   The changing cryosphere: uncertainties, risks and opportunities" will provide 41,0 Million Euro for the following subjects: sea-level changes, changes in Arctic biodiversity, sustainable opportunities in a changing Arctic and Arctic standards.

7. Description of the project (3000 characters limit)

   in the Work Programme 2018-2020 of Horizon 2020, the EU published a call for proposals on the following subjects:
   a) Sea-level changes: Actions should assess the processes controlling changes to global ice mass balance - including ice dynamics - such as ice shelf-ocean and sea-ice interactions, surface components, effects of crustal de-loading (Glacial Isostatic Adjustments) on relative sea-level changes and/or gravitational effects of ice mass changes on the spatial patterns of sea-level changes. Actions should assess the status of ice sheets and glaciers, report on how their changes are likely to affect future sea-levels, and increase confidence in predicting changes in the cryosphere including through better representation of poorly represented processes. Actions should also analyse low-probability high-impact scenarios including those associated with the collapse of ice sheets (sea-level fingerprints). Actions may be focused on specific issues which substantially contribute to sea-level changes and to the assessment of the associated major risks to and impacts on coastal communities, coastal ecosystems and critical infrastructure across the globe.
   b) Changes in Arctic biodiversity: Actions should identify and analyse major drivers and implications of changing biodiversity in the Arctic, such as the role of invasive species, and how vulnerable land and/or marine ecosystems are with respect to combined human and natural influences. Actions should assess the ecosystems' responses to both external and internal factors and how these
