6. Summary of Project/Project Goal (300 character limit)

   The EU has committed 28 million Euro for projects dealing with the topics of Polar Climate, GEOSS Initiatives in the Arctic Region, and Coordination of European Polar research.

7. Description of the project (3000 characters limit)

   a) Polar climate: there is a need of developing innovative approaches to assess the key physical and chemical processes in the ocean and atmosphere and the key ocean-atmosphere-ice interactions in order to improve predictions of future polar and global climate. Understanding the polar processes in a global context will benefit the people, policy and businesses well beyond the Polar Regions.
   b) GEOSS Initiatives in the Arctic Region: there is a need of developing coordinated Earth observations and information services specifically targeting this region, also building on the essential contribution of indigenous knowledge and community-based monitoring systems. The aim is to contribute to operationalise an integrated pan-Arctic Observing System. Specific strategies will be requested to coordinate with projects stemming from other major national and international Arctic observing initiatives.
   c) Coordination of European Polar research: there is a need to provide a platform to co-develop the strategies to advance and further coordinate the European Polar Research action and its contribution to the policy-making processes. A special focus should be placed on supporting the implementation of sustained observation systems in the Arctic and Antarctic by setting up and sustaining a European coordination office.
