7. Description of the project (3000 characters limit)

   Published annually since 2006, the Arctic Report Card describes the state of the Arctic environmental system each year. It is intended for a wide audience, including scientists, teachers, students, decision-makers, and the general public interested in the Arctic environment and science. Since the White House Arctic Science Ministerial in September 2016, Arctic Report Cards were published in December of 2016 and 2017. The Arctic Report Card is organized into three sections: Vital Signs, Indicators, and Frostbites. The Vital Signs section is for annual updates on the same seven topics: Surface Air Temperature; Terrestrial Snow Cover; Greenland Ice Sheet; Sea Ice; Sea Surface Temperature; Arctic Ocean Primary Productivity; and Tundra Greenness. The Indicators section is for topics that will be updated every 2-4 years, many of which have appeared in previous Arctic Report Cards, e.g., Fisheries, Permafrost, Ocean Acidification, Glaciers and Ice Caps, to name a few. The Frostbites section is for reports on new and newsworthy items, describing emerging issues, and addressing topics that relate to long-term scientific observations in the Arctic. The report is typically released at the Fall American Geophysical Union meeting in December and in recent years has received a great deal of media attention. Since the release of the 12th report in December of 2017, there have been nearly 20,000 page views of the Arctic Report Card website.
