ASM2 Project Deliverable Update

Submitting Country/Organization Canada

1. Project Title (150 character limit)

   Canadian Rangers Ocean Watch (CROW)

2. Funding Program(s) and/or Organization(s)

3. Coordinating organization(s)

   Fisheries and Oceans Canada, Institute of Ocean Sciences. Department of National Defence .

4. Name of main contact person

   Dr. Bill Williams

5. Contact email address

6. Summary of Project/Project Goal (300 character limit)

   Since 2011, the Canadian Rangers Ocean Watch programme combines the skills and expertise of local people and scientists to collect measurements of wintertime oceanographic conditions under the sea ice of the Canadian Arctic and levers the unmatched skills and knowledge of the Canadian Ranger Patrols in communities along the Northwest Passage.

7. Description of the project (3000 characters limit)

   The CROW program is a collaboration between DFO and DND to collect measurements of wintertime oceanographic conditions under the sea ice of the Canadian Arctic. The CROW program is an excellent example of collaboration with northern communities, combining the skills and expertise of local people and DFO scientists. This work has led to collaborations with the Canadian High Arctic Research Station, Vancouver Aquarium's Ikaarvik Program, Ocean Networks Canada Arctic Observatory, and the University of Alaska's Coastal Community Ocean Observers Network.
   The program has been on-going since 2011 and levers the unmatched skills and knowledge of the Canadian Ranger Patrols in communities along the Northwest Passage. During routine wintertime patrols, the Rangers deploy instruments through holes drilled in the ice at pre-assigned locations to measure snow and ice thickness, profiles of salinity, temperature, dissolved oxygen and chlorophyll fluorescence and collect zooplankton samples.
   These data are important because they are one of the only sources of wintertime oceanographic data in the Canadian Arctic. It is efficient to collect these measurements with the CROW program. Other logistical options involve deploying science team aboard expensive icebreakers, which struggle in the wintertime landfast ice, or aboard Twin Otter aircraft on skis, which requires good flying

- ☐ Natural sciences
- ☐ Social sciences
- ☐ Arts & Humanities
- ☐ Indigenous Knowledge
- ☐ Community-driven research/monitoring
- ☐ Education/Capacity Building
- ☐ Outreach

20. If this Deliverable/Project was submitted for ASM1, which theme does it most closely relate to? *(Choose one)*

- ☐ Identifying Arctic-Science Challenges and Their Regional and Global Implications
- ☐ Strengthening and Integrating Arctic Observations and Data Sharing
- ☐ Applying Expanded Scientific Understanding of the Arctic to Build Regional Resilience and to Shape Global Responses
- ☐ Empowering Citizens through Science Technology, Engineering, and Mathematics (STEM) Education Leveraging Arctic Science
- ☐ Not submitted to ASM1 / Do not know

21. As this Project/Deliverable was submitted as a contribution to support the goals of the ASM2 Joint Statement, which areas does it specifically address? *(Choose up to 3)*

- ☐ Theme 1: Strengthening, Integrating and Sustaining Arctic Observations, Facilitating Access to Arctic Data, and Sharing Arctic Research Infrastructure
  - ☐ Move from design to deployment phase of an integrated Arctic observing system
    - ☐ Sustained Arctic Observing Networks (SAON)
    - ☐ Copernicus
    - ☐ Svalbard Integrated Arctic Earth Observing System (SIOS)
    - ☐ Distributed Biological Observatory (DBO)
    - ☐ Other observing system:
  - ☐ Enhance cooperation among space agencies
  - ☐ Cooperate in facilitating international access to Arctic Research Infrastructure
  - ☐ Make Arctic research and monitoring datasets available, discoverable and relevant for communities
  - ☐ Explore new technologies for unmanned observing systems and remote sensing

- ☐ Theme 2: Understanding Regional and Global Dynamics of Arctic Change
  - ☐ Enhance international cooperation
    - ☐ Year of Polar Prediction (YOPP)
    - ☐ Multidisciplinary Drifting Observatory for the Study of Arctic Change (MOSAiC)
    - ☐ Increase predictive capabilities for Arctic weather and climate
    - ☐ Improve confidence in predications for future Arctic changes
  - ☐ Promote voluntary international cooperation
    - ☐ Predicting sea-ice changes
    - ☐ Understanding the impact of changes on freshwater, terrestrial and marine ecosystems
    - ☐ Assessing the stability of permafrost
    - ☐ Better predicting the dynamics of ice sheets, glaciers and ice caps and their ocean connections
    - ☐ Understanding social and economic drivers of Arctic change

- ☐ Theme 3: Assessing Vulnerability and Building Resilience of Arctic Environments and Societies
  - ☐ Enhance multilateral scientific cooperation between Arctic and non-Arctic States, Indigenous Peoples, local communities, and societal and economic stakeholders
    - ☐ Identifying risks and minimizing the impacts of climate and global changes on the Arctic
    - ☐ Developing adaptation and resilience-building strategies
    - ☐ Developing activities that address the sustainability of new Arctic opportunities
  - ☐ Develop and integrate in the Arctic region services making use of climate information
  - ☐ Develop and disseminate best practices for coping with impacts of Arctic change
  - ☐ Develop research and educational programs to support Indigenous languages, cultural and economic practices, sustainable ways of living, and heritage resource preservation

22. In addition to the specific scientific topics mentioned in the ASM2 Joint Statement (identified in the question above), several additional points were agreed to as important. Does this project relate to any of these points identified in the statement? If so, please check the relevant points and include a summary of what was done in the project to address the point(s) in less than 250 words in the space below:

    - ☐ Striving for diversity - also of gender - and inclusiveness in Arctic science, recognizing that cultivating talent and promoting excellence across the social spectrum will lead to better problem solving and innovative solutions to Arctic scientific challenges
    - ☐ Acknowledging that, where appropriate, research in the Arctic has to be carried out - in compliance with national and sovereignties and jurisdictions - respecting the values, interests, priorities, culture and traditions of Arctic Indigenous Peoples and local communities
    - ☐ Including Indigenous Peoples in the assessment and definition of Arctic research priorities
    - ☐ Involving local communities

    Progress made (1500 character limit):

23. Is this Deliverable/Project also being submitted toward the goals of ASM3? If so, which theme[1] does it most closely relate. *(Choose one)*

    - ☐ Theme 1: Observe
      Observing networks, Data sharing – towards implementation
    - ☐ Theme 2: Understand
      Enhance understanding and prediction capability on Arctic environmental and social systems and its global impact.
    - ☐ Theme 3: Respond
      Sustainable development, Evaluation of vulnerability and resiliency, Application of knowledge
    - ☐ Theme 4: Strengthen
      Capacity building, Education, Networking, Resilience – prepare future generations

24. Was this project/deliverable created specifically for / or as direct result of Arctic Science Ministerial Meetings?
    - ☐ Yes
    - ☐ No

[1] Draft themes as of 10 April. The specific wording of subtitles may change but the overall concepts of Observe, Understand, Respond and Strengthen will remain.
