

# Be Selective

**Target complete gut health.**

A healthy gut means much more than protecting your herd against potentially deadly issues such as HBS; it means maintaining the right levels of beneficial bacteria in both the rumen and lower digestive tract to improve performance and reduce the need for therapeutic treatments.

Select GH can be used at anytime to maintain a healthy gut, and can be effective:

- feeding ensiled forages
- milk production is reduced
- fertility is poor
- cows are scouring
- during times of increased stress, i.e., transition period
- somatic cell counts are elevated
- signs of HBS are present
- there are signs of gastrointestinal infections
- signs of variable manure syndrome are noticed

**Select**  **GH<sup>®</sup> A<sup>+</sup>**

**Complete Gut Health**

 **Altech<sup>®</sup>**

# Select here: The **ISSUES** that you are seeing on the farm!

- Dry matter intake variance
- Reduced performance
- Poor fertility
- Inconsistent manure
- Dark/bloody manure
- Reduced milk production
- Poor quality forage
- Signs of mold/yeast in feed
- Signs of immune suppression
- Sudden death
- Loss of Appetite
- Bloating
- Signs of abdominal pain
- Constipation

## Usage Rate:

- Maintenance dose:  
20g/head/day
- Usage dose:  
20-50g/head/day depending  
on challenge level
