7. Description of the project (3000 characters limit)

   The Biodiversity Rangers are intended to foster relationships with the communities of the Kitikmeot region in Nunavut, and help members of the communities conceive, develop and receive support for community-driven research while assisting Polar Knowledge Canada (POLAR) with baseline environmental monitoring. Science activities of the Rangers will include biological sample collection, collaboration with hunters and trappers, observations of "new" species, changes in landscape due to thawing permafrost and gauging/recording community concerns with respect to the local environment and beyond. The Rangers will serve an important role in connecting POLAR, as part of the Government of Canada, with communities in the Kitikmeot region.
   Full training and technical support will be provided for all Biodiversity Rangers. Elders, youth, and community members will all be involved from the outset, enabling consideration of local environmental knowledge and participation of community members throughout the projects.
   Examples of specific tasks:
   1) Operate and maintain sampling equipment such as malaise traps to collect a range of insects and other invertebrates on a weekly basis as well as lichens, mosses and plants in each of the local community areas
