Lido Key Dune Project -January 15, 2022

Review of US Army Corps Project Benefits of Adding Dunes Review of Proposed Dune Concept Next Steps

Presentation to LKRA

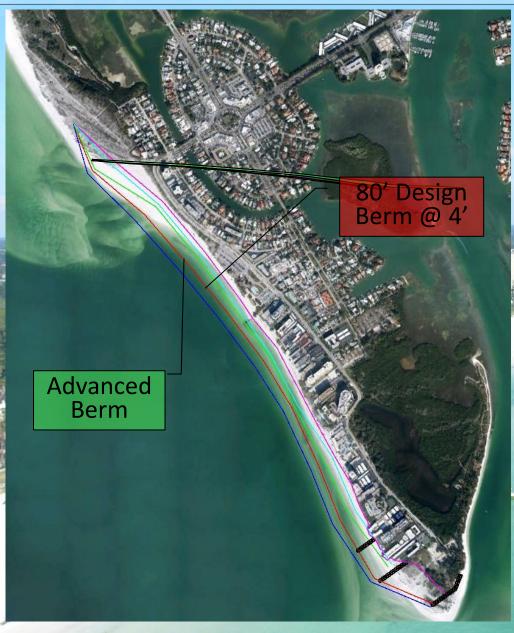

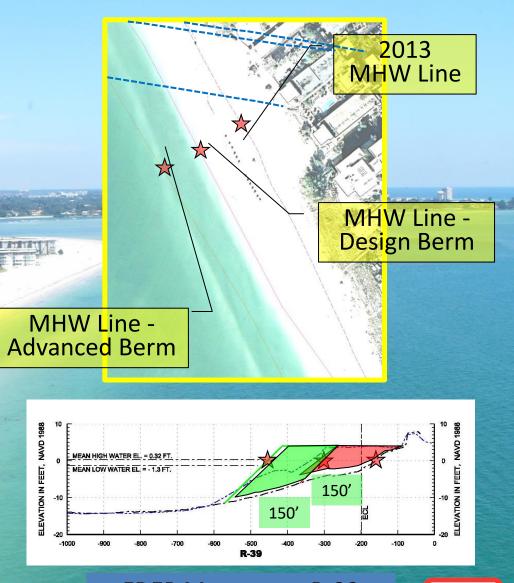

LIDO KEY, CITY OF SARASOTA, FLORIDA HURRICANE AND STORM DAMAGE REDUCTION PROJECT

PLACEMENT – LIDO KEY

FDEP Monument R-39 (Lime Tree US ARMY COR BESPIEL GONDARS) Jacksonville District

BUILDING STRONG®

TAYLOR ENGINEERING, INC.

Why Add a Dune:

Provides higher level of storm protection

Enhances coastal ecosystem

Traps wind transport and increases sand volume

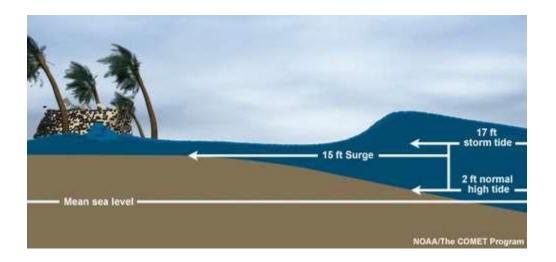

Design Considerations: Height of Dune

FEMA Dune Erosion-Frequency Relationship (2005)

Return Period (yrs)	Dune Volume (cy/ft)	
5	6	
10	8	
25	12	
50	15	
100	20	

Longboat Key Still Water Levels by Return Period

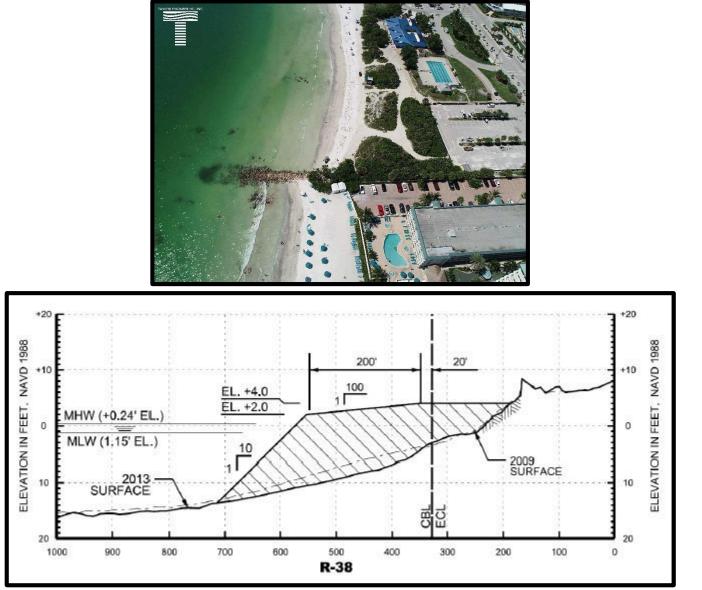

Return Period (yrs)	Still Water Surface Elevation (ft NAVD)	
5	+2.8	
10	+4.4	
25	+6.6	
50	+8.3	
100	+9.9	

