assures better interactive experiences for credit union staff and members alike.

Unified Functionality

PSCU uses multiple tools like APIs, SSO and File Batch Processing, and then strategically partners with credit unions and their chosen vendors to provide industry-leading Integration services. (An example would be an API that works with the credit union's core processor, their mobile banking provider, and PSCU's Access Point so the credit union's members can view credit card transactions within their credit union mobile banking app.)

PSCU's member-facing integration solutions include: Access Point for credit cards, Bill Pay PayLynx RXP, Bill Pay PayLynx Payment Manager, and Rewards.

API solutions include: Data eXchange and Bill Pay.

Back office & support integration solutions include: QuickAssist, TMC core interfaces.

Currently, PSCU Integration is facilitating integration points with applications from such well-known third-party organizations as Jack Henry, Symitar, Fiserv DNA, Digital Insight … and others.

INTEGRATION
Improved Efficiencies. Enhanced Experiences.

What Sets PSCU Integration Apart

Vendor-Agnostic API Architecture
Cost-effective functionality guides development of our APIs, core processor interfaces, and SSO packages, enabling reliable vendor collaboration.

Better Systems Ensure Better Service
PSCU integration provides operational agility and speed to create an experience that thoughtfully connects credit union members to their products.

Stronger Partnerships, Deeper Integration
PSCU leverages long-standing relationships with top technology vendors so we can develop the best integrated solutions for credit unions.

Tenured, Skilled PSCU Resources
PSCU has successfully completed integration projects with over 300 credit unions across many industry-leading cores and systems. Our skilled Integration team has been optimizing integrations for almost 20 years.

Pricing Value Leads to Competitive Advantages
PSCU offers a variety of pricing models, including per-transaction, flat-rate or tiered, depending on the needs of the credit union.

Coming Soon! API Developer Portal with RESTful API Services

RESTful API services are increasingly being selected when the goal is a higher degree of interactivity. In addition to interface technology based on an XML platform for APIs (notably Data eXchange and Bill Pay), PSCU Integration will soon offer the RESTful technology standard for API development, to be made available through a new API Developer Portal.

Let PSCU Integration provide your credit union with all the key elements, architectural design assistance, and advanced APIs to meet business needs and member expectations!
