VIBFEM SUPER GRADER

VIBFEM has more than 25 years of global experience in developing solutions for application oriented, higher deliverables screeners. VIBFEM Australia works on unwavering drive for improvement of process and product. As a pursuit in this direction VIBFEM introduces Super Grader which is the most optimised grader for screening sugar particles. VIBFEM Super Grader has higher specific screening capacity due to proper angle of screen deck, in addition to linear motion created by two out of balance motors, fine decks are direct excited by side mounted variable frequency exciters. Hybrid motion gives optimised results in sugar screening. Proper distribution of material over the width is ensured by spreader feeder mounted on top of the screen. Even distribution results in optimisation of tonnage and efficiency of the Super Grader. Spreader feeder for even distribution over width. For lower fine decks direct excitation is provided for more efficiency in screening and have clog free operations.

Spreader feeder for even distribution over width.

Side mounted Variable frequency vibrators for direct excitation.

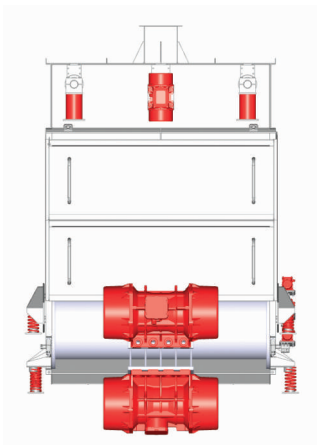

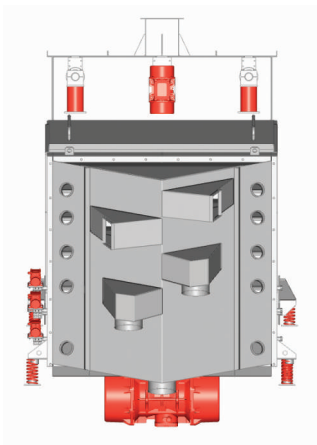

VIBFEM Super Grader is custom designed as per project requirement.

In Sugar Rori , L, M, S can be efficiently classified by VIBFEM Super Grader. Below are options for VIBFEM Super Grader

TECHNICAL SPECIFICATION

Tonnage Tons per Hour	Size		No of Decks
	Width mm	Length mm	
15	1000	3000	5
25	1250	4000	5
30	1500	4000	5
35	2000	4000	5

No of decks and size can be customised as per project need, please contact VIBFEM for more.