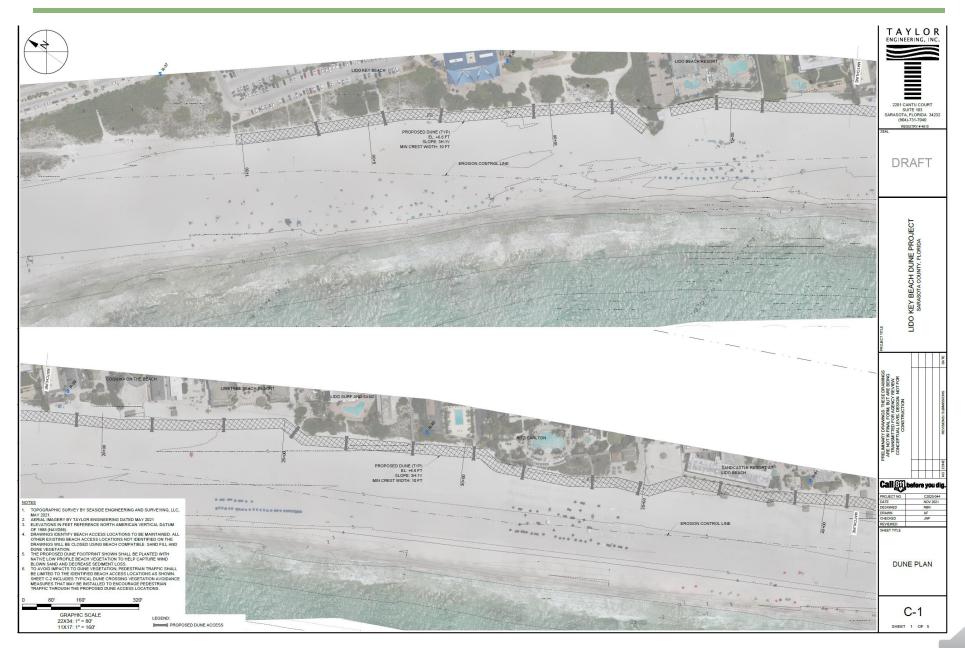

Design Considerations: ECL Location

Design Considerations: ECL Location

110

Design Considerations: ECL Location

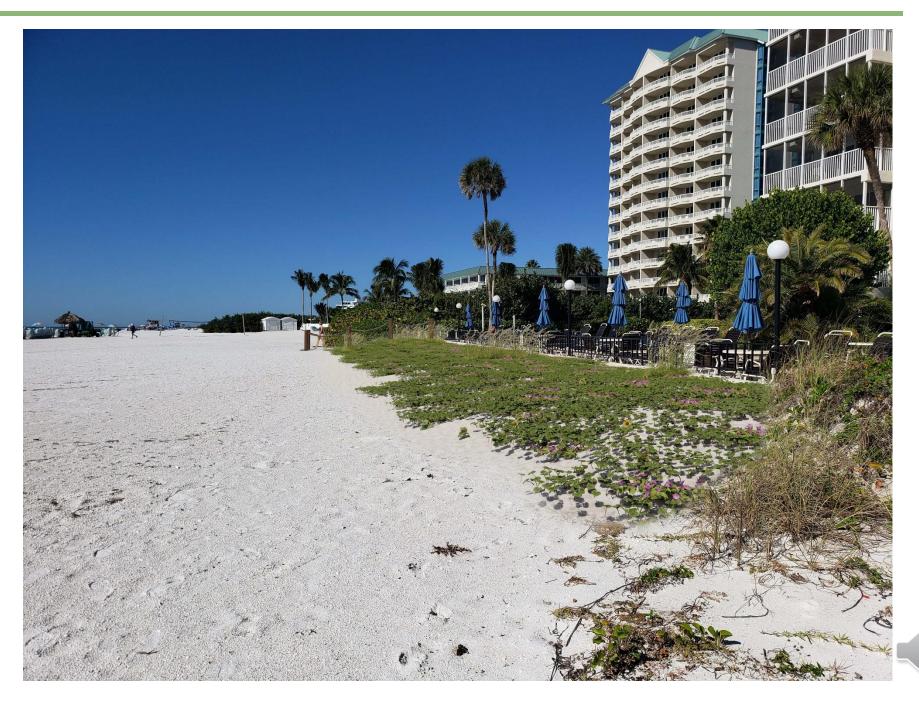

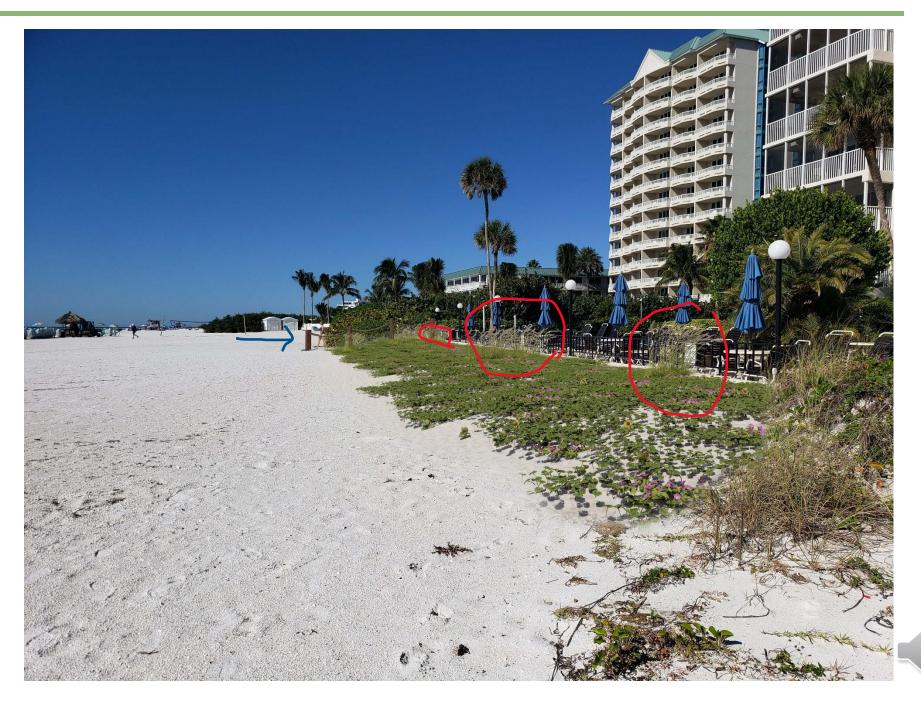

Design Considerations: Before

Design Considerations: After

Design Considerations: After

Plant Selection

Dune Sunflower – Mature height less than 2 feet

Blanketflower Gaillardia – Mature height 12-18 inches

Sea Oats – Mature height typically a few feet.

Railroad Vine -Mature height 2-6 inches

Walkways

What Next:

Continue with outreach, review details with owners and get support for concept.

