6. Summary of Project/Project Goal (300 character limit)

   The US National Environmental Satellite, Data, and Information Service (NESDIS) Arctic mission is to provide data for monitoring, observing, analysis, archiving, and prediction of Arctic waters, land, and atmosphere.

7. Description of the project (3000 characters limit)

   The NESDIS Mission is to provide secure and timely access to global environmental data and information from satellites and other sources to promote and protect the Nation's security, environment, economy, and quality of life. With respect to the Arctic, NESDIS provides data for monitoring, observing, analysis, archiving, and prediction of Arctic waters, land, and atmosphere. The following NESDIS activities are ongoing and completed efforts that are conducted in relationship with YOPP:
   o Delivery and evaluation of imagery and products from the GOES 16 and GOES 17 satellites. New science and applications from the next generation (GOES R) series geostationary constellation with greater spectral, spatial, and temporal resolution. New ice (Concentrations, Thickness, and Surface Temperatures) and imagery products are in development and are expected for operational delivery by the last quarter of FY18.
   o Operational production, distribution, and utility of Joint Polar Satellite System (JPSS) products. The JPSS is the Nation's new generation polar-orbiting operational environmental satellite system consisting of the Suomi National Polar-orbiting Partnership (SNPP) and the recently launched NOAA-20. The coverage and spectrum allows for advanced Arctic observations from imagery and products. Most products are currently available or are in the process of being integrated into weather/ocean monitoring and
