6. Summary of Project/Project Goal (300 character limit)

   The Saami Nomadic Herders project is developing research methods and skills to conserve species, enhance biological diversity and reduce pasture degradation in reindeer hearding regions globally, while sustaining resilience of ecosystems and livelihoods of reindeer herding communities.

7. Description of the project (3000 characters limit)

   Arctic and sub-Arctic environment, climate and biodiversity is changing in ways unprecedented in our long histories in the north, challenging traditional ways of life, human well-being, food security, and constitutes a legitimate concern for the future of traditional indigenous livelihoods.
   Nomadic Herders is a research project which take actively indigenous peoples knowledge in use, by providing research training and participation of indigenous peoples youth. With these perspectives, we aim to increase the capacity of Arctic indigenous youth in engaging in processes concerning the conservation and sustainable use of biodiversity and landscapes, as well as the role of traditional knowledge in environmental governance of Arctic ecosystems.
   By building capacity among indigenous youth in the circumpolar north, this project facilitates enhanced participation in Arctic Council projects. The main objective of this project is to develop research methods and skills to conserve species, enhance the biological diversity and reduce pasture degradation in reindeer herding region globally, while sustaining resilience of ecosystems and livelihoods of reindeer herding communities. A central goal is to strengthen the role of indigenous peoples in nature protection and improve the long-term well-being of reindeer herders. Indigenous peoples and their traditional knowledge play a central and integral
