

Water — How It Works & Why It Matters

How Our Water System Works

All the water you use—showers, sinks, dishes, laundry—comes from a delivered supply stored in our cistern (**water tank**). When the tank runs low, a **diesel truck** must drive out to refill it.

Small efforts inside make a real difference outside.

Why Thoughtful Water Use Matters

Think of the cistern like a **shared pantry**. It's well stocked, but it's finite. Using water thoughtfully helps reduce diesel use, air pollution and **truck trips**.

Easy Ways Guests Naturally Help

- Enjoying shorter showers
- Turning off the tap while brushing teeth
- Running the dishwasher full and on Auto mode
- Letting us know about drips or leaks

No rules. No pressure. Just awareness.

A Shared Effort in a Special Place

If you pause before turning on the tap, you're already doing it right.

Thank you for helping keep Alaska clean and beautiful for everyone who visits.
