   The WMO is in the very early stages of implementing an Arctic Regional Climate Centre (ArcRCC) to provide climate scale (monthly and seasonal) information for temperature, precipitation and sea-ice for all of the circumpolar Arctic.

7. Description of the project (3000 characters limit)

   The World Meteorological Organization (WMO) has established Regional Climate Centres in many areas of the globe to fill geographical and service gaps in climate information, and improve collaboration and integration amongst National Meteorological and Ice Services. The WMO is in the very early stages of implementing an Arctic Regional Climate Centre (ArcRCC) to provide climate scale (monthly and seasonal) information for temperature, precipitation and sea-ice for all of the circumpolar Arctic. It will develop and deliver improved climate products and services in response to the defined needs of Arctic clients and stakeholders for climate information in support of decision-making.

   The reach of the ArcRCC falls across three WMO Regional Associations and the responsibilities have been divided into the following nodes: North American (Canada-ECCC and USA-NOAA) with Canada as the lead; Northern Europe and Greenland (Denmark, Finland, Iceland, Norway, and Sweden) with Norway as the lead; and Northern Eurasian with the Russia Federation as the lead. Each node lead will also undertake a significant cross-node function towards the delivery of mandatory (temperature and precipitation) and highly recommended (sea-ice) products and services across the entire pan-Arctic domain, i.e., Canada will
