NEW INSTALLATIONS

For residential and commercial properties, a single visit to your property or review of your blueprints allows us to conduct a comprehensive security evaluation. Identifying key areas of concern enables us to develop a personalized security strategy that aligns with your specific needs and property characteristics.

WE CUSTOMIZE EACH PROTECTION PLAN TO SUIT YOUR SPECIFIC NEEDS.

Each property assessment and customized system strategy starts with a core principle and evolves from that point.

Our security plans all start with a foundational structure we call the "basic system." Despite its title, this configuration involves securing vital entry points like exterior doors and enhancing them with motion sensors to protect windows and glass. From this basic framework we then engineer the system to your needs based on your concerns and the structure.

Most of our clients choose this "basic" system because it suits the lifestyle of numerous contemporary homeowners who are usually away during the day, making them most vulnerable, and provides ample protection when they are on vacation.

OUR SOLUTION

We provide a variety of solutions tailored to your needs, some of which our competitors may not be aware of. By staying updated on technological advancements and product innovations, we can offer our customers state-of-the-art technology to meet their requirements successfully. We aren't stuck in the past like most companies using antiquated and dated equipment and practices.

We are currently expanding AI solutions into our security equipment offerings enabling us to offer remarkable features that were once exclusive to casinos, banks, and government facilities and at a very reasonable cost.

WHY US ?

We strive to exhibit our dedication through deeds rather than mere words. By attentively listening to your requirements and tailoring our methods to suit your distinct security needs, we demonstrate our commitment to your protection.

Additionally, we utilize dependable equipment that evolves with emerging technologies, avoiding fleeting trends that necessitate costly upgrades to access the latest features. Our equipment is engineered to deliver years of reliable performance, needing minimal maintenance and service.
