6. Summary of Project/Project Goal (300 character limit)

   Norway has two projects looking at abrupt changes in the Arctic Cryosphere by investigating interactions between Arctic sea ice cover and the sensitivity of the Greenland Ice Sheet.

7. Description of the project (3000 characters limit)

   The project studies the sensitivity of the Greenland Ice Sheet to changes in the ambient sea ice cover, and the sensitivity of Arctic sea ice cover to past and future climate changes. In the project detailed analyses of the relationship between global warming and sea ice cover is conducted and the role of changes in ocean circulation and stability of the sea ice cover is performed. ice2ice is also affiliated with EASTGRIP - the multinational campaign to drill through an active ice-stream in NE Greenland, likely the most sensitive area of the ice sheet. There are important knowledge gaps in our understanding of these most active elements in the mass balance of the ice sheets.
