

Balloon Care Guidet

Thank you for your purchase from Events by Sadie. Please see below some general rules of care and guideline to help your balloons last longer!

Please feel free to contact us with any questions or concerns you may have.

- Keep balloons at room temperature. Do not store in a cold room, for example a garage. Balloons will slightly deflate in the cold. In some cases they will re fill when they warm up again.
- Do not place in direct sunlight – balloons may pop.
- All balloon stacks come with a water weight on the bottom. Be careful when transporting and also when popping after use.
- Handle with care. keep away from sharp objects
- keep away from lit candles, hot radiators and fireplaces
- Do not leave in a vehicle for too long
- Do not release helium balloons – pop and dispose of them properly
- When loading into a car, seats must be down and balloons lay flat with any foil balloons facing upwards

Thank you!