Once Concept is approved – final design and permitting would begin

(approx. a 4-month process)

After the permit is approved, the project could go out for bid (3 months)

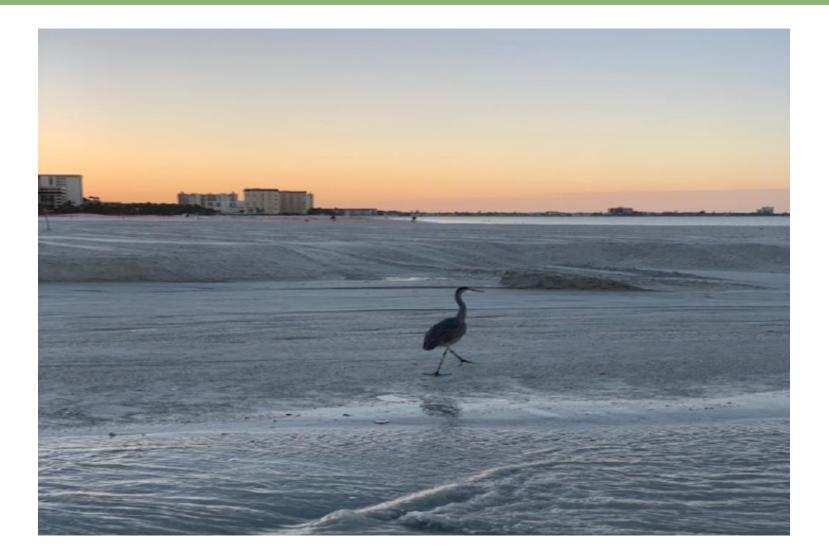

Construction would start after that and take about 2-3 months.

The permit process may include construction parameters so a final proposed timeline will be developed after input from FDEP.

Questions

Design Considerations: Storm Surge

Storm	Date	Location	Surge (ft NAVD)
Hurricane Gabrielle	Sept 14, 2001	Venice	6
Hurricane Charley	Aug 13, 2004	Punta Gorda	10-13
TS Fay	Aug 19, 2008	Naples	1-2
TS Emily	July 31, 2017	LBK	1.5-2.0
Hurricane Irma	Sept 10-11, 2017	SWF	1.5
